Our Beautiful Moon and its Mysterious Magnetism Mike Fuller,2013-09-24 This book is a summary of the history of discovering the moon. The author has been involved in the Apollo program, working with its samples and this book covers these efforts. It describes the analysis methods of lunar samples and their interpretation to understand lunar paleomagnetism. The book has adopted an historical approach throughout, tracing the development of the ideas of the Earth-moon system, of the birth of the space age, of paleomagnetism and finally of lunar magnetism and its evidence for an early lunar dynamo.

Tetrascroll R. Buckminster Fuller,1982-06-15 A series of twenty-one original triangular lithographs (with narrative captions) which may be displayed in a helical scroll of linked tetrahedra. They were executed during the years 1975 and 1976 under the guiding light of Tatyana Grosman (to whom Fuller had been introduced by Edwin Schlossberg) at her ULAE print workshop in West Islip, Long Island. In something of a publishing innovation this trade book was brought out concurrently with a limited edition of the signed original lithographs. Michael Denny was the editorial impresario at St. Martin's and Ronald Feldman Fine Arts handled the exhibition of the lithographs. Fuller composed the Tetrascroll between the publication of *Synergetics* in 1975 and *Synergetics 2* in 1979. He had been frustrated by the rigid structure of the synergetics books which, despite certain advantages, he felt robbed the work of spontaneity and narrative force. To compensate for this Fuller worked feverishly on the Tetrascroll as a free-form obbligator to the synergetics books. He explained to me at the time, The empirical, the scientific way to present the argument of synergetics is the way I am doing it in *Goldilocks*. Happy Chaos Soleil Moon Frye,2011-08-23 From Punky to parenting, Soleil Moon Frye shares insightful, realistic, in-the-trenches parenting advice, inspiration, and fun. Enthusiastic, spunky, and positive, Punky Brewster was the quintessential eighties kid. Nearly thirty years later, Soleil Moon Frye-the adorable girl who played her on TV-is all grown up. Now she's a married mom of two, an entrepreneur who parlayed her successful kids' clothing line into a partnership with Target, and a social media whiz with millions of followers. Many of the same girls who watched Soleil on television are now grown up with children of their own, too, and they look to her as a go-to source for realistic, in-the-trenches parenting advice, inspiration, and fun. Happy Chaos invites those women into Soleil's world, and makes them revel in the chaos of their own lives, too. Soleil believes that happy chaos is the sign of a family operating at its best-when parents accept that they'll make mistakes, that there will be messes, tears and skinned knees. She learned to love a jumbled life during her own childhood, when her own mom created an atmosphere that was thoroughly unconventional. Their house in Los Angeles was a haven for many young stars of Soleil's generation, often far from home and looking for a safe place to hang out. In this book, she shows how her happy but chaotic childhood informed her parenting: Each chapter begins with a telling reminiscence before moving into insightful advice and fun stories about life with her husband and two adorable daughters.

Me and the Biospheres John Polk Allen,2009 Synergetic Press is proud to announce the long-awaited release of *Me and the Biospheres: A Memoir by the Inventor of Biosphere 2*, the definitive autobiography of one of the most luminous minds of our time. Accomplished poet, philosopher, inventor and total systems scientist, John Allen is a charming and engaging guide to how the world's largest laboratory for global ecology ever built came to be. Anyone suffering from the Global Warming Blues will cherish this uplifting account of the most ambitious environmental experiment ever undertaken. Biosphere 2, a world under glass, covered three acres of Arizona desert. Contained within a magnificently designed air-tight, sealed glass and steel framed architectural setting were models of seven biomes: an ocean with coral reef, marsh, rainforest, savannah, desert, farm and a micro-city. Eight people lived inside this structure for two years (1991-1993) setting world records in human life support, monitoring their impact on the environment, while providing crucial data for future manned missions into outer space. John Allen prepared for the manifestation of Biosphere 2 by assembling many smaller projects: the creation of a ferro-cement hulled ship to study ocean and river ecologies and cultures; the development of a rainforest enrichment project, a theater group, world-class art gallery and more. As awe inspiring as the great cathedrals, Biosphere 2's building and operation demanded the efforts of the most diverse team of scientists, engineers, artists and thinkers from around the world with whom John Allen worked closely for decades. His memoir is a rich and complex narrative, filled with rollicking adventure, exceptional camaraderie and mind-bending science, lavishly illustrated with nearly four hundred photographs. *Me and the Biospheres* is a passionate call to reawaken to the beauty of our peerless home, Biosphere 1, the Earth.

