4th International Conference on Internet of Things and Connected Technologies (ICIoTCT), 2019 Neeta Nain,Santosh Kumar Vipparthi,2020-02-14 This book presents the proceedings of the 4th International Conference on Internet of Things and Connected Technologies (ICIoTCT), held on May 9–10, 2019, at Malaviya National Institute of Technology (MNIT), Jaipur, India. The Internet of Things (IoT) promises to usher in a revolutionary, fully interconnected "smart" world, with relationships between objects and their environment and objects and people becoming more tightly intertwined. The prospect of the Internet of Things as a ubiquitous array of devices bound to the Internet could fundamentally change how people think about what it means to be "online". The ICIotCT 2019 conference provided a platform to discuss advances in Internet of Things (IoT) and connected technologies, such as various protocols and standards. It also offered participants the opportunity to interact with experts through keynote talks, paper presentations and discussions, and as such stimulated research. With the recent adoption of a variety of enabling wireless communication technologies, like RFID tags, BLE, ZigBee, embedded sensor and actuator nodes, and various protocols such as CoAP, MQTT and DNS, IoT has moved on from its infancy. Today smart sensors can collaborate directly with machines to automate decision-making or to control a task without human involvement. Further, smart technologies, including green electronics, green radios, fuzzy neural approaches, and intelligent signal processing techniques play an important role in the development of the wearable healthcare devices.

Health Informatics on FHIR: How HL7's New API is Transforming Healthcare Mark L. Braunstein,2018-07-26 This textbook begins with an introduction to the US healthcare delivery system, its many systemic challenges and the prior efforts to develop and deploy informatics tools to help overcome those problems. It goes on to discuss health informatics from an historical perspective, its current state and its likely future state now that electronic health record systems are widely deployed, the HL7 Fast Healthcare Interoperability standard is being rapidly accepted as the means to access the data stored in those systems and analytics is increasing being used to gain new knowledge from that aggregated clinical data. It then turns to some of the important and evolving areas of informatics including population and public health, mHealth and big data and analytics. Use cases and case studies are used in all of these discussions to help readers connect the technologies to real world challenges. Effective use of informatics systems and tools by providers and their patients is key to improving the quality, safety and cost of healthcare. With health records now digital, no effective means has existed for sharing them with patients, among the multiple providers who may care for them and for important secondary uses such as public/population health and research. This problem is a topic of congressional discussion and is addressed by the 21st Century Cures Act of 2016 that mandates that electronic health record (EHR) systems offer a patient-facing API. HL7's Fast Healthcare Interoperability Resources (FHIR) is that API and this is the first comprehensive treatment of the technology and the many ways it is already being used. FHIR is based on web technologies and is thus a far more facile, easy to implement approach that is rapidly gaining acceptance. It is also the basis for a 'universal health app platform' that literally has the potential to foster innovation around the data in patient records similar to the app ecosystems smartphones created around the data they store. FHIR app stores have already been opened by Epic and Cerner, the two largest enterprise EHR vendors. Provider facing apps are already being explored to improve EHR usability and support personalized medicine. Medicare and the Veteran's Administration have announced FHIR app platforms for their patients. Apple's new IOS 11.3 features the ability for consumers to aggregate their health records on their iPhone using FHIR. Health insurance companies are exploring applications of FHIR to improve service and communication with their providers and patients. SureScripts, the national e-Prescribing network, is using FHIR to help doctors know if their patients are complying with prescriptions. This textbook is for introductory health informatics courses for computer science and health sciences students (e.g. doctors, nurses, PhDs), the current health informatics community, IT professionals interested in learning about the field and practicing healthcare providers. Though this textbook covers an important new technology, it is accessible to non-technical readers including healthcare providers, their patients or anyone interested in the use of healthcare data for improved care, public/population health or research.

