One Cool Friend Toni Buzzeo, 2012-01-10 2013 Caldecott Honor Book. From New York Times bestselling author Toni Buzzeo and Caldecott Medal winning illustrator David Small, comes a cool tale about an unlikely friendship. On a spontaneous visit to the aquarium, straight-laced and proper Elliot discovers his dream pet: a penguin. When he asks his father if he may have one (please and thank you), his father says yes. Elliot should have realized that Dad was probably thinking of a toy penguin, not a real one... Clever illustrations and a wild surprise ending make this sly, silly tale a kid-pleaser from start to finish.

The DARPA Model for Transformative Technologies: Perspectives on the U.S. Defense Advanced Research Projects Agency William Boone Bonvillian, Richard Van Atta, Patrick Windham, 2020-01-09 The authors have done a masterful job of charting the important story of DARPA, one of the key catalysts of technological innovation in US recent history. By plotting the development, achievements and structure of the leading world agency of this kind, this book stimulates new thinking in the field of technological innovation with bearing on how to respond to climate change, pandemics, cyber security and other global problems of our time. The DARPA Model provides a useful guide for governmental agency and policy leaders, and for anybody interested in the role of governments in technological innovation. —Dr. Kent Hughes, Woodrow Wilson International Center for Scholars This volume contains a remarkable collection of extremely insightful articles on the world's most successful advanced technology agency. Drafted by the leading US experts on DARPA, it provides a variety of perspectives that in turn benefit from being presented together in a comprehensive volume. It reviews DARPA's unique role in the U.S. innovation system, as well as the challenges DARPA and its clones face today. As the American model is being considered for adoption by a number of countries worldwide, this book makes a welcome and timely contribution to the policy dialogue on the role played by governments in stimulating technological innovation. — Prof. Charles Wessner, Georgetown University The U.S. Defense Advanced Research Projects Agency (DARPA) has played a remarkable role in the creation new transformative

technologies, revolutionizing defense with drones and precision-guided munitions, and transforming civilian life with portable GPS receivers, voice-recognition software, self-driving cars, unmanned aerial vehicles, and, most famously, the ARPANET and its successor, the Internet. Other parts of the U.S. Government and some foreign governments have tried to apply the 'DARPA model' to help develop valuable new technologies. But how and why has DARPA succeeded? Which features of its operation and environment contribute to this success? And what lessons does its experience offer for other U.S. agencies and other governments that want to develop and demonstrate their own 'transformative technologies'? This book is a remarkable collection of leading academic research on DARPA from a wide range of perspectives, combining to chart an important story from the Agency's founding in the wake of Sputnik, to the current attempts to adapt it to use by other federal agencies. Informative and insightful, this guide is essential reading for political and policy leaders, as well as researchers and students interested in understanding the success of this agency and the lessons it offers to others.

The Untold History of the United States, Volume 2 Oliver Stone, Peter Kuznick, 2019-01-15 Discover America's secrets in this second of two volumes of the young readers' edition of *The Untold History of the United States*, from Academy Award-winning director Oliver Stone and Peter Kuznick, adapted by Eric Singer. There is history as we know it. And there is history we should have known. Complete with poignant photos and little-known but vitally important stories, this second of two volumes traces how people around the world responded to the United States's rise as a superpower from the end of World War II through an increasingly tense Cold War and, eventually, to the brink of

nuclear annihilation during the Cuban Missile Crisis. This is not the kind of history taught in schools or normally presented on television or in popular movies. This riveting young readers volume challenges prevailing orthodoxies to reveal uncomfortable realities about the US role in heightening Cold War tensions. It also humanizes the experiences of diverse people, at home and abroad, who yearned for a more just, equal, and compassionate world. This volume will come as a breath of fresh air for students, teachers, and budding young historians hungry for different perspectives—which makes it a crucial counterpoint to today’s history textbooks. Adapted by high school and university educator Eric S. Singer from the bestselling book and companion to the documentary *The Untold History of the United States* by Academy Award-winning director Oliver Stone and renowned historian Peter Kuznick, this volume gives young readers a powerful and provocative look at the US role in the Cold War. It also provides a blueprint for those concerned with shaping a better and more equitable future for people across the world.

Urban Rage Mustafa Dikeç, 2017-11-07 A timely and incisive examination of contemporary urban unrest that explains why riots will continue until citizens are equally treated and politically included In the past few decades, urban riots have erupted in democracies across the world. While high profile politicians often react by condemning protestors' actions and passing crackdown measures, urban studies professor Mustafa Dikeç shows how these revolts are in fact rooted in exclusions and genuine grievances which our democracies are failing to address. In this eye-opening study, he argues that global revolts may be sparked by a particular police or government action but nonetheless are expressions of much longer and deep seated rage accumulated through hardship and injustices that have become routine. Increasingly recognized as an expert on urban unrest, Dikeç examines urban revolts in the United States, United Kingdom, France, Sweden, Greece, and Turkey and, in a sweeping and engaging account, makes it clear that change is only possible if we address the failures of democratic systems and rethink the established practices of policing and political decision-making.

