Cannibalizing Modernism Adriano Pedrosa, Fernando Oliva, 2019-10-22 The most comprehensive exhibition catalog dedicated to the work of Brazilian artist Tarsila do Amaral (1886-1973), a pioneering figure in Latin American modernism. The focus of the exhibition is the popular, or the vernacular, a notion as complex in Brazil as it is contested, and which Tarsila explored in different ways throughout her career. The popular is associated with debates on national art or identity and the invention or construction of *brasileidade*, Brazilianness. In Tarsila, the popular is manifested in landscapes of the countryside or the suburbs, the farm or the favela, populated by people of indigenous or African descent, characters from Brazilian folklore, full of animals and plants, both real and fantastic. But Tarsila's palette (which served as inspiration for the colors of the exhibition design) is also popular: pure blue, violaceous rose, bright yellow, singing green. Much of the art criticism on Tarsila to this day in Brazil has emphasized her French affiliations and genealogies, possibly in search of the artist's international legitimization, but thus marginalizing the themes, characters, and popular narratives that she constructed. Today, after successful shows in the United States and Europe, we can look at Tarsila in other ways. In this sense, the essays and commentaries on her works included in the exhibition and in the catalog are central elements of this project. It is not by chance that the controversial painting *A Negra* [The Negress] has received special attention from the authors and is a central work in the exhibition. *Tarsila do Amaral: Cannibalizing Modernism* does not seek to exhaust all these discussions, which take into account questions of race, class and colonialism. But the project does point to the need to study this artist, so fundamental in our art history, from new perspectives and approaches. This exhibition is part of a series that MASP has organized reassessing the notion of the popular in Brazil: from *A mão do povo brasileiro*, 1969/2016 [The Hand of the Brazilian People, 1969/2016] and *Portinari popular* [Popular Portinari] in 2016 to Agostinho Batista de Freitas in 2017 and Maria Auxiliadora in 2018. *Tarsila do Amaral: Cannibalizing Modernism* is contextualized in a full year dedicated to women artists at the museum in 2019 under the heading *Women's Histories*, *Feminist Histories*. The exhibition dialogues with two others dedicated to artists who explored the notion of the popular through different approaches: *Djanira: Picturing Brazil*, on view through May 19th, and *Lina Bo Bardi: Habitat*, on view through July 28th.

Medical Toxicology Pinar Erkekoglu, Tomohisa Ogawa, 2021-02-03 Medical toxicology is a sub-branch of toxicology concerned with the diagnosis, management, and prevention of poisoning and other adverse effects of drugs, cosmetics, personal care products, occupational and environmental toxicants, and biological agents. Poisoning with drugs, herbs, venoms, and toxins is a significant global public health problem. Medical toxicologists are involved in the assessment and treatment of acute or chronic poisoning, substance abuse, adverse drug reactions, drug overdoses, envenomation, industrial accidents, and other chemical exposures. As such, there is a

pressing need for safe and specific antidotes, as many antidotes currently in use have a relatively low margin of safety or therapeutic index. This book focuses on poisonings with drugs, venoms, toxins, interaction in clinics, antidotes, and forensics. It provides qualified scientific knowledge on different aspects of medical toxicology, drug and substance abuse, clinical interactions between drugs and herbs, antidotes, antidote networks, and forensic toxicology.

Tarsila Do Amaral Stephanie D'Alessandro,Luis Pérez Oramas,2017-01-01 An exploration of the innovative, quintessentially Brazilian painter who merged modernism with the brilliant energy and culture of her homeland Tarsila do Amaral (1886-1973) was a central figure at the genesis of modern art in her native Brazil, and her influence reverberates throughout 20th- and 21st-century art. Although relatively little-known outside Latin America, her work deserves to be understood and admired by a wide contemporary audience. This publication establishes her rich background in European modernism, which included associations in Paris with artists Fernand Léger and Constantin Brancusi, dealer Ambroise Vollard, and poet Blaise Cendrars. Tarsila (as she is known affectionately in Brazil) synthesized avant-garde aesthetics with Brazilian subjects, creating stylized, exaggerated figures and landscapes inspired by her native country that were powerful emblems of the Brazilian modernist project known as Antropofagia. Featuring a selection of Tarsila's major paintings, this important volume conveys her vital role in the emerging modern-art scene of Brazil, the community of artists and writers (including poets Oswald de Andrade and Mário de Andrade) with whom she explored and developed a Brazilian modernism, and how she was subsequently embraced as a national cultural icon. At the same time, an analysis of Tarsila's legacy questions traditional perceptions of the 20th-century art world and asserts the significant role that Tarsila and others in Latin America had in shaping the global trajectory of modernism.

Biological and Biomedical Infrared Spectroscopy Andreas Barth,Parvez I. Haris,2009 Although infrared spectroscopy has been applied with success to the study of important biological and biomedical processes for many years, key advances in this vibrant technique have led to its increasing use, ranging from characterization of individual macromolecules (DNA, RNA, lipids, proteins) to human tissues, cells and their components. Infrared spectroscopy thus has a significant role to play in the analysis of the vast number of genes and proteins being identified by the various genomic sequencing projects. Whilst this book gives an overview of the field, it highlights more recent developments, such as the use of bright synchrotron radiation for recording infrared spectra, the development of two-dimensional infrared spectroscopy and the ability to record infrared spectra at ultra fast speeds.

