Dinosaur Goes to Israel Diane Levin Rauchwerger, 2014-01-01

Dino's adventures continue as he boards a plane for Israel. He munches on falafel, tucks a message high up on the Western Wall, and invites a friendly camel to go snorkeling in Eilat. Kids will chuckle at his comic escapades as a tourist.

Five of the most recognizable dinosaurs are featured: Brachiosaurus, Stegosaurus, Triceratops, Tyrannosaurus Rex, and Velociraptor. No scary dinos here, though. Each and every one is certified preschooler-friendly. Designed especially with the pint-sized crowd in mind, Dinosaurs is one mini AniMotion book packed with adventures of prehistoric proportions.

**Explorers of Deep Time** Roy Plotnick, 2022-01-04 Paleontology is one of the most visible yet most misunderstood fields of science. Children dream of becoming paleontologists when they grow up. Museum visitors flock to exhibits on dinosaurs and other prehistoric animals. The media reports on fossil discoveries and new clues to mass extinctions. Nonetheless, misconceptions abound: paleontologists are assumed only to be interested in dinosaurs, and they are all too often imagined as bearded white men in battered cowboy hats. Roy Plotnick provides a behind-the-scenes look at paleontology as it exists today in all its complexity. He explores the field's aims, methods, and possibilities, with an emphasis on the compelling personal stories of the scientists who have made it a career. Paleontologists study the entire history of life on Earth; they do not only use hammers and chisels to unearth fossils but are just as likely to work with cutting-edge computing technology. Plotnick presents the big questions about life's history that drive paleontological research and shows why knowledge of Earth's past is essential to understanding present-day environmental crises. He introduces readers to the diverse group of people of all genders, races, and international backgrounds who make up the twenty-first-century paleontology community, foregrounding their perspectives and firsthand narratives. He also frankly discusses the many challenges that face the profession, with key takeaways for aspiring scientists. Candid and comprehensive, *Explorers of Deep*

Time is essential reading for anyone curious about the everyday work of real-life paleontologists.

Locked in Time Dean R. Lomax, Robert Nicholls, 2021-05-18 Fossils allow us to picture the forms of life that inhabited the earth eons ago. But we long to know more: how did these animals actually behave? We are fascinated by the daily lives of our fellow creatures—how they reproduce and raise their young, how they hunt their prey or elude their predators, and more. What would it be like to see prehistoric animals as they lived and breathed? From dinosaurs fighting to their deaths to elephant-sized burrowing ground sloths, this book takes readers on a global journey deep into the earth's past. Locked in Time showcases fifty of the most astonishing fossils ever found, brought together in five fascinating chapters that offer an unprecedented glimpse at the real-life behaviors of prehistoric animals. Dean R. Lomax examines the extraordinary direct evidence of fossils captured in the midst of everyday action, such as dinosaurs sitting on their eggs like birds, Jurassic flies preserved while mating, a T. rex infected by parasites. Each fossil, he reveals, tells a unique story about prehistoric life. Many recall behaviors typical of animals familiar to us today, evoking the chain of evolution that links all living things to their distant ancestors. Locked in Time allows us to see that fossils are not just inanimate objects: they can record the life stories of creatures as fully alive as any today. Striking and scientifically rigorous illustrations by renowned paleoartist Bob Nicholls bring these breathtaking moments to life.

*Soundings* Hali Felt,2013-07-02 Her maps of the ocean floor have been called one of the most remarkable achievements in modern cartography, yet no one knows her name. *Soundings* is the story of the enigmatic, unknown woman behind one of the greatest achievements of the 20th century. Before Marie Tharp, geologist and gifted draftsman, the whole world, including most of the scientific community, thought the ocean floor was a vast expanse of nothingness. In 1948, at age 28, Marie walked into the newly formed geophysical lab at Columbia University and practically demanded a job. The scientists at the lab were all male; the women who worked there were relegated to secretary or assistant. Through sheer willpower and obstinacy, Marie was given the job of interpreting the