The National Interest in Question Christopher Hill, 2013-08-22 This volume examines the interaction between foreign policy-making and multicultural societies. It analyses the challenges of rapid social change associated with inward migration and increased ethnic and cultural diversity in ten EU Member States.

Handbook on Complexity and Public Policy Robert Geyer, Paul Cairney, 2015-05-29 'Over recent years Complexity Science has revealed to us new limits to our possible

knowledge and control in social, cultural and economic systems. Instead of supposing that past statistics and patterns will give us predictable outcomes for possible actions, we now know the world is, and will always be, creative and surprising. Continuous structural evolution within such systems may change the mechanisms, descriptors, problems and opportunities, often negating policy aims. We therefore need to redevelop our thinking about interventions, policies and policy making, moving perhaps to a humbler, more 'learning' approach. In this Handbook, leading thinkers in multiple domains set out these new ideas and allow us to understand how these new ideas are changing policymaking and policies in this new era.' - Peter M Allen, Cranfield University, UK

The Creation of Markets for Ecosystem Services in the United States Mattijs van Maasakkers,2016-11-01 The Creation of Markets for Ecosystem Services in the United States is a detailed analysis of the most advanced efforts to create markets for ecosystem services in the United States. With the help of in-depth case studies of three well-known attempts to create such markets--in the Chesapeake Bay watershed, the Ohio River basin and the Willamette River basin--the book explains why very few of these markets have actually succeeded even after close to two decades of much scholarly enthusiasm, significant federal funding and concerted efforts by NGOs, government agencies and private businesses. Based on interviews, policy analysis and participatory observation, three features of markets for ecosystem services emerge as particularly problematic. First, the logic of displacement or the idea that particular elements of an ecosystem can be separated and traded across landscapes or watersheds runs counter to political interests,

environmental beliefs and people's connections to specific places. The second problem is that of measurement. Quantification methods embed a range of often contentious assumptions and decisions about what counts when restoring ecosystems. The third problem is related to participation in environmental decision-making.

Airline Operations and Management Gerald N. Cook, Bruce G. Billig, 2023-05-04
Airline Operations and Management: A Management Textbook presents a survey of the airline industry, with a strong managerial perspective. It integrates and applies the fundamentals of several management disciplines, particularly operations, marketing, economics and finance, to develop a comprehensive overview. It also provides readers with a solid historical background, and offers a global perspective of the industry, with examples drawn from airlines around the world. Updates for the second edition include: Fresh data and examples A range of international case studies exploring real-life applications New or increased coverage of key topics such as the COVID-19 pandemic, state aid, and new business models New chapters on fleet management and labor relations and HRM Lecture slides for instructors This textbook is for advanced undergraduate and graduate students of airline management, but it should also be useful to entry and junior-level airline managers and professionals seeking to expand their knowledge of the industry beyond their functional area.

Seven Wonders of the Solar System David A. Aguilar, 2017-05-30 Ready for a wondrous celestial journey? This extraordinary book puts you right there in the middle of our solar system: breaking through colorful gaseous hazes; exploring the surface of red-hot or ice-cold planets; hurtling through rings of flying, frozen ice chunks; and rocketing

on out to deep space. Astronomer David Aguilar is our navigator on these seven wonderful trips through space—journeys that someday may actually happen!

The Signal and the Noise Nate Silver, 2012-09-27 One of the more momentous books of the decade. —The New York Times Book Review Nate Silver built an innovative system for predicting baseball performance, predicted the 2008 election within a hair's breadth, and became a national sensation as a blogger—all by the time he was thirty. He solidified his standing as the nation's foremost political forecaster with his near perfect prediction of the 2012 election. Silver is the founder and editor in chief of the website FiveThirtyEight. Drawing on his own groundbreaking work, Silver examines the world of prediction, investigating how we can distinguish a true signal from a universe of noisy data. Most predictions fail, often at great cost to society, because most of us have a poor understanding of probability and uncertainty. Both experts and laypeople mistake more confident predictions for more accurate ones. But overconfidence is often the reason for failure. If our appreciation of uncertainty improves, our predictions can get better too. This is the “prediction paradox”: The more humility we have about our ability to make predictions, the more successful we can be in planning for the future. In keeping with his own aim to seek truth from data, Silver visits the most successful forecasters in a range of areas, from hurricanes to baseball to global pandemics, from the poker table to the stock market, from Capitol Hill to the NBA. He explains and evaluates how these forecasters think and what bonds they share. What lies behind their success? Are they good—or just lucky? What patterns have they unraveled? And are their forecasts really right? He explores unanticipated commonalities and exposes unexpected juxtapositions. And

sometimes, it is not so much how good a prediction is in an absolute sense that matters but how good it is relative to the competition. In other cases, prediction is still a very rudimentary—and dangerous—science. Silver observes that the most accurate forecasters tend to have a superior command of probability, and they tend to be both humble and hardworking. They distinguish the predictable from the unpredictable, and they notice a thousand little details that lead them closer to the truth. Because of their appreciation of probability, they can distinguish the signal from the noise. With everything from the health of the global economy to our ability to fight terrorism dependent on the quality of our predictions, Nate Silver's insights are an essential read.