The Grid Book Hannah B Higgins,2009-01-23 Ten grids that changed the world: the emergence and evolution of the most prominent visual structure in Western culture. Emblematic of modernity, the grid is the underlying form of everything from skyscrapers and office cubicles to paintings by Mondrian and a piece of computer code. And yet, as Hannah Higgins makes clear in this engaging and evocative book, the grid has a history that long predates modernity; it is the most prominent visual structure in Western culture. In *The Grid Book*, Higgins examines the history of ten grids that changed the world: the brick, the tablet, the gridiron city plan, the map, musical notation, the ledger, the screen, moveable type, the manufactured box, and the net. Charting the evolution of each grid, from the Paleolithic brick of ancient Mesopotamia through the virtual connections of the Internet, Higgins demonstrates that once a grid is invented, it may bend, crumble, or shatter, but its organizing principle never disappears. The appearance of each grid was a watershed event. Brick, tablet, and city gridiron made possible sturdy housing, the standardization of language, and urban development. Maps, musical notation, financial ledgers, and moveable type promoted the organization of space, music, and time, international trade, and mass literacy. The screen of perspective painting heralded the science of the modern period, classical mechanics, and the screen arts, while the standardization of space made possible by the manufactured box suggested the purified box forms of industrial architecture and visual art. The net, the most ancient grid, made its first appearance in Stone Age Finland; today, the loose but clearly articulated networks of the World Wide Web suggest that we are in the middle of an emergent grid that is reshaping the world, as grids do, in its image.

The Language of Architecture Andrea Simitch, Val Warke, 2014-06-01 DIV Learning a new discipline is similar to learning a new language; in order to master the foundation of architecture, you must first master the basic building blocks of its language – the definitions, function, and usage. Language of Architecture provides students and professional architects with the basic elements of architectural design, divided into twenty-six easy-to-comprehend chapters. This visual reference includes an introductory, historical view of the elements, as well as an overview of how these elements can and have been used across multiple design disciplines./divDIV /divDIV Whether you're new to the field or have been an architect for years, you'll want to flip through the pages of this book throughout your career and use it as the go-to reference for inspiration, ideas, and reminders of how a strong knowledge of the basics allows for meaningful, memorable, and beautiful fashions that extend beyond trends./divDIV /divDIV This comprehensive learning tool is the one book you'll want as a staple in your library./divDIV /div

Invisible Sun Charles Stross, 2021-09-28 The alternate timelines of Charles Stross' Empire Games trilogy have never been so entangled than in Invisible Sun—the techno-thriller follow up to Dark State—as stakes escalate in a conflict that could spell extermination for humanity across all known timelines. An inter-timeline coup d'état gone awry. A renegade British monarch on the run through the streets of Berlin. And robotic alien invaders from a distant timeline flood through a wormhole, wreaking havoc in the USA. Can disgraced worldwalker Rita and her intertemporal extraordinaire agent of a mother neutralize the livewire contention before it's too late? Colonies in Space T. A. Heppenheimer, 2017-09-15 Is there life in space? Within the solar system, which we can reach and are now beginning to explore, the answer may be: Nothing but spores and bacteria. Perhaps the answer is: Nothing. Beyond our region of space the answer may yet be: Civilizations and cultures of greatness and magnificence untold. But we have not yet learned to detect them or to communicate with them. As this has become apparent there has been a reaction against many of the more utopian hopes associated with space flight. Less than fifteen years ago John Kennedy could commit the nation to explore this new ocean, with widespread hope that we were entering a new Age of Discovery. Today it is fashionable to believe that our problems can find solution only on earth and there is nothing in space which can aid us in any way. This is not so. If we cannot find planets fit for us to live on, or if Mars is not up to our fondest hopes - very well. We can take our own life into space. We can build colonies in space, as pleasant as we want and productive enough to markedly improve humanity's future prospects. And, we can begin to do this anytime we please.

Digital Apollo David A. Mindell, 2011-09-30 The incredible story of how human pilots and automated systems worked together to achieve the ultimate achievement in flight—the lunar landings of NASA's Apollo program As Apollo 11's Lunar Module descended toward the moon under automatic control, a program alarm in the guidance computer's software nearly caused a mission abort. Neil Armstrong responded by switching off the automatic mode and taking direct control. He stopped monitoring the computer and began flying the spacecraft, relying on skill to land it and earning praise for a triumph of human over machine. In Digital Apollo, engineer-historian David Mindell takes this famous moment as a starting point for an exploration of the relationship between humans and computers in the Apollo program. In each of the six Apollo landings, the astronaut in command seized control from the computer and landed with his hand on the stick. Mindell recounts the story of astronauts' desire to control their spacecraft in parallel with the history of the Apollo Guidance Computer. From the early days of aviation through the birth of spaceflight, test pilots and astronauts sought to be more than “spam in a can” despite the automatic controls, digital computers, and software developed by engineers. Digital Apollo examines the design and execution of each of the six Apollo moon landings, drawing on transcripts and data telemetry from the flights, astronaut interviews, and NASA's extensive archives. Mindell's exploration of how human pilots and automated systems worked together to achieve the ultimate in flight—a lunar landing—traces and reframes the debate over the future of humans and automation in space. The results have implications for any venture in which human roles seem threatened by automated systems, whether it is the work at our desktops or the future of exploration.

