The Toy Robot , 2019

Robots 1:1 Rolf Fehlbaum, 2018-08-28 ROBOTS 1:1 explores the space-themed toys in the R. F. Robot Collection held by the Vitra Design Museum. Largely produced in Japan between 1937 and 1973, these figures of robots (and the occasional astronaut) have been carefully researched and compiled over the years by Rolf Fehlbaum, Chairman Emeritus of Vitra and founder of the Vitra Design Museum, who describes them as »small kinetic sculptures of great originality. Ever since the term's first appearance in Czech writer Karel

Čapek's science fiction play »R. U. R.« in 1921, robots have both served and taken over the work of humans, creating human dependency and at times a shift in the power dynamics of a society. ROBOTS 1:1 is unique in that it shows the toys and their original packaging (when available) in a scale of 1:1, with the largest robot determining the size of the book. In this way, it conveys something of the uncanny nature of the robots and their ambivalence, while the vivid illustrations on the boxes give an idea of the futuristic fantasies developed over the period. ROBOTS 1:1 is limited to an edition of 1,000 copies, numbered and signed by Rolf Fehlbaum. A USB stick with 34 short films demonstrating a selection of robots in action is integrated into the spine of the book, alongside a poster featuring 80 robots in chronological order of their release.

straws, string, tape, and glue can be used to construct a working model of the human hand. Every hands-on project contains a materials list and detailed step-by-step instructions with photos. Mercer also includes explanations of the science and technology behind each robot, including concepts such as friction, weight and mass, center of gravity, kinetic and potential energy, electric circuitry, DC vs. AC current, and more. Teachers will appreciate the opportunity to augment their STEM curricula while having fun at the same time. These projects are also perfect for science fairs or design competitions. Bobby Mercer has been a high school physics teacher for over two decades. Beautifully illustrated throughout, Boot is a special book you will want to treasure and share. Boot soon realises its emotions make it different to other robots, who just function and don't think. Boot is scared but tries to be brave, which is hard when its screen keeps showing a wobbly, worried face. Luckily Boot meets Noke and Red - other 'advanced' robots who have learned to survive in secret. With its new friends by its side, Boot is determined to find Beth and the gang set off on a dangerous adventure. Everything Boot thought it knew about the world is changing and things aren't as simple as it remembers . . . Space Fantasies 1:1 Fifo Stricker, 2020-10-06 This limited-edition collection of space exploration toys--from shuttles to space dogs--taps into the nostalgia and imagination of 20th-century science fiction Presented in this oversize publication are 146 aerospace-related toys from the collection of Rolf Fehlbaum, Vitra's chairman emeritus and the founder of Vitra Design Museum. Toys related to space exploration--rockets, robots and astronaut figurines--exploded in popularity in the 1930s with the success of space opera comic strips such as Buck Rogers and Flash Gordon, which portrayed

postwar fantasies of untold technological possibilities. From there, sci-fi only gained a wider audience as the Soviet/American space race began and people of all ages turned their gazes skywards to wonder about what marvels may exist beyond Earth's orbit. The toys in this volume are shown at their original size with the available packaging, organized into ten categories and arranged in chronological order by their manufacture dates. Some of the toys depict amusing conjectures for the future of aeronautical exploration such as space dogs, space elephants and even a space whale, while others are more realistic replicas of rockets in miniature. Infused with an undeniable nostalgia, this collection maintains the childlike wonder of the toys' initial audiences and invites present-day readers to both reflect on the era's technological advancements and look to the future for what discoveries may still be on the horizon.
