Building a Viking Ship in Maine Paul T. Cunningham, 2012 In 1996, professional photographer Paul Cunningham made the long drive down a narrow peninsula and onto Hermit Island in Phippsburg, Maine, to the boatshop of Rob Stevens to record the building of a Viking knarr later christened Snorri. Throughout the seven-month process, Cunningham revisited the site many times, curiosity having gotten the better of him. Many people were bitten by the same bug. So many, in fact, that Stevens had to post a sorry, but we do not have time to talk sign so that Snorri would be finished on schedule. But a picture says a thousand words, and Cunningham's photos, taken with decades of journalism experience, say volumes about the ingenuity, skill and patience of a small band of boat builders who, out of wood and iron, created a sea-worthy vessel, the likes of which had not been seen in the light of day for a thousand years. About the author: Paul T. Cunningham grew up in Freeport, Maine. He earned a degree in Secondary Science Education at University of Southern Maine (Gorham State College). Subsequently, for nearly a decade, he taught elementary science in Gardiner, Maine. Paul's love of photography led him away from the classroom. His first photographic job was with The Shopping Notes during the late 1980s. In 1990 Cunningham began his career as photojournalist at The Times Record and retired from there in 2008. Now Paul freelances, and volunteers with Freeport Fire and Rescue and the Freeport Historical Society. The balance of his time is spent organizing the fruits of two decades of photography.

Galileo Unbound David D. Nolte, 2018-07-12 *Galileo Unbound* traces the journey that brought us from Galileo's law of free fall to today's geneticists measuring evolutionary drift, entangled quantum particles moving among many worlds, and our lives as trajectories traversing a health space with thousands of dimensions. Remarkably, common themes persist that predict the evolution of species as readily as the orbits of planets or the

collapse of stars into black holes. This book tells the history of spaces of expanding dimension and increasing abstraction and how they continue today to give new insight into the physics of complex systems. Galileo published the first modern law of motion, the Law of Fall, that was ideal and simple, laying the foundation upon which Newton built the first theory of dynamics. Early in the twentieth century, geometry became the cause of motion rather than the result when Einstein envisioned the fabric of space-time warped by mass and energy, forcing light rays to bend past the Sun. Possibly more radical was Feynman's dilemma of quantum particles taking all paths at once — setting the stage for the modern fields of quantum field theory and quantum computing. Yet as concepts of motion have evolved, one thing has remained constant, the need to track ever more complex changes and to capture their essence, to find patterns in the chaos as we try to predict and control our world.

Ship Modeling Simplified: Tips and Techniques for Model Construction from Kits Frank Mastini, 1990-03-22 In *Ship Modeling Simplified*, master model builder Frank Mastini puts to paper the methods he's developed over 30 years at the workbench to help novices take their first steps in an exciting pastime. You don't need the deftness of a surgeon or the vocabulary of an old salt to build a model. What you need is an understanding coach. Mastini leads readers from the mysteries of choosing a kit and setting up a workshop through deciphering complicated instructions and on to painting, decorating, and displaying finished models--with patience and clarity, not condescension. He reveals dozens of shortcuts: How to plank a hull egg-shell tight; how to build and rig complicated mast assemblies without profanity; how to create sails that look like sails. . . . And along the way he points out things that beginners usually do wrong--beforehand, not after they've taken hammers to their projects. *Ship Modeling Simplified* even includes an Italian-English dictionary of nautical terms, the key to assembling the

many high-quality Italian kits on the American market. Model building is fun, and not nearly as difficult as some experts would have you believe. Here is everything you'll ever need to get started in a hobby that will last a lifetime.

Bad Medicine David Wootton, 2007-11-22 In this controversial new account of the history of medicine, David Wootton argues that, from the fifth century BC until the 1930s, doctors actually did more harm than good, and asks just how much harm they still do today.

Strathclyde and the Anglo-Saxons in the Viking Age Tim Clarkson, 2014-12-21 This book traces the history of relations between the kingdom of Strathclyde and Anglo-Saxon England in the Viking period of the ninth to eleventh centuries AD. It puts the spotlight on the North Britons or 'Cumbrians', an ancient people whose kings ruled from a power-base at Govan on the western side of present-day Glasgow. In the tenth century, these kings extended their rule southward from Clydesdale to the southern shore of the Solway Firth, bringing their language and culture to a region that had been in English hands for more than two hundred years. They played a key role in many of the great political events of the time, whether leading their armies in battle or forging treaties to preserve a fragile peace. Their extensive realm, which was also known as 'Cumbria', was eventually conquered by the Scots, but is still remembered today in the name of an English county. How this county acquired the name of a long-vanished kingdom centred on the River Clyde is one of the topics covered in this book. It is part of a wider history that forms an important chapter in the story of how England and Scotland emerged from the early medieval period or 'Dark Ages' as the countries we know today.

In 1976, Tim Severin and a crew of four men, set out to recreate the Brendan legend. Using the exact same methods in constructing their sailing vessel, they set out on their hazardous voyage, making it one of the most inspiring expeditions in the history of exploration.

