Your Strategy Needs a Strategy Martin Reeves,Knut Haanaes,2015-05-19 You think you have a winning strategy. But do you? Executives are bombarded with bestselling ideas and best practices for achieving competitive advantage, but many of these ideas and practices contradict each other. Should you aim to be big or fast? Should you create a blue ocean, be adaptive, play to win—or forget about a sustainable competitive advantage altogether? In a business environment that is changing faster and becoming more uncertain and complex almost by the day, it's never been more important—or more difficult—to choose the right approach to strategy. In this book, The Boston Consulting Group's Martin Reeves, Knut Haanaes, and Janmejaya Sinha offer a proven method to determine the strategy approach that is best for your company. They start by helping you assess your business environment—how unpredictable it is, how much power you have to change it, and how harsh it is—a critical component of getting strategy right. They show how existing strategy approaches sort into five categories—Be Big, Be Fast, Be First, Be the Orchestrator, or simply Be Viable—depending on the extent of predictability, malleability, and harshness. In-depth explanations of each of these approaches will provide critical insight to help you match your approach to strategy to your environment, determine when and how to execute each one, and avoid a potentially fatal

mismatch. Addressing your most pressing strategic challenges, you'll be able to answer questions such as: • What replaces planning when the annual cycle is obsolete? • When can we—and when should we—shape the game to our advantage? • How do we simultaneously implement different strategic approaches for different business units? • How do we manage the inherent contradictions in formulating and executing different strategies across multiple businesses and geographies? Until now, no book brings it all together and offers a practical tool for understanding which strategic approach to apply. Get started today.

Digital Resources for Learning Daniel Churchill, 2017-02-08 This book addresses the theory and practice of using digital resources for contemporary learning, and how such resources can be designed, developed, and employed in a variety of learning activities and with various devices. Drawing on insights into learning theory, educational research and the practical design of digital resources for learning that the author has gained over the past 20 years, the book provides the first classification guide to digital resources for learning and links various types of digital resources for learning to both contemporary curriculum design and learning design models.

Fluorescence In Situ Hybridization (FISH) - Application Guide Thomas Liehr, 2008-11-26 This book is a unique source of information on the present state of the exciting field of molecular cytogenetics and how it can be applied in research and diagnostics. The basic techniques of fluorescence in situ hybridization and primed in situ hybridization (PRINS) are outlined, the multiple approaches and probe sets that are now available for these techniques are described, and applications of them are presented in 36 chapters by authors from ten different countries around the world. The book not only provides the reader with basic and background knowledge on the topic, but also gives detailed protocols that show how molecular cytogenetics is currently performed by

specialists in this field. The FISH Application Guide initially provides an overview of the (historical) development of molecular cytogenetics, its basic procedures, the equipment required, and probe generation. The book then describes tips and tricks for making different tissues available for molecular cytogenetic studies. These are followed by chapters on various multicolor FISH probe sets, their availability, and their potential for use in combination with other approaches. The possible applications that are shown encompass the characterization of marker chromosomes, cryptic cytogenetic aberrations and epigenetic changes in humans by interphase and metaphase cytogenetics, studies of nuclear architecture, as well as the application of molecular cytogenetics to zoology, botany and microbiology.

Signal and Noise in Geosciences Martin H. Trauth, 2021-11-06 This textbook introduces methods of geoscientific data acquisition using MATLAB in combination with inexpensive data acquisition hardware such as sensors in smartphones, sensors that come with the LEGO MINDSTORMS set, webcams with stereo microphones, and affordable spectral and thermal cameras. The text includes 35 exercises in data acquisition, such as using a smartphone to acquire stereo images of rock specimens from which to calculate point clouds, using visible and near-infrared spectral cameras to classify the minerals in rocks, using thermal cameras to differentiate between different types of surface such as between soil and vegetation, localizing a sound source using travel time differences between pairs of microphones to localize a sound source, quantifying the total harmonic distortion and signal-to-noise ratio of acoustic and elastic signals, acquiring and streaming meteorological data using application programming interfaces, wireless networks, and internet of things platforms, determining the spatial resolution of ultrasonic and optical sensors, and detecting magnetic anomalies using a smartphone magnetometer mounted on a LEGO MINDSTORMS scanner. The

book's electronic supplementary material (available online through Springer Link) contains recipes that include all the MATLAB commands featured in the book, the example data, the LEGO construction plans, photos and videos of the measurement procedures.