Dialogue with Europe, Dialogue with the Past Justyna Olko,John Sullivan,Jan Szeminski,2018-11-30 Dialogue with Europe, Dialogue with the Past is a critical, annotated anthology of indigenous-authored texts, including the Nahua, Quechua, and Spanish originals, through which native peoples and Spaniards were able to convey their own perspectives on Spanish colonial order. It is the first volume to bring together native testimonies from two different areas of Spanish expansion in the Americas to examine comparatively these geographically and culturally distant realities of indigenous elites in the colonial period. In each chapter a particular document is transcribed exactly as it appears in the original manuscript or colonial printed document, with the editor placing it in historical context and considering the degree of European influence. These texts show the nobility through documents they themselves produced or caused to be produced—such as wills, land deeds, and petitions—and prioritize indigenous ways of expression,

perspectives, and concepts. Together, the chapters demonstrate that native elites were independent actors as well as agents of social change and indigenous sustainability in colonial society. Additionally, the volume diversifies the commonly homogenous term “cacique” and recognizes the differences in elites throughout Mesoamerica and the Andes. Showcasing important and varied colonial genres of indigenous writing, Dialogue with Europe, Dialogue with the Past reveals some of the realities, needs, strategies, behaviors, and attitudes associated with the lives of the elites. Each document and its accompanying commentary provide additional insight into how the nobility negotiated everyday life. The book will be of great interest to students and researchers of Mesoamerican and Andean history, as well as those interested in indigenous colonial societies in the Spanish Empire. Neotropical Owls Paula L. Enriquez, 2017-07-24 This book presents a comprehensive biological and ecological information about owls in the neotropic area. In addition the book covers topics such as threats and conservation strategies for these nocturnal birds of prey from 18 Neotropical countries. Owls are a good example of diversification processes and have developed evolutionary characteristics themselves. These species are found almost everywhere in the world but most of them are distributed in tropical areas and about a third of them live in the Neotropics. This biogeographic region has a high biodiversity and even share lineages of species from other continents because at some point all were part of Pangea. Although we still have much to know and understand about this diverse, scarcely studied and threatened group this work aims to be a precedent for future and further research on the subject.

Toxins and Hemostasis R. Manjunatha Kini, Kenneth J Clemetson, Francis S. Markland, Mary Ann McLane, Takashi Morita, 2010-10-19 Circulation of blood is vital for the survival of vertebrates, including man. Mainly, it plays an important role in carrying food nutrients and oxygen to every tissue and organ and in removing all waste products and carbon dioxide. Any imbalance in the hemostatic and cardiovascular systems can lead to death and severe debility. A number of animals have developed mechanisms to target these systems and exploit the vulnerability. In some species (for example, snakes), such mechanisms are used to immobilize and kill the victim/prey, whereas in others (for example, insects, such as leaches, mosquitoes and ticks), they are used to provide a continuous supply of blood. These mechanisms include, but are not limited to, procoagulant and anticoagulant actions that affect the coagulation cascade and platelet aggregation, as well as altering vasodilatory responses. In all these various animals, these mechanisms have evolved to perfection over millions of years to support their survival. In last 3-4 decades, due to the efforts of scientists from various backgrounds including biology, protein chemistry, molecular biology, pharmacology, hematology, and structural biology, significant progress in understanding the structure-function relationships, as well as the mechanism of action have been made in a number of exogenous factors that affect blood coagulation, platelet aggregation and vasodilation from various animals. These exogenous factors have contributed significantly to the development of research tools as well as providing new therapeutic agents. With the increase average age of the population coupled with changes in life style in recent years, there has been a significant increase in cardiovascular

and hematological disorders. Thus scientists in both academic institutions as well as the pharmaceutical industry are developing better therapeutic agents to improve the quality of life. This impetus has led to the search for novel agents from various sources that interfere with cardiovascular and hematological processes. Although at first glance exogenous factors appear to function as 'villains', several life-saving drugs have been developed based upon these factors. Such drugs or drug leads include those that inhibit the angiotensin converting enzymes (Captopril and Enalapril), that block platelet receptors (Eptifibatide and Tirofiban), or that digest thrombotic plugs (Alfimeprase and bat plasminogen activator) to name a few. Several new and exciting success stories are currently unfolding. In this book, recent studies on some of the exogenous factors that play crucial roles in cardiovascular and hematological disorders are reviewed in order to consolidate the efforts in this area of research and to recruit new, talented researchers. The 25-30 review chapters, each written by experts in their field, compiled herein are devoted to exogenous factors affecting platelet aggregation, anticoagulant and procoagulant proteins, fibrinolytic proteins and hypotensive agents (For details see, Contents of the Book). This book is intended to help to create elevated awareness and enthusiasm in the field of exogenous factors. I believe that this book will provide greater impetus to the search for novel proteins based on naturally occurring exogenous factors. This will be the first book dealing extensively with exogenous factors in the last 25 years. The book will provide a ready reference to the different approaches used to solve complex problems in protein chemistry and pharmacology of exogenous factors. The book will update our understanding of the structure-function relationships and mechanisms of action of exogenous factors and provide great insights into future directions for solving the remaining challenges.

Anaconda Horacio Quiroga, 2017-10-28 Horacio Quiroga alcanzó gran repercusión entre la crítica y el público continental. Los cuentos aquí reunidos -aparecidos originalmente en publicaciones porteñas en los años anteriores- dan cuenta de un amplio periodo de su experiencia narrativa y vital: los primeros años en Buenos Aires, el deslumbramiento por la cinematografía, sus proyectos agrícolas en el Chaco, la profunda incursión en Misiones, el regreso a la capital. El relato epónimo es, quizás, uno de los más conocidos de la literatura latinoamericana. A través de sus páginas, quedan patente la admiración y la maravilla que sentía Quiroga por la selva y sus criaturas, al narrar magistralmente el encuentro de Anaconda con la bestia más temible de todas: el hombre
