The Art of Manipulating Fabric Colette Wolff, 1996-10-01 The possibilities for three-dimensional manipulation of fabric - gathering, pleating, tucking, shirring, and quilting woven materials - are seemingly endless. To describe them all would be to describe the entire history of sewing. In *The Art of Manipulating Fabric*, Colette Wolff has set herself just this task, and she succeeds brilliantly. Working from the simplest possible form - a flat piece of cloth and a threaded needle - she categorizes all major dimensional techniques, show how they are related, and give examples of variations both traditional and modern. The result is an encyclopedia of techniques that resurface, reshape, restructure and reconstruct fabric. • More than 350 diagrams support the extensive how-tos, organized into broad general categories, then specific sub-techniques • Handsome photos galleries showcase the breathtaking possibilities in each technique and aid visual understanding by emphasizing the sculptured fabric surface with light and shadow • Textile artists and quilters, as well as garment and home decor sewers, will expand their design horizons with the almost limitless effects that can be achieved.

Milestones in Analog and Digital Computing Herbert Bruderer, 2021-01-04 This Third Edition is the first English-language edition of the award-winning *Meilensteine der Rechentchnik*; illustrated in full color throughout in two volumes. The Third Edition is devoted to both analog and digital computing devices, as well as the world's most magnificent historical automata and select scientific instruments (employed in astronomy, surveying, time measurement, etc.). It also features detailed instructions for analog and digital mechanical calculating machines and instruments, and is the only such historical book with comprehensive technical glossaries of terms not found in print or in online dictionaries. The book also includes a very extensive bibliography based on the literature of numerous countries around the world. Meticulously researched, the author conducted a worldwide survey of science, technology and art museums with their main holdings of analog and digital calculating and computing machines and devices, historical automata and selected scientific instruments in order to describe a broad range of masterful technical achievements. Also covering the history of mathematics and computer science, this work documents the cultural heritage of technology as well.

Nidrstigningar Saga Dario Bullitta, 2018-01-18 The *Evangelium Nicodemi*, or Gospel of Nicodemus, was the most widely circulated apocryphal writing in medieval Europe. It depicted the trial, Passion, and crucifixion of Christ as well as his Harrowing of Hell. During the twelfth-century renaissance, some exemplars of the *Evangelium Nicodemi* found their way to Iceland where its text was later translated into the vernacular and known as *Niðrstigningar saga*. Dario Bullitta has embarked on a highly fascinating voyage that traces the routes of transmission of the Latin text to Iceland and continental Scandinavia. He argues that the saga is derived from a less popular twelfth-century French redaction of the *Evangelium Nicodemi*, and that it bears the exegetical and scriptural influences of twelfth-century Parisian scholars active at Saint Victor, Peter Comestor and Peter Lombard in particular. By placing *Niðrstigningar saga* within the greater theological and homiletical context of early thirteenth-century Iceland, Bullitta successfully adds to our knowledge of the early reception of Latin biblical and apocryphal literature in medieval Iceland and provides a new critical edition and translation of the vernacular text.

Principles of Electrical Machines VK Mehta | Rohit Mehta, 2008 For over 15 years *Principles of Electrical Machines* is an ideal text for students who look to gain a current and clear understanding of the subject as all theories and concepts are explained with lucidity and clarity. The Epochs of Nature Georges-Louis Leclerc, 2018-04-05 Georges-Louis Leclerc, le comte de Buffon's *The Epochs of Nature*, originally published as *Les Époques de la Nature* in 1778, is one of the first great popular science books, a work of style and insight that was devoured by Catherine the Great of Russia and influenced Humboldt, Darwin, Lyell, Vernadsky, and many other renowned scientists. It is the first geological history of the world, stretching from the Earth's origins to its foreseen end, and though Buffon was limited by the scientific knowledge of his era—the substance of the Earth was not, as he asserts, dragged out of the sun by a giant comet, nor is the sun's heat generated by tidal forces—many of his deductions appear today as startling insights. And yet, *The Epochs of Nature* has never before been available in its entirety in English—until now. In seven epochs, Buffon reveals the main features of an evolving Earth, from its hard rock substrate to the sedimentary layers on top, from the minerals and fossils found within these layers to volcanoes, earthquakes, and rises and falls in sea level—and he even touches on age-old mysteries like why the sun shines. In one of many moments of striking scientific prescience, Buffon details evidence for species extinction a generation before Cuvier's more famous assertion of the phenomenon. His seventh and final epoch does nothing less than offer the first geological glimpse of the idea that humans are altering the very foundations of the Earth—an idea of remarkable resonance as we debate the designation of another epoch: the Anthropocene. Also featuring Buffon's extensive "Notes Justificatives," in which he offers further evidence to support his assertions (and discusses vanished monstrous North American beasts—what we know as mastodons—as well as the potential existence of human giants), plus an enlightening introduction by editor and translator Jan Zalasiewicz and historians of science Sverker Sörlin, Libby Robin, and Jacques Grinevald, this extraordinary new translation revives Buffon's quite literally groundbreaking work for a new age.

Terrestrial Magnetism G. Hulot, Andre Balogh, U.R. Christensen, C. Constable, M. Manda, N. Olsen, 2014-11-22 The articles in this volume provide a detailed review of all aspects of the main magnetic field of the Earth produced within the Earth's core: its past history, its long and short term changes, the way it is generated. The book contains the combined knowledge of geomagnetism coming from paleomagnetic and archeomagnetic data, centuries of terrestrial observations and from the past few decades of intensive space observations. There is considerable emphasis on the phenomenology and the physical processes of the evolution of the geomagnetic field on different timescales. The book reports fully on our understanding of the present state of the magnetic field and its expected evolution in the future.

The Computer from Pascal to von Neumann Herman H. Goldstine,2008-09-02 In 1942, Lt. Herman H. Goldstine, a former mathematics professor, was stationed at the Moore School of Electrical Engineering at the University of Pennsylvania. It was there that he assisted in the creation of the ENIAC, the first electronic digital computer. The ENIAC was operational in 1945, but plans for a new computer were already underway. The principal source of ideas for the new computer was John von Neumann, who became Goldstine's chief collaborator. Together they developed EDVAC, successor to ENIAC. After World War II, at the Institute for Advanced Study, they built what was to become the prototype of the present-day computer. Herman Goldstine writes as both historian and scientist in this first examination of the development of computing machinery, from the seventeenth century through the early 1950s. His personal involvement lends a special authenticity to his narrative, as he sprinkles anecdotes and stories liberally through his text.
