Astrophotography on the Go Joseph Ashley,2014-10-03 No longer are heavy, sturdy, expensive mounts and tripods required to photograph deep space. With today's advances in technology, all that is required is an entry-DSLR and an entry level GoTo telescope. Here is all of the information needed to start photographing the night sky without buying expensive tracking mounts. By using multiple short exposures and combining them with mostly 'freeware' computer programs, the effect of image rotation can be minimized to a point where it is undetectable in normal astrophotography, even for a deep-sky object such as a galaxy or nebula. All the processes, techniques, and equipment needed to use inexpensive, lightweight altazimuth and equatorial mounts and very short exposures photography to image deep space objects are explained, step-by-step, in full detail, supported by clear, easy to understand graphics and photographs. Currently available lightweight mounts and tripods are identified and examined from an economic versus capability perspective to help users determine what camera, telescope, and mount is the best fit for them. A similar analysis is presented for entry-level telescopes and mounts sold as bundled packages by the telescope manufacturers. This book lifts the veil of mystery from the creation of deep space photographs and makes astrophotography affordable and accessible to most amateur astronomers.

A Compendium of Miniature Orchid Species Ron Parsons,Mary E. Gerritsen,2013 Orchids represent probably the largest of all flowering plantfamilies on Earth and are renowned the world over for their exquisite flowers. Their remarkable blooms occur in all manner of size and shape, and orchid flowers range from some of the smallest and most diminutive in the plant kingdom to some of the largest and most flamboyant. Historically, the most popular orchids in cultivation have been those with large, showy flowers, however a significant proportion of known orchid species are far smaller. Within this group lie the true jewels of the orchid family, the miniature orchid species, which can produce some of the most unusual and often spectacular flowers of all. This two volume work, A Compendium of Miniature Orchid Species, presents a richly illustrated insight into the very finest epiphytic and lithophytic miniature orchids currently in cultivation, focusing not only on those species with remarkable flowers, but also the many species that are grown for their striking leaf and plant forms. Produced with both novices and experts in mind, this exhaustive and accessibly written work features individual entries for over 500 different species across more than 120 genera. Each species entry includes nomenclatural and etymological information, as well as cultivation guidance and notes about habitat, conservation status and similarities to other orchids. The species entries also incorporate newly published taxonomic data that is also reflected in the extensive cross-index of orchid names and synonyms, and all species are generously represented with numerous photographs, including images of other species with which they are easily confused.

The Nutshell Studies of Unexplained Death Corinne May Botz,2004-09-28 The Nutshell Studies of Unexplained Death offers readers an extraordinary glimpse into the mind of a master criminal investigator. Frances Glessner Lee, a wealthy grandmother, founded the Department of Legal Medicine at Harvard in 1936 and was later appointed captain in the New Hampshire police. In the 1940s and 1950s she built dollhouse crime scenes based on real cases in order to train detectives to assess visual evidence. Still used in forensic training today, the eighteen Nutshell dioramas, on a scale of 1:12, display an astounding level of detail: pencils write, window shades move, whistles blow, and clues to the crimes are revealed to those who study the scenes carefully. Corinne May Botz's lush color photographs lure viewers into every crevice of Frances Lee's models and breathe life into these deadly miniatures, which present the dark side of domestic life, unveiling tales of prostitution, alcoholism, and adultery. The accompanying line drawings, specially prepared for this volume, highlight the noteworthy forensic evidence in each case. Botz's introductory essay, which draws on archival research and interviews with Lee's family and police colleagues, presents a captivating portrait of Lee.

Handbook of Electronic Security and Digital Forensics Hamid Jahankhani, 2010 The widespread use of information and communications technology (ICT) has created a global platform for the exchange of ideas, goods and services, the benefits of which are enormous. However, it has also created boundless opportunities for fraud and deception. Cybercrime is one of the biggest growth industries around the globe, whether it is in the form of violation of company policies, fraud, hate crime, extremism, or terrorism. It is therefore paramount that the security industry raises its game to combat these threats. Today's top priority is to use computer technology to fight computer crime, as our commonwealth is protected by firewalls rather than firepower. This is an issue of global importance as new technologies have provided a world of opportunity for criminals. This book is a compilation of the collaboration between the researchers and practitioners in the security field; and provides a comprehensive literature on current and future e-security needs across applications, implementation, testing or investigative techniques, judicial processes and criminal intelligence. The intended audience includes members in academia, the public and private sectors, students and those who are interested in and will benefit from this handbook.

Museum Transformations Annie E. Coombes, Ruth B. Phillips, 2020-11-19 MUSEUM TRANSFORMATIONS DECOLONIZATION AND DEMOCRATIZATION Edited By ANNIE E. COOMBES AND RUTH B. PHILLIPS *Museum Transformations: Decolonization and Democratization* addresses contemporary approaches to decolonization, greater democratization, and revisionist narratives in museum exhibition and program development around the world. The text explores how museums of art, history, and ethnography responded to deconstructive critiques from activists and poststructuralist and postcolonial theorists, and provided models for change to other types of museums and heritage sites. The volume's first set of essays discuss the role of the museum in the narration of difficult histories, and how altering the social attitudes and political structures that enable oppression requires the recognition of past histories of political and racial oppression and colonization in museums. Subsequent essays consider the museum's new roles in social action and discuss experimental projects that work to change power dynamics within institutions and leverage digital technology and new media.