Radiology in Global Health Daniel J. Mollura,Matthew P. Lungren,2014-07-02 The World Health Organization stated that approximately two-thirds of the world's population lacks adequate access to medical imaging. The scarcity of imaging services in developing regions contributes to a widening disparity of health care and limits global public health programs that require imaging. Radiology is an important component of many global health programs, including those that address tuberculosis, AIDS-related disease, trauma, occupational and environmental exposures, breast cancer screening, and maternal-infant health care. There is a growing need for medical imaging in global health efforts and humanitarian outreach, particularly as an increasing number of academic, government, and non-governmental organizations expand delivery of health care to disadvantaged people worldwide. To systematically deploy clinical imaging services to low-resource settings requires contributions from a variety of disciplines such as clinical radiology, epidemiology, public health, finance, radiation physics, information technology, engineering, and others. This book will review critical concepts for those interested in managing, establishing, or participating in a medical imaging program for resource-limited environments and diverse cross-cultural contexts undergoing imaging technology adaptation.

Understanding Automated Insulin Delivery Dana M Lewis,2020-08-04 Automated insulin delivery is a new type of technology that uses an algorithm (a set of rules) based on continuous glucose monitor data and insulin pump data to decide whether an insulin pump should give more or less insulin. This book explains the basics of scuba diving and uses it as an analogy for how an automated insulin delivery system makes small changes to manage blood glucose levels, similar to how a scuba diver makes small changes to manage their balance (called buoyancy) in the water. This book can be used to help explain diabetes technology to kids, their friends and schoolmates, and even your family members to help them understand how this technology helps make living with diabetes easier.

Caroline's Kitchen Torben Betts,2018-06-06 Monogamy means sharing your life with one person, but what if you shared your kitchen with 5.6 million? Caroline Mortimer, the nation's favourite TV cook, has it all – a sparkling career, a big house in Highgate, a (golf) loving husband, smart kids and the best kitchen money can buy. But beneath the immaculate furnishings, studio lighting and away from the glare of the ever-present cameras – Caroline must face the looming collision of living a private life in the public eye. What happens when the cameras turn off and the truth comes out? Caroline's Kitchen serves up deft dialogue in absurd situations: Betts paints a wonderfully lurid picture of the middle classes, juxtaposed with the fragility of those who serve them (The Stage). First performed as Monogamy at Malvern Theatre starring Janie Dee, it then embarked on a national tour. It is a searing, sharp, state of the nation comedy from one of the UK's most exciting playwrights, Torben Betts.

The Ethics of Biomedical Big Data Brent Daniel Mittelstadt,Luciano Floridi,2016-08-03 This book presents cutting edge research on the new ethical challenges posed by biomedical Big Data technologies and practices. 'Biomedical Big Data' refers to the analysis of aggregated, very large datasets to improve medical knowledge and clinical care. The book describes the ethical problems posed by aggregation of biomedical datasets and re-use/re-purposing of data, in areas such as privacy, consent, professionalism, power relationships, and ethical governance of Big Data platforms. Approaches and methods are discussed that can be used to address these problems to achieve the appropriate balance between the social goods of biomedical Big Data research and the safety and privacy of individuals. Seventeen original contributions analyse the ethical, social and related policy implications of the analysis and curation of biomedical Big Data, written by leading experts in the areas of biomedical research, medical and technology ethics, privacy, governance and data protection. The Cambridge Handbook of Surveillance Law David Gray,Stephen E. Henderson,2017-10-12 Surveillance presents a conundrum: how to ensure safety, stability, and efficiency while respecting privacy and individual liberty. From police officers to corporations to intelligence agencies, surveillance law is tasked with striking this difficult and delicate balance. That challenge is compounded by ever-changing technologies and evolving social norms. Following the revelations of Edward Snowden and a host of private-sector controversies, there is intense interest among policymakers, business leaders, attorneys, academics, students, and the public regarding legal, technological, and policy issues relating to surveillance. This handbook documents and organizes these conversations, bringing together some of the most thoughtful and impactful contributors to contemporary surveillance debates, policies, and practices. Its pages explore surveillance techniques and technologies; their value for law enforcement, national security, and private enterprise; their impacts on citizens and communities; and the many ways societies do - and should - regulate surveillance.