A Man and His Ship Steven Ujifusa, 2013-06-04 “A fascinating historical account...A snapshot of the American Dream culminating with this country’s mid-century greatness” (The Wall Street Journal) as a man endeavors to build the finest, fastest, most beautiful ocean liner in history. The story of a great American Builder at the peak of his power, in the 1940s and 1950s, William Francis Gibbs was considered America’s best naval architect. His quest to build the finest, fastest, most beautiful ocean liner of his time, the SS United States, was a topic of national fascination. When completed in 1952, the ship was hailed as a technological masterpiece at a time when “made in America” meant the best. Gibbs was an American original, on par with John Roebling of the Brooklyn Bridge and Frank Lloyd Wright of Fallingwater. Forced to drop out of Harvard following his family’s sudden financial ruin, he overcame debilitating shyness and lack of formal training to become the visionary creator of some of the finest ships in history. He spent forty years dreaming of the ship that became the SS United States. William Francis Gibbs was driven, relentless, and committed to excellence. He loved his ship, the idea of it, and the realization of it, and he devoted himself to making it the epitome of luxury travel during the triumphant post-World War II era. Biographer Steven Ujifusa brilliantly describes the way Gibbs worked and how his vision transformed an industry. *A Man and His Ship* is a tale of ingenuity and enterprise, a truly remarkable journey on land and sea.

Whaleback Ships and the American Steel Barge Company C. Roger Pellett, 2018-05-14 The whaleback ship reflected the experiences of its inventor, Captain Alexander McDougall, who decided in the 1880s that he could build an improved and easily towed barge cheaply by using the relatively unskilled labor force available in his adopted hometown of Duluth, Minnesota. Captain McDougall's dream resulted in the creation of the American Steel Barge Company. From 1888 to 1898, the American Steel Barge Company built and operated a fleet of forty-four barges and steamships on the Great Lakes and in international trade. These new ships were considered revolutionary by some and nautical curiosities by others. Built from what was then a high tech material (steel) and powered by state-of-the-art steam machinery, their creation in the remote north was a sign of industrial accomplishment. In *Whaleback Ships and the American Steel Barge Company*, Roger C. Pellett explains that the construction of these ships and the industrial infrastructure required to build them was financed by a syndicate that included some of the major players active in the Golden Age of American capitalism. The

American Steel Barge Company operated profitably from 1889 through 1892, each year adding new vessels to its growing fleet. By 1893, it had run out of cash. The cash crisis worsened with the onset of the Panic of 1893, which plunged the country into a depression that mostly halted the ship-building industry. Only one shareholder, John D. Rockefeller, was willing and able to invest in the company to keep it afloat, and by doing so he gained control. When prosperity returned in 1896, the interest in huge iron ore deposits on the Mesabe Range required larger, more efficient vessels. In an attempt to meet this need, the company built another vessel that incorporated many whaleback features but included a conventional Great Lakes steamship bow. Although this new steamship compared favorably with vessels of conventional design, it was the last vessel of whaleback design to be built. *Whaleback Ships and the American Steel Barge Company* objectively examines the design of these ships using the original design drawings, notes the successes and failures of the company's business strategy, and highlights the men at the operating level that attempted to make this strategy work. Readers interested in the maritime history of the Great Lakes and the industries that developed around them will find this book fascinating.

McDougall's Great Lakes Whalebacks Neel R. Zoss, 2007
During the last years of the 19th century, the Duluth Harbor, situated between the sister cities of Duluth, Minnesota, and Superior, was the birthplace of a bold and innovative and decidedly odd-looking class of Great Lakes barges and steamships known as whalebacks. Capt. Alexander McDougall and his American Steel Barge Company built the curved-decked, snout-nosed whalebacks on the shores of the harbor, first at Duluth's Rice's Point and later in Howard's Pocket at Superior. The vessels were a radical departure, in design, form, and construction, from the standard shipbuilding concepts of the era but proved themselves more than capable as a number of the boats sailed the

Great Lakes and the seaboards of America until the 1960s. All the whalebacks are gone now--either scrapped or sunk--with one exception. After sailing the lakes for more than 70 years, the last whaleback, the SS Meteor, returned home to Superior in 1972 and is now continuing its service as a magnificent maritime museum on Barker's Island.

American Battleships, 1886-1923 John C. Reilly, Robert L. Scheina, 1980

Salvage Man John Doughty Alden, 1998 Few American naval officers have been as unconventional as Edward Ellsberg and still managed to rise to the rank of rear admiral. This probing biography shows Ellsberg time and again confronting the Navy's conservatism, service politics, and professional jealousies to literally salvage the unsalvageable. Taking full advantage of Ellsberg's extensive collection of papers and archives on both sides of the Atlantic, this insightful study is the first to focus on the determined admiral.

The U.S. Army in the Iraq War Joel Rayburn, Frank K. Sobchak, 2019 The Iraq War has been the costliest U.S. conflict since the Vietnam War. To date, few official studies have been conducted to review what happened, why it happened, and what lessons should be drawn. The U.S. Army in the Iraq War is the Army's initial operational level analysis of this conflict, written in narrative format, with assessments and lessons embedded throughout the work. This study reviews the conflict from a Landpower perspective and includes the contributions of coalition allies, the U.S. Marine Corps, and special operations forces. Presented principally from the point of view of the commanders in Baghdad, the narrative examines the interaction of the operational and strategic levels, as well as the creation of theater level strategy and its implementation at the tactical level. Volume 1 begins in the truce tent at Safwan Airfield in southern Iraq at

the end of Operation DESERT STORM and briefly examines actions by U.S. and Iraqi forces during the interwar years. The narrative continues by examining the road to war, the initially successful invasion, and the rise of Iraqi insurgent groups before exploring the country's slide toward civil war. This volume concludes with a review of the decision by the George W. Bush administration to surge additional forces to Iraq, placing the conduct of the surge and its aftermath in the second volume.
