Late Evolvers Arun B,2013-11-20 There are so many races and ethnic groups, so many variations and differences. Often we wonder why this has happened. Climatic conditions, environment and geographic distribution of UV radiation have long been blamed for differences in skin colour and racial natures of humans around the world. However, Evolution played a major role in making these differences among humans. There are some hidden truths in the evolution that could explain about how different racial natures came into humans, which had more effect than other reasons such as climate, environmental and geographic conditions. This book lays its effort to unravel these mysteries in the simplest way possible and forwards a rather new theory related to human evolution, which we could completely depend upon to know about variations in skin color, the differences in facial structure and the cognitive development of people around the world. The human evolution was a linear progression from tree climbers to big brained modern humans but recently scientists found out that our evolutionary past was a great deal more complex, In East Africa at least three or as many as six species of human-like apes were around during the period from 2.5 to 1.8 million years ago, more diversity than predicted earlier. Now our family tree may have to be completely redrawn.

Structural anthropological mythic analysis and ethnographic details demonstrate how the Slender Man mythology is structured, and how its everlasting nature in the online communities demonstrates an importance of the mythos.

Del Gusano Cósmico al Cerebro del Pulpo Juan Carlos Fontecilla Camps, 2020-08-01 Este libro describe una historia que comenzó hace unos 200 mil años, con la aparición de la especie humana probablemente en el cuerno de África. El mundo era un lugar lleno de incógnitas a las que, con el paso de los milenios, hemos procurado responder en el largo camino que lleva del mito a la ciencia. Nuestra curiosidad e inteligencia nos ha permitido descifrar, en gran medida, los misterios del universo, de la vida y de nosotros mismos. Hemos aprendido que, tras la aparente constancia y lógica del mundo en que vivimos, se esconden leyes físicas que rigen lo enormemente pequeño y lo inconmensurablemente grande. Sabemos también que la vida necesitó condiciones muy especiales para surgir y que su evolución no ha ocurrido de manera lineal ni estable; nuestra propia evolución es el fruto de múltiples cruzamientos entre diferentes grupos humanos hace cientos de miles de años. Solo somos la rama sobreviviente de un árbol muy frondoso. Los quince ensayos aquí contenidos abarcan temas que nos han fascinado desde hace mucho tiempo, como son el origen de la vida en la Tierra, la evolución biológica, la situación de nuestro planeta en el espacio, el microbiota, la inteligencia animal, la naturaleza de los virus, y también la teoría de la relatividad y los agujeros (hoyos) negros. Si bien son escritos con un estilo científico, estos ensayos están destinados a todo tipo de lector cuyo interés sea profundizar su comprensión de la realidad y de las curiosidades del mundo en que vivimos.
