Midnight in Chernobyl Adam Higginbotham, 2020-02-04 A New York Times Best Book of the Year A Time Best Book of the Year A Kirkus Reviews Best Nonfiction Book of the Year 2020 Andrew Carnegie Medals for Excellence Winner From journalist Adam Higginbotham, the New York Times bestselling “account that reads almost like the script for a movie” (The Wall Street Journal)—a powerful investigation into Chernobyl and how propaganda, secrecy, and myth have obscured the true story of one of the history’s worst nuclear disasters. Early in the morning of April 26, 1986, Reactor Number Four of the Chernobyl Atomic Energy Station exploded, triggering one of the twentieth century’s greatest disasters. In the thirty years since then, Chernobyl has become lodged in the collective nightmares of the world: shorthand for the spectral horrors of radiation poisoning, for a dangerous technology slipping its leash, for ecological fragility, and for what can happen when a dishonest and careless state endangers its citizens and the entire world. But the real story of the accident, clouded from the beginning by secrecy, propaganda, and misinformation, has long remained in dispute. Drawing on hundreds of hours of interviews conducted over the course of more than ten years, as well as letters, unpublished memoirs, and documents from recently-declassified archives, Adam Higginbotham brings the disaster to life through the eyes of

the men and women who witnessed it firsthand. The result is a “riveting, deeply reported reconstruction” (Los Angeles Times) and a definitive account of an event that changed history: a story that is more complex, more human, and more terrifying than the Soviet myth. “The most complete and compelling history yet” (The Christian Science Monitor), Higginbotham’s “superb, enthralling, and necessarily terrifying...extraordinary” (The New York Times) book is an indelible portrait of the lessons learned when mankind seeks to bend the natural world to his will—lessons which, in the face of climate change and other threats, remain not just vital but necessary.

Design of Brushless Permanent-magnet Machines J. R. Hendershot, Timothy John Eastham Miller, 2010-01-01 Brushless permanent-magnet motors provide simple, low maintenance, and easily controlled mechanical power. Written by two leading experts on the subject, this book offers the most comprehensive guide to the design and performance of brushless permanent-magnetic motors ever written. Topics range from electrical and magnetic design to materials and control. Throughout, the authors stress both practical and theoretical aspects of the subject, and relate the material to modern software-based techniques for design and analysis. As new magnetic materials and digital power control techniques continue to widen the scope of the applicability of such motors, the need for an authoritative overview of the subject becomes ever more urgent. *Design of Brushless Permanent-Magnet Motors* fits the bill and will be read by students and researchers in electric and electronic engineering.

It Can't Be True! 2 DK, 2016-09-13 All the amazing facts in this book are strange but true. With clever, yet easy-to-understand visual comparisons, you will make sense of things that seem too bizarre to be real. In *It Can't Be True! 2*, you can see a hippo's mouth large enough to swallow a car, a truck

strong enough to carry 90 elephants, and a jellyfish longer than three blue whales. Plus, did you know that all the world's continents could fit into the Pacific Ocean? Or that all the world's trees could fill North and South America combined? These concepts are brought to life with fascinating CGI artworks. Find out how much paper you'd need to print out the World Wide Web (hint: it's a stack taller than the height of Earth's globe), how much sweat your feet produce in a day (it could fill a glass), and much more in this collection of weird facts and world records from planet Earth and space, animals and plants, people, and technology. If you think it can't be true, It Can't Be True! 2 will prove that it is!

Recordmania: Atlas of the Incredible, 2018-08-30 The biggest, the strongest, the fastest, the loudest--Recordmania sets the bar for the best atlas of the world's incredible records. From mind-boggling feats of human endurance to the unimaginable extremes of the natural world, these pages are filled with records that defy expectations and surprise the imagination. Did you know for example that the fastest recorded skydive was so speedy it broke through the sound barrier? Or that the smallest park in the world was made for a colony of leprachauns? Split into 6 categories and covering everything from sports, architecture, animals, humans, technology, dinosaurs, space, and nature, each category is packed with feats that will delight. Trace out locations across each atlas before delving into the detail behind each record. Recordmania: Atlas of the Incredible is cleverly designed and

thoughtfully illustrated, the perfect gift for the curious-minded.

Five Hundred Years of Printing Sigfrid Henry Steinberg, 1996 This classic work, first published as a Pelican Original in 1955 and maintained in successive editions until 1980 is now available in a finely illustrated larger format book, drawing on the collections and curatorial expertise of The British Library. It has been completely revised and brought up to date, covering topics such as censorship, best-sellers, the invention of lithography and the connection between printing and education. It is of particular use to anyone studying the huge technological changes that the printing industry has experienced during its long timespan.

Direct Analysis in Real Time Mass Spectrometry Yiyang Dong, 2018-04-09 Clear, comprehensive, and state of the art, the groundbreaking book on the emerging technology of direct analysis in real time mass spectrometry Written by a noted expert in the field, Direct Analysis in Real Time Mass Spectrometry offers a review of the background and the most recent developments in DART-MS. Invented in 2005, DART-MS offers a wide range of applications for solving numerous analytical problems in various environments, including food science, forensics, and clinical analysis. The text presents an introduction to the history of the technology and includes information on the theoretical background, for example on the ionization mechanism. Chapters on sampling and coupling to different types of mass spectrometers are followed by a comprehensive discussion of a broad range of

applications. Unlike most other ionization methods, DART does not require laborious sample preparation, as ionization takes place directly on the sample surface. This makes the technique especially attractive for applications in forensics and food science. Comprehensive in scope, this vital text: -Sets the standard on an important and emerging ionization technique -Thoroughly discusses all the relevant aspects from instrumentation to applications -Helps in solving numerous analytical problems in various applications, for example food science, forensics, environmental and clinical analysis -Covers mechanisms, coupling to mass spectrometers, and includes information on challenges and disadvantages of the technique Academics, analytical chemists, pharmaceutical chemists, clinical chemists, forensic scientists, and others will find this illuminating text a must-have resource for understanding the most recent developments in the field.

Places of Invention Arthur P. Molella, Anna Karvellas, 2015-06-30 The companion book to an upcoming museum exhibition of the same name, *Places of Invention* seeks to answer timely questions about the nature of invention and innovation: What is it about some places that sparks invention and innovation? Is it simply being at the right place at the right time, or is it more than that? How does “place”—whether physical, social, or cultural—support, constrain, and shape innovation? Why does invention flourish in one spot but struggle in another, even very similar location? In short: Why there? Why then? *Places of Invention* frames current and historic conversation on the relationship between place and creativity, citing extensive scholarship in the area and two decades of investigation and study from the National Museum of American History’s Lemelson Center for the Study of Invention and Innovation. The book is built around six place case studies: Hartford, CT, late 1800s; Hollywood, CA, 1930s; Medical Alley, MN, 1950s; Bronx, NY, 1970s; Silicon Valley, CA, 1970s–1980s; and Fort Collins, CO,

2010s. Interspersed with these case studies are dispatches from three “learning labs” detailing Smithsonian Affiliate museums’ work using Places of Invention as a model for documenting local invention and innovation. Written by exhibition curators, each part of the book focuses on the central thesis that invention is everywhere and fueled by unique combinations of creative people, ready resources, and inspiring surroundings. Like the locations it explores, Places of Invention shows how the history of invention can be a transformative lens for understanding local history and cultivating creativity on scales of place ranging from the personal to the national and beyond.
