God's Amazing Grace: Reconciling Four Centuries of African American Marriages and Families Terry M. Turner,2017-12-18 "God's Amazing Grace: Reconciling Four Centuries of African American Marriages and Families is an insightful study that will be welcomed by thoughtful practitioners and all who ponder the African American family's complexity. Readers familiar with the deep, rich reservoir of African American family literature will recognize many of the black scholars referenced in this work. Readers unfamiliar with these sources will be grateful to discover them and the effective use of disparate literature. "This work will become a different kind of guide for studying American history through the lens of the African American family. Underneath all the research is the

search for answers to the compelling questions: Is there a correlation between slave owners' denial to slaves, God's design for the family, and the familial chaos that has plagued African American families for more than a hundred fifty years? And if there is connection, what is it? "The author has brought something new to a familiar topic of discussion—the Bible. The unique moral compass that steered this study is solidly anchored in the bedrock of holy scripture. In this work, the history and sociology of African American marriages are examined in light of the questions asked by Holy Scripture. In so doing, Dr. Turner skillfully attempts to help readers make sense of the story of black families in America. May this book mark the beginning to a new reality for African American families" (Dr. Willie Peterson, senior executive advisor, adjunct professor of Pastoral Ministries, Dallas Theological Seminary).

Flying Blind Peter Robison, 2022-10-11 NEW YORK TIMES BUSINESS BEST SELLER • A suspenseful behind-the-scenes look at the dysfunction that contributed to one of the worst tragedies in modern aviation: the 2018 and 2019 crashes of the Boeing 737 MAX. An authoritative, gripping and finely detailed narrative that charts the decline of one of the great American companies (New York Times Book Review), from the award-winning reporter for Bloomberg. Boeing is a century-old titan of industry. It played a major role in the early days of commercial flight, World War II bombing missions, and moon landings. The planemaker remains a cornerstone of the U.S. economy, as well as a linchpin in the awesome routine of modern air travel. But in 2018 and 2019, two crashes of the Boeing 737 MAX 8 killed 346 people. The crashes exposed a shocking pattern of malfeasance, leading to the biggest crisis in the company's history—and one of the costliest corporate scandals ever. How did things go so horribly wrong at Boeing? *Flying Blind* is the definitive exposé of the disasters that transfixed the world. Drawing from exclusive interviews with current and former employees of Boeing and the FAA; industry executives and analysts; and family members of the victims, it reveals how a broken corporate culture paved the way for catastrophe. It shows how in the race to beat the competition and reward top executives, Boeing skimped on testing, pressured employees to meet unrealistic deadlines, and convinced regulators to put planes into service without

properly equipping them or their pilots for flight. It examines how the company, once a treasured American innovator, became obsessed with the bottom line, putting shareholders over customers, employees, and communities. By Bloomberg investigative journalist Peter Robison, who covered Boeing as a beat reporter during the company's fateful merger with McDonnell Douglas in the late '90s, this is the story of a business gone wildly off course. At once riveting and disturbing, it shows how an iconic company fell prey to a win-at-all-costs mentality, threatening an industry and endangering countless lives.

Structural Health Monitoring of Aerospace Composites Victor Giurgiutiu, 2015-09-08 Structural Health Monitoring of Aerospace Composite Structures offers a comprehensive review of established and promising technologies under development in the emerging area of structural health monitoring (SHM) of aerospace composite structures. Beginning with a description of the different types of composite damage, which differ fundamentally from the damage states encountered in metallic airframes, the book moves on to describe the SHM methods and sensors currently under consideration before considering application examples related to specific composites, SHM sensors, and detection methods. Expert author Victor Giurgiutiu closes with a valuable discussion of the advantages and limitations of various sensors and methods, helping you to make informed choices in your structure research and development. The first comprehensive review of one of the most ardent research areas in aerospace structures, providing breadth and detail to bring engineers and researchers up to speed on this rapidly developing field Covers the main classes of SHM sensors, including fiber optic sensors, piezoelectric wafer active sensors, electrical properties sensors and conventional resistance strain gauges, and considers their applications and limitation Includes details of active approaches, including acousto-ultrasonics, vibration, frequency transfer function,

guided-wave tomography, phased arrays, and electrochemical impedance spectroscopy (ECIS), among other emerging methods

Case Study: Boeing Supply Chain Challenges during the Manufacture of Boeing 787 Aircraft Carol Mueni, 2013-12-03 Seminar paper from the year 2010 in the subject Business economics - Supply, Production, Logistics, grade: A, The University of Liverpool, language: English, abstract: Founded in 1916, at the Puget Sound location in Washington State USA, Boeing is the largest aircraft company in the world, manufacturing commercial aircrafts, military aircrafts, satellites, weapons and electronic defence systems. It has a history of being the best aircraft company in leadership and innovation to design leading aircraft designs. The company uses advanced technology, engineering skills and innovative leadership to design and develop its products. As a result, it is the best in the USA and worldwide, serving many other nations with commercial and military aircraft. To remain innovative and competitive, in 1990s Boeing started considering a replacement of the Boeing 767, due to slow rate of sales. By 16th December 2003, Boeing announce that it was going to assemble the 787 jet in its factory located at Everett Washington . In building this plane, the company focused on reducing the time line from 6 years to 4 years. Instead of contracting the plane from scratch, it was going to outsource parts and issue sub-contracts to other companies in other nations. The process of production requires raw materials and

labor, which take time to procure and manage for the companies to come up with the right products. For the Boeing company to produce the 787 parts in the USA, it would have incurred high costs in procurements and a lot of management logistics. To cut down these costs, outsourcing was a nice way out that provided the company with the ability to enjoy the availability of skilled labor and raw materials in the outsourcing companies.
