Fundamentals of Aircraft and Rocket Propulsion
Ahmed F. El-Sayed, 2016-05-25 This book provides a comprehensive basics-to-advanced course in an aero-thermal science vital to the design of engines for either type of craft. The text classifies engines powering aircraft and single/multi-stage rockets, and derives performance parameters for both from basic aerodynamics and thermodynamics laws. Each type of engine is analyzed for optimum performance goals, and mission-appropriate engines selection is explained. *Fundamentals of Aircraft and Rocket Propulsion* provides information about and analyses of: thermodynamic cycles of shaft engines (piston, turboprop, turboshaft and propfan); jet engines (pulsejet, pulse detonation engine, ramjet, scramjet, turbojet and turbofan); chemical and non-chemical rocket engines; conceptual design of modular rocket engines (combustor, nozzle and turbopumps); and conceptual design of different modules of aero-engines in their design and off-design state. Aimed at graduate and final-year undergraduate students, this textbook provides a thorough grounding in the history and classification of both aircraft and rocket engines, important design features of all the engines detailed, and particular consideration of special aircraft such as unmanned aerial and

short/vertical takeoff and landing aircraft. End-of-chapter exercises make this a valuable student resource, and the provision of a downloadable solutions manual will be of further benefit for course instructors.

The Adula Alps William Augustus Brevoort Coolidge, Coolidge, 1893

The Test of Our Times Tom Ridge, Lary Bloom, 2009-09-01 When our nation called, Tom Ridge answered. Appointed by the President to head up domestic security, Ridge established the Department of Homeland Security. In this probing and surefooted memoir, Ridge takes us through the challenges he and his new department faced, including Anthrax scares and reports (both real and false alarms) of new Al-Qaeda operations sprouting up in the United States. A law and order Republican who was on the shortlist to be John McCain's running mate in 2008, Ridge writes with refreshing candor on both the successes and missteps of the DHS. He details the obstacles faced in his new post—often within the administration itself—as well as the failures of Congress to provide for critical homeland security needs, and the irresponsible use of terrorism by both parties to curry favors with voters. Ridge also reveals:

- How the DHS was pressured to connect homeland security to the international war on terror
- How Ridge effectively thwarted a plan to raise the national security alert just before the 2004 Election
- How Ridge had pushed for a plan (defeated because of turf wars) to integrate DHS and FEMA disaster management in New Orleans and other areas before Hurricane Katrina

Finally,

Ridge offers a prescriptive look to the future, advocating ways that America may reaffirm its safety—including his provocative support for a national ID card program and for comprehensive immigration reform—without sacrificing personal liberty. Television captures every word and every expression. I was reasonable to think that our enemies would look for any sign of weakness in the person who in a few days would be responsible for protecting America against them. At that moment, I experienced a royal flush of emotion—after all, I was leaving the state I loved, a loyal staff, many friendships developed over a lifetime, the frustration of work unfinished, to head into the unknown and the undoable. In normal times, I might have shed a tear at such thoughts. But I was determined not to do so as I said my farewell. If I needed any reminding, I glanced down at the note I had written for counsel. The bastards are watching. We can never guarantee we will be free from another attack. We must also understand that every day thousands and thousands of our fellow citizens work here and abroad to take us to a new level of readiness and security. For in the end, Americans do not live in fear. We live in freedom. And we will let no one take that freedom away.

Sensing Changes Joy Parr,2010-07-01 Our bodies are archives of sensory knowledge that shape how we understand the world. If our environment changes at an unsettling pace, how will we make sense of a world that is no longer familiar? One

of Canada's premier historians tackles this question by exploring situations in the recent past where state-driven megaprojects and regulatory and technological changes forced ordinary people to cope with transformations that were so radical that they no longer recognized their home and workplaces or, by implication, who they were. In concert with a ground-breaking, creative, and analytical website, megaprojects.uwo.ca, this timely study offers a prescient perspective on how humans make sense of a rapidly changing world.

Basic Helicopter Aerodynamics John M.

Seddon,Simon Newman,2011-06-09 Basic Helicopter Aerodynamics is widely appreciated as an easily accessible, rounded introduction to the first principles of the aerodynamics of helicopter flight. Simon Newman has brought this third edition completely up to date with a full new set of illustrations and imagery. An accompanying website www.wiley.com/go/seddon contains all the calculation files used in the book, problems, solutions, PPT slides and supporting MATLAB® code. Simon Newman addresses the unique considerations applicable to rotor UAVs and MAVs, and coverage of blade dynamics is expanded to include both flapping, lagging and ground resonance. New material is included on blade tip design, flow characteristics surrounding the rotor in forward flight, tail rotors, brown-out, blade sailing and shipborne operations. Concentrating on the well-

known Sikorsky configuration of single main rotor with tail rotor, early chapters deal with the aerodynamics of the rotor in hover, vertical flight, forward flight and climb. Analysis of these motions is developed to the stage of obtaining the principal results for thrust, power and associated quantities. Later chapters turn to the characteristics of the overall helicopter, its performance, stability and control, and the important field of aerodynamic research is discussed, with some reference also to aerodynamic design practice. This introductory level treatment to the aerodynamics of helicopter flight will appeal to aircraft design engineers and undergraduate and graduate students in aircraft design, as well as practising engineers looking for an introduction to or refresher course on the subject.