soundings (records of sonar pings measuring the ocean's depths) brought back from the ocean-going expeditions of her male colleagues. The marriage of artistry and science behind her analysis of this dry data gave birth to a major work: the first comprehensive map of the ocean floor, which laid the groundwork for proving the then-controversial theory of continental drift. When combined, Marie's scientific knowledge, her eye for detail and her skill as an artist revealed not a vast empty plane, but an entire world of mountains and volcanoes, ridges and rifts, and a gateway to the past that allowed scientists the means to imagine how the continents and the oceans had been created over time. Just as Marie dedicated more than twenty years of her professional life to what became the Lamont Geological Observatory, engaged in the task of mapping every ocean on Earth, she dedicated her personal life to her great friendship with her co-worker, Bruce Heezen. Partners in work and in many ways, partners in life, Marie and Bruce were devoted to one another as they rose to greater and greater prominence in the scientific community, only to be envied and finally dismissed by their beloved institute. They went on together, refining and perfecting their work and contributing not only to humanity's vision of the ocean floor, but to the way subsequent generations would view the Earth as a whole. With an imagination as intuitive as Marie's, brilliant young writer Hali Felt brings to vivid life the story of the pioneering scientist whose work became the basis for the work of others scientists for generations to come.

**Star Wars Origami** ,2012-08-07 Kids love origami—and what could be cooler than transforming a piece of paper into Boba Fett, Princess Leia, Yoda, or R2-D2? And not just any paper, but custom-designed paper illustrated with art from the movies. Star Wars® Origami

marries the fun of paper folding with the obsession of Star Wars. Like *The Joy of Origami* and *Origami on the Go*, this book puts an original spin on an ancient art. And like *Star Wars® Scanimation®* and *Star Wars® Fandex®*, it's a fresh take on Star Wars mania. Chris Alexander is a master folder and founder of the popular website *StarWarsOrigami.com*, and here are 36 models, clearly explained, that range in difficulty from Youngling (easy) to Padawan (medium), Jedi Knight (difficult), and Jedi Master (tricky!). A front section introduces origami definitions and basic folds. Bound in the back is the book's unique folding paper, two sheets for each figure. Illustrated with original art, it makes each creation—the essential lightsabers, the Death Star, and much more—true to the movies. *Star Wars Origami* includes a foreword by Tom Angleberger, author of the New York Times bestsellers *The Strange Case of Origami Yoda* and *Darth Paper Strikes Back*, and is scheduled to be published at the same time as Angleberger's upcoming book, *The Secret of the Fortune Wookiee*.

**Cows of Our Planet** Gary Larson, 1992 This new collection of cartoons is a bovine celebration of the author's fascination with cows.

**The Biggest Burp Ever** Kenn Nesbitt, 2018-10-27 Children's Poet Laureate Kenn Nesbitt is back with more of the raucous rhymes and zany zingers that kids love to read. *The Biggest Burp Ever* includes seventy new poems about wacky animals, comical characters, funny families, silly situations, and much, much more.

*The Dinosaur Four* Geoff Jones, Dave Kang, Sandstone Editing, 2014-05-24 They came for the coffee and wound up in the Cretaceous. A ticking sound fills the air as Tim MacGregor enters The Daily Edition Cafe, hoping to meet his new girlfriend for coffee. Moments later, a chunk of building is transported 67 million years back in time, along with everyone inside. Ten unlikely companions

find themselves in a world of dinosaurs and prehistoric reptiles. Several survivors compete for leadership as they search for a way home, while one member of the group plots to keep them all trapped in the past...

### **Wildlife Preserves: A Far Side Collection ,**

How Do Dinosaurs Learn to Read? Jane Yolen, 2018 Told in rhyming text young dinosaurs learn to read, but only after many mishaps, like chewing their books and throwing them at the cat--but eventually they learn to respect their books, and treat them properly.

### **The Plesiosaur's Neck** Jonathan Emmett, Dr Adam S.

Smith, 2021-05-06 There's one thing about her that's hard to ignore, THAT RIDICULOUS NECK! What on Earth was it for? Poppy the plesiosaur had a preposterously long neck - but what was it for? Did she use it to pluck off pesky parasites, to zap predators with electricity or to ambush unlucky fish? From the brilliant minds of world-renowned plesiosaur expert Dr Adam S. Smith, award-winning author Jonathan Emmett and illustrator Adam Larkum.