In the Bubble John Thackara, 2006-02-17 How to design a world in which we rely less on stuff, and more on people. We're filling up the world with technology and devices, but we've lost sight of an important question: What is this stuff for? What value does it add to our lives? So asks author John Thackara in his new book, In the Bubble: Designing for a Complex World. These are tough questions for the pushers of technology to answer. Our economic system is centered on technology, so it would be no small matter if tech ceased to be an end-in-itself in our daily lives. Technology is not going to go away, but the time to discuss the end it will serve is before we deploy it, not after. We need to ask what purpose will be served by the broadband communications, smart materials, wearable computing, and connected appliances that we're unleashing upon the world. We need to ask what impact all this stuff will have on our daily lives. Who will look after it, and how? In the Bubble is about a world based less on stuff and more on people. Thackara describes a transformation that is taking place now—not in a remote science fiction future; it's not about, as he puts it, the schlock of the new but about radical innovation already emerging in daily life. We are regaining respect for what people can do that technology can't. In the Bubble describes services designed to help people carry out daily activities in new ways. Many of these services involve technology—ranging from body implants to wide-bodied jets. But objects and systems play a supporting role in a people-centered world. The design focus is on services, not things. And new principles—above all, lightness—inform the way these services are designed and used. At the heart of In the Bubble is a belief, informed by a wealth of real-world examples, that ethics and responsibility can inform design decisions without impeding social and technical innovation.

Allies at Dieppe Will Fowler, 2012-06-20 In August 1942, the Allies launched a raid against the German-held port of Dieppe on the French channel coast. It was largely a disaster, with the Canadian forces bearing the brunt of the catastrophe. However, it wasn't all a failure, and history has tended to overlook the role of 4 Commando, who, along with their US Ranger counter-parts, landed and successfully disabled the German guns threatening the rest of the landings. Their actions proved an excellent demonstration of the military adage “train hard, fight easy” and showed the advantage of proper operational planning and brilliant leadership. This controversial raid also included members of the Free French and it was the first time US land forces engaged the Germans on mainland Europe. Set in the context of the Dieppe raid as a whole, Will Fowler studies the contribution of No. 4 Commando and Operation Cauldron, and evaluates how and why they achieved their objectives in this daring Commando raid of World War II.

Information Arts Stephen Wilson,2003-02-28 An introduction to the work and ideas of artists who use—and even influence—science and technology. A new breed of contemporary artist engages science and technology—not just to adopt the vocabulary and gizmos, but to explore and comment on the content, agendas, and possibilities. Indeed, proposes Stephen Wilson, the role of the artist is not only to interpret and to spread scientific knowledge, but to be an active partner in determining the direction of research. Years ago, C. P. Snow wrote about the two cultures of science and the humanities; these developments may finally help to change the outlook of those who view science and technology as separate from the general culture. In this rich compendium, Wilson offers the first comprehensive survey of international artists who incorporate concepts and research from mathematics, the physical sciences, biology, kinetics, telecommunications, and experimental digital systems such as artificial intelligence and ubiquitous computing. In addition to visual documentation and statements by the artists, Wilson examines relevant art-theoretical writings and explores emerging scientific and technological research likely to be culturally significant in the future. He also provides lists of resources including organizations, publications, conferences, museums, research centers, and Web sites.

Landscape as Infrastructure Pierre Belanger,2016-11-10 As ecology becomes the new engineering, the projection of landscape as infrastructure—the contemporary alignment of the disciplines of landscape architecture, civil engineering, and urban planning— has become pressing. Predominant challenges facing urban regions and territories today—including shifting climates, material flows, and population mobilities, are addressed and strategized here. Responding to the under-performance of master planning and over-exertion of technological systems at the end of twentieth century, this book argues for the strategic design of infrastructural ecologies, describing a synthetic landscape of living, biophysical systems that operate as urban infrastructures to shape and direct the future of urban economies and cultures into the 21st century. Pierre Bélanger is Associate Professor of Landscape Architecture and Co-Director of the Master in Design Studies Program at Harvard University’s Graduate School of Design. As part of the Department of Landscape Architecture and the Advansed Studies Program, Bélanger teaches and coordinates graduate courses on the convergence of ecology, infrastructure and urbanism in the interrelated fields of design, planning and engineering. Dr. Bélanger is author of the 35th edition of the Pamphlet Architecture Series from Princeton Architectural Press, GOING LIVE: from States to Systems (pa35.net), co-editor with Jennifer Sigler of the 39th issue of Harvard Design Magazine, Wet Matter, and co-author of the forthcoming volume ECOLOGIES OF POWER: Mapping Military Geographies & Logistical Landscapes of the U.S. Department of Defense. As a landscape architect and urbanist, he is the recipient of the 2008 Canada Prix de Rome in Architecture and the Curator for the Canada Pavilion ad Canadian Exhibition, EXTRACTION, at the 2016 Venice Architecture Biennale (extraction.ca).