Processing of Polymer-based Nanocomposites Suprakas Sinha Ray,2018-09-07 Processing of polymer nanocomposites usually requires special attention since the resultant structure—micro- and nano-level, is directly influenced by among other factors, polymer/nano-additive chemistry and the processing strategy. This book consolidates knowledge, from fundamental to product development, on polymer nanocomposites processing with special emphasis on the processing-structure-property-performance relationships in a wide range of polymer nanocomposites. Furthermore, this book focuses on emerging processing technologies such as electrospinning, which has very exciting applications ranging from medical to filtration. Additionally, the important role played by the nanoparticles in polymer blends structures has been illustrated in the current book, with special focus on fundamental aspects and properties of nanoparticles migration and interface crossing in immiscible polymer blend nanocomposites. This book introduces readers to nanomaterials and

polymer nanocomposites processing. After defining nanoparticles and polymer nanocomposites and discussing environmental aspects, the second chapter focuses on the synthesis and functionalization of nanomaterials with applications in polymers. A brief overview on nanoclay and nanoclay-containing polymer nanocomposites is provided in third chapter. The fourth chapter provides an overview of the polymer nanocomposites structural elucidation techniques, such as X-ray diffraction and scattering, microscopy and spectroscopy, rheology. The fifth chapter is dedicated to the polymer nanocomposites processing technologies, among which electrospinning, which has very exciting applications ranging from medical to filtration. The last chapter provides an overview on how melt-processing strategy impact structure and mechanical properties of polymer nanocomposites by taking polypropylene-clay nanocomposite as a model system. The book is useful to undergraduate and postgraduate students (polymer engineering, materials science & engineering, chemical & process engineering), as well as research & development personnel, engineers, and material scientists.

Inventing Marcel Duchamp Janine A. Mileaf, Francis M. Naumann, Michael R. Taylor, 2009-04-10 An old genre is given a new look, as portraits and self-portraits of Marcel Duchamp invent and cover up as much as they reveal and portray. One of the most influential artists of the twentieth century, Marcel Duchamp (1887-1968) was a master of self-invention who carefully regulated the image he projected through self-portraiture and through his collaboration with those who portrayed him.

During his long career, Duchamp recast accepted modes for assembling and describing identity, indelibly altering the terrain of portraiture. This groundbreaking book (which accompanies a major exhibition at the Smithsonian Institution's National Portrait Gallery) demonstrates the ways in which Duchamp willfully manipulated the techniques of portraiture both to secure his reputation as an iconoclast and to establish himself as a major figure in the art world. Although scholars have explored Duchamp's use of aliases, little attention has been paid to how this work played into, and against, existing portrait conventions. Nor has any study yet compared these explicitly self-constructed projects with the large body of portraits of Duchamp by others. *Inventing Marcel Duchamp* showcases approximately one hundred never-before-assembled portraits and self-portraits of Duchamp. The (broadly defined) self-portraits and self-representations include the famous autobiographical suitcase *Boîte-en-Valise* and *Self-Portrait in Profile*, a torn silhouette that became very influential for future generations of artists. The portraits by other artists include works by Duchamp's contemporaries Man Ray, Alfred Stieglitz, Francis Picabia, Beatrice Wood, and Florine Stettheimer as well as portraits by more recent generations of artists, including Andy Warhol, Jasper Johns, Sturtevant, Yasumasa Morimura, David Hammons, and Douglas Gordon. Since the mid-twentieth century, as abstraction assumed a position of dominance in fine art, portraiture has been often derided as an art form; the images and essays in *Inventing Marcel Duchamp* counter this, and invite us to rethink the role of portraiture in modern and contemporary art.

The Phonetics of Wa Justin Watkins,2002

Observation of the Earth and its Environment Herbert J. Kramer,2013-03-09 The following listing represents a survey and a short description of 'Earth Observing Missions' in alphabetical order. The listing in Part A considers completed-, operational-as well as planned missions on an international scale (Earth observations from space know no national boundaries). A look into past activities is important for reasons of heritage, context and of perspective. The document is intended for all who want to keep track of missions and sensors in the fast -growing field of Earth observations. There cannot be any claim to completeness, although a considerable effort was made to collect and integrate all known missions and sensors into this book. Earth observation by remote sensing changes our view and perception of the world. We begin to realize the global character of remote sensing, its multidimensional and complementary nature, its vast potential to many disciplines, its importance to mankind as a whole. Remote sensing permits for the first time in history a total system view of the Earth. The view from space toward Earth has brought about sweeping revisions in the Earth sciences, in particular in such fields as meteorology, oceanology, hydrology, geology, geography, forestry, agriculture, geodynamics, solar-terrestrial interactions, and many others.