Now revised and in its third edition, this text meets the growing demand by practitioners, researchers, and students for a comprehensive introduction to key topics in the field. Authored by leaders in medical informatics and extensively tested in their courses, the chapters in this volume constitute an effective textbook for students of medical informatics and its areas of application. The book is also a useful reference work for individual readers needing to understand the role that computers can play in the provision of clinical services and the pursuit of biological questions. Case Studies in Global School Health Promotion Cheryl Vince Whitman,Carmen E. Aldinger,2009-04-29 A growing body of research identifies strong links between children's health, social

and educational outcomes; it also notes the reciprocal benefits of access to quality education on individual and family health status. In response to these findings, the World Health Organization developed the concept of the Health-Promoting School (HPS), a living catalyst for healthy lives, and for positive changes that students can take home and into the community. Case Studies in Global School Health Promotion provides readers with a theoretical and research base needed to understand the methods used in communities all over the world to put this captivating concept in place. Case examples from over two dozen countries (representing urban and rural areas in developing and developed nations) outline the strategies taken to implement HPS programs in individual schools, municipalities, and nations. For each program, case study authors explain the problems they tackled, their motivation and supports to respond creatively; and the barriers they faced. In the cases, authors describe the capacities and infrastructure they created and mechanisms for cooperation; as well as the personnel, financial, and time requirements involved. Case studies were drawn from the following regions: Africa The Americas Europe Eastern Mediterranean South and Southeast Asia Western Pacific. Case Studies in Global School Health Promotion offers a world of insights, ideas, and guidance to those addressing social determinants of health at this formative stage, including: education and health policy makers; professionals and administrators; and researchers in national governments, universities, local schools, community, non-governmental organizations and civil society. The material provides interesting and useful information to those dedicated to these issues within WHO, FRESH Partners and other United Nations agencies. It is also an instructive text for graduate students in public health, education, allied health professions and social sciences.

Improving Maternal and Reproductive Health in South Asia Sameh El-Saharty,Sadia Chowdhury,Naoko Ohno,Intissar Sarker,2016-11-29 South Asia Region (SAR) has decreased maternal mortality ratio (MMR) by 65 percent between 1990 and 2013, which was the greatest progress among all world regions. Such achievement implores the question, What made SAR stand out against what is predicted by standard socioeconomic outcomes? Improving Maternal and Reproductive Health in South Asia: Drivers and Enablers identifies the interventions and factors that contributed to reducing MMR and improving maternal and reproductive health (MRH) outcomes in SAR. In this study, the analytical framework assumes that improving MRH outcomes is influenced by a multitude of forces from within and outside the health system and considers factors at the household and community levels, as well as interventions in other sectors and factors in the enabling environment. The analysis is based on a structured literature review of the interventions in SAR countries, relevant international experience, and review of the best available evidence from systematic reviews. The focus of the analysis is mainly on assessing the effectiveness of interventions. The findings from this study indicate that the most effective interventions that prevent maternal mortality are those that address the intra-partum stage - the point where most maternal deaths occur - and include improving skilled birth attendance coverage, increasing institutional delivery rates, and scaling up access to emergency obstetric care. There is also adequate evidence that investing in family planning to increase contraceptive use also played a key role during the inter-partum phase by preventing unwanted pregnancies and thus averting the risk of maternal mortality in SAR countries. Outside the programmatic interventions, the levels of household income, women's education, and completion of secondary education of girls were also strongly correlated with improved MRH outcomes. Also, there is strong evidence that health financing schemes - both demand and supply side - and conditional cash transfer programs were effective in increasing the uptake of MRH services. The study points out to many other interventions with different degrees of effectiveness. The study also identified four major reasons for why SAR achieved this progress in MMR reduction. The best practices and evidence of what works synthesized in this study provide an important way forward for low- and middle-income countries toward achieving the health-related Sustainable Development Goals.
