Beyond Significance Testing: Reforming Data Analysis Methods in Behavioral Research Rex B. Kline, 2004-01-01
Annotation The book is intended for applied researchers and students who may not have quantitative backgrounds. Readers will learn how to measure effect size on continuous or dichotomous outcomes in comparative studies with independent or dependent samples. They will also learn how to calculate and correctly interpret confidence intervals for effect sizes. Numerous research examples from a wide range of areas illustrate how to apply these principles and how to estimate substantive significance instead of just statistical significance. Additional alternatives to statistical tests are described, including meta-analysis, resampling techniques like bootstrapping, and Bayesian estimation.--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. Metal Fatigue: Effects of Small Defects and Nonmetallic Inclusions Yukitaka Murakami, 2002-04-29 Metal fatigue is an essential consideration for engineers and researchers who are looking at factors that cause metals to fail through stress, corrosion, etc. This is an English translation of a book originally published in Japan in 1993, with an additional two chapters on the fatigue failure of steels and the effect of surface roughness on fatigue strength. The methodology is based on important and reliable results and may be usefully applied to other fatigue problems not directly treated in this book.

A. K. A. Jesus Hope Dj Harle-Mould, 2022-02-11 We often hear that God works in mysterious ways, using these wonders to help his children when they need it most. However, we do not always recognize these interactions as Christ himself, but rather as just another person or random event. To help Christians better recognize Jesus in their daily lives, Hope Harle-Mould has combined sketches of Jesus with those of biblical witnesses to create an embodiment of Christ recognizable to each of us in a contemporary way. This is our religious task: to learn how to walk through our life and world—our senses spiritually attuned with Christlike focus and perspective, until something hidden emerges, something more, something holy—the radiance of God's face shining on you, giving you grace and peace. For individual or group study, AKA Jesus is a tool to help each of us learn to recognize God's presence in our lives each day through the actions of strangers. These engaging sketches will help readers open their spiritual eyes to the world around them and see the wonder of God's provision and involvement in each life.

Aircraft Aerodynamic Parameter Estimation from Flight Data Using Neural Partial Differentiation Majeed Mohamed, Vikalp Dongare, 2021-02-24 This book presents neural partial differentiation as an estimation algorithm for extracting aerodynamic derivatives from flight data. It discusses neural modeling of the aircraft system. The neural partial differentiation approach discussed in the book helps estimate parameters with their statistical information from the noisy data. Moreover, this method avoids the need for prior information about the aircraft model parameters. The objective of the book is to extend the use of the neural partial differentiation method to the multi-input multi-output aircraft system for the online estimation of aircraft parameters from an established neural model. This approach will be relevant for the design of an adaptive flight control system. The book also

discusses the estimation of aerodynamic derivatives of rigid and flexible aircraft which are treated separately. The longitudinal and lateral-directional derivatives of aircraft are estimated from flight data. Besides the aerodynamic derivatives, mode shape parameters of flexible aircraft are also identified in the book as part of identification for the state space aircraft model. Since the detailed description of the approach is illustrated through the block diagram and their results are presented in tabular form with figures of parameters converge to their estimates, the contents of this book are intended for readers who want to pursue a postgraduate and doctoral degree in science and engineering. This book is useful for practicing scientists, engineers, and teachers in the field of aerospace engineering.
