Corcoran Gallery of Art Corcoran Gallery of Art, Sarah Cash, Emily Dana Shapiro, Jennifer Carson, 2011 This authoritative catalogue of the Corcoran Gallery of Art's renowned collection of pre-1945 American paintings will greatly enhance scholarly and public understanding of one of the finest and most important collections of historic American art in the world. Composed of more than 600 objects dating from 1740 to 1945.

What Nerve! Dan Nadel, Judith Tannenbaum, 2014 What Nerve! reveals a hidden history of American figurative painting, sculpture and popular imagery. It documents and/or restages four installations, spaces or happenings, in Chicago, San Francisco, Detroit and Providence, which were crucial to the development of figurative art in the United States. Several of the better-known artists in What Nerve! have been the subject of significant exhibitions or publications, but this is the first major volume to focus on the broader impact of figurative art to connect artists and collectives from different generations and regions of the country. These are: from Chicago, the Hairy Who (James Falconer, Art Green, Gladys Nilsson, Jim Nutt, Suellen Rocca, Karl Wirsum); from California, Funk artists (Jeremy Anderson, Robert Arneson, Roy De Forest, Robert Hudson, Ken Price, Peter Saul, Peter Voulkos, William T. Wiley); from Detroit, Destroy All Monsters (Mike Kelley, Cary Loren, Niagara, Jim Shaw); and from Providence, Forcefield (Mat Brinkman, Jim Drain, Leif Goldberg, Ara Peterson). Created in collaboration with artists from these groups, the historical moments at the core of What Nerve! are linked by work from six artists who profoundly influenced or were influenced by the groups: William Copley, Jack Kirby, Elizabeth Murray, Gary Panter, Christina Ramberg and H.C. Westermann. Featuring paintings, sculptures, drawings, prints, photographs and videos, as well as ephemera, wallpaper and other materials used in the reconstructed installations, the book and exhibition will broaden public exposure to the scope of this influential history. The

exuberance, humor and politics of these artworks remain powerfully resonant. Much of the work in this book, including installation photos, exhibition ephemera and correspondence, is published for the first time. What Nerve! represents the first historical examination of the circumstances, relationships and works of an increasingly important lineage of American artists.

How Tobacco Smoke Causes Disease ,2010 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.

Root Ecology Hans de Kroon,Eric J.W. Visser,2013-06-29 In the course of evolution, a great variety of root systems have learned to overcome the many physical, biochemical and biological problems brought about by soil. This development has made them a fascinating object of scientific study. This volume gives an overview of how roots have adapted to the soil environment and which roles they play in the soil ecosystem. The text describes the form and function of roots, their temporal and spatial distribution, and their turnover rate in various ecosystems. Subsequently, a physiological background is provided for basic functions, such as carbon acquisition, water and solute movement, and for their responses to three major abiotic stresses, i.e. hard soil structure, drought and flooding. The volume concludes with the interactions of roots with other organisms of the complex soil ecosystem, including symbiosis, competition, and the function of roots as a food source.

French Rococo Ébénisterie in the J. Paul Getty Museum
Gillian Wilson,Arlen Heginbotham,2021-03-30 The first comprehensive catalogue of the Getty Museum's significant collection of French Rococo ébénisterie furniture. This catalogue focuses on French ébénisterie furniture in the Rococo style dating from 1735 to 1760. These splendid objects directly reflect the tastes of the Museum's founder, J. Paul Getty, who started collecting in this area in 1938 and continued until his death in 1976. The Museum's collection is particularly rich in examples created by the most talented cabinet masters then active in Paris, including Bernard van Risenburgh II (after 1696-ca. 1766), Jacques

Dubois (1694–1763), and Jean-François Oeben (1721–1763). Working for members of the French royal family and aristocracy, these craftsmen excelled at producing veneered and marquetry pieces of furniture (tables, cabinets, and chests of drawers) fashionable for their lavish surfaces, refined gilt-bronze mounts, and elaborate design. These objects were renowned throughout Europe at a time when Paris was considered the capital of good taste. The entry on each work comprises both a curatorial section, with description and commentary, and a conservation report, with construction diagrams. An introduction by Anne-Lise Desmas traces the collection's acquisition history, and two technical essays by Arlen Heginbotham present methodologies and findings on the analysis of gilt-bronze mounts and lacquer. The free online edition of this open-access publication is available at www.getty.edu/publications/rococo/ and includes zoomable, high-resolution photography. Also available are free PDF, EPUB, and Kindle/MOBI downloads of the book, and JPG downloads of the main catalogue images.

Breaking Vegan Jordan Younger, 2015-11-01 Finding balance in life is a goal many of us strive to achieve. Whether it's through a healthy diet, exercise regimen, state of mind, relationship, or other activity (or all of the above), we spend our days trying to be, and become, our best selves. But what happens when all that focus starts to dominate our lives? When our desire for perfect health trumps everything else, perhaps without us even realizing it? What happens when our solution starts becoming the problem? These are questions that author and popular blogger Jordan Younger faced when she decided that her extreme, plant-based lifestyle just wasn't working in favor of her health anymore--and questions that you may be facing too. In *Breaking Vegan*, Jordan reveals how obsessive healthy dieting eventually led her to a diagnosis of orthorexia, or a focus on healthy food that involves other emotional factors and ultimately becomes dysfunctional, even dangerous. In candid detail, Jordan shares what it was like to leave

veganism, the downfall of her desire to achieve nutritional perfection, and how she ultimately found her way to recovery. In addition to this, Jordan outlines an anti-diet, whole-foods-based eating plan featuring more than 25 recipes to help inspire others to find similar balance in their own lives. *Breaking Vegan* is about tolerance and forgiveness. And ultimately, forging one's own path toward happiness.

Polymer Colloids Rodney Priestley,Robert

Prud'homme,2019-12-02 Academic and industrial research around polymer-based colloids is huge, driven both by the development of mature technologies, e.g. latexes for coatings, as well as the advancement of new materials and applications, such as building blocks for 2D/3D structures and medicine. Edited by two world-renowned leaders in polymer science and engineering, this is a fundamental text for the field. Based on a specialised course by the editors, this book provides the reader with an invaluable single source of reference. The first section describes formation, explaining basic properties of emulsions and dispersion polymerization, microfluidic approaches to produce polymer-based colloids and formation via directed self-assembly. The next section details characterisation methodologies from microscopy and small angle scattering, to surface science and simulations. The final chapters close with applications, including Pickering emulsions and molecular engineering for materials development. A comprehensive guide to polymer colloids, with contributions by leaders in their respective areas, this book is a must-have for researchers and practitioners working across polymers, soft matter and chemical and molecular engineering.
