Dog owners everywhere have found their outlet in Dog Shaming, where they can confess their dogs' biggest (and often grossest!) sins, which turn out to be recognizably universal—complete with snapshots of ridiculously cute but shamed pups who don't seem capable of humping humans, pooping on pillows, or snagging steak straight from a grill. So share in the shaming and laugh through your frustration as Dog Shaming reminds us that unconditional love goes both ways.

Ziemba has focused on documenting, explaining, and trading on, calendar-based and other anomalies. This collection contains not only the original papers, but updates that examine whether the patterns persist.” Jay R Ritter Professor of Finance University of Florida “A question I am frequently asked is whether stock market regularities persist into the future. My answer is always the same. If you think an anomaly looks interesting, don't invest a penny until you have read what William T Ziemba has to say about it. He is the master of research on anomaly strategies.” Elroy Dimson Professor Emeritus London Business School “Research on return anomalies touches upon central topics in financial economics: Are markets informationally efficient? Are smart arbitrageurs able to correct mispricing swiftly, or at all? Are patterns of predictability in securities markets the consequences of risk premia, psychological bias, or mere ex post data-mining? To address these questions it is valuable to have an extensive inventory of careful studies of different kinds of markets, assets, countries, frequencies, institutional settings, and time periods. As such, this volume is a valuable source of ideas and stylized facts for the building of new theoretical insight.” David Hirshleifer Professor of Finance UC Irvine “Can you beat the market by using historical patterns in financial data? Here is the latest and most comprehensive treatment of these anomalies by a leading theorist and practitioner—what paid, what is working, and what might be profitable in the future.” Edward O Thorp Edward O Thorp & Associates Author of “Beat the Dealer” and “Beat the Market” “This lively retrospective takes readers on an informative anomalies tour, featuring both breadth and depth, across Japan, Europe, and the US in markets for equities, fixed income securities, land, and horse race betting.” Hersh Shefrin Professor of Finance Santa Clara University

**Calendar of Regrets** Lance Olsen,2010-09-25 A wildly inventive and visually rich collage of twelve interconnected narratives, one for each month of the year, all pertaining to notions of travel--through time, space, narrative, and death The poisoning of the painter Hieronymus Bosch; anchorman Dan Rather's mysterious mugging on Park Avenue as he strolls home alone one October evening; a series of postcard meditations on the idea of travel from a young American journalist visiting Burma; a husband-and-wife team of fundamentalist Christian suicide bombers; the myth of Iphigenia from Agamemnon's daughter's point of view—these and other stories form a mosaic, connected through a pattern of musical motifs, transposed scenes, and recurring characters. It is a narrative about narrativity itself, the human obsession with telling ourselves and our worlds over and over again in an attempt to stabilize a truth that, as Nabokov once said, should only exist within quotation marks.

Concepts of Biology Samantha Fowler, Rebecca Roush, James Wise, 2018-01-07 Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.
