Theft Is Property! Robert Nichols,2019-12-20 Drawing on Indigenous peoples' struggles against settler colonialism, *Theft Is Property!* reconstructs the concept of dispossession as a means of explaining how shifting configurations of law, property, race, and rights have functioned as modes of governance, both historically and in the present. Through close analysis of arguments by Indigenous scholars and activists from the nineteenth century to the present, Robert Nichols argues that dispossession has come to name a unique recursive process whereby systematic theft is the mechanism by which property relations are generated. In so doing, Nichols also brings long-standing debates in anarchist, Black radical, feminist, Marxist, and postcolonial thought into direct conversation with the frequently overlooked intellectual contributions of Indigenous peoples.

The Theory of Criticism Murray Krieger,2019-12-01 Originally published in 1976. Representing years of critical reflection, *The Theory of Criticism* attempts to construct a poetics of presence. Within a wide range of critical terminology, Murray Krieger has sought to create a new vision. In language that is passionate and often dramatic,

he looks at the multidimensionality of the poetic world through the lens of Western poetics. His work clearly addresses itself to post-New Critical questions: how to preserve the literary object as a thing to be perceived, valued, and enjoyed and yet to account for its presence in, and interaction with, our culture as a whole, always in danger of being dissolved into man's language-making and -forming activity in general. Our awareness of the poem as object must be modified by our awareness that it is an intentional object. Krieger develops his balanced vision in three parts. Part 1 defines the problem and defends the very activity of theorizing both in its own terms and in terms of the critic's function throughout the history of Western criticism. By asking at the outset whether criticism is vain or valuable, Krieger already confronts the basic tension between system and world and the need to account for both. By creating a heuristic system that examines the possibility of form, the critic serves also the world of history and thought as a whole. Part 2 pursues that history from the classical encounter with mimesis in Greek thought to the Romantic and post-Romantic elevation of consciousness as a main criterion of poetic art. Defining a humanistic aesthetic as it has been viewed since Aristotle, the author shows how, during and after the eighteenth century, form was opened up under the impact of a Kantian and post-Kantian view, epitomized finally by Coleridge's imagination and its consequences for recent theorists. Part 3 deals with the image of the world struggling against its enclosure within a poetic context. It expands our view of metaphor as a reflection of the dual nature of poetic language, simultaneously locked into the poem and referring to history and nature outside. Our reading of the poem, Krieger concludes, must be double: we must see the poem as a linear and chronological sequence reflecting real life, and we must read it as a circular, imitative, mutually implicative mode.

Strange Concepts and the Stories They Make Possible Lisa Zunshine, 2008-07-28 In this fresh and often playful interdisciplinary study, Lisa Zunshine presents a fluid discussion of how key concepts from cognitive science complicate our cultural interpretations of "strange" literary phenomena. From Short Circuit to I, Robot, from The Parent Trap to Big Business, fantastic tales of rebellious robots, animated artifacts, and twins mistaken for each other are a permanent fixture in popular culture and have been since antiquity. Why do these strange concepts captivate the human imagination so thoroughly? Zunshine explores how cognitive science, specifically its ideas of essentialism and functionalism, combined with historical and cultural analysis, can help us understand why we find such literary phenomena so fascinating. Drawing from research by such cognitive evolutionary anthropologists and psychologists as Scott Atran, Paul Bloom, Pascal Boyer, and Susan A. Gelman, Zunshine examines the cognitive origins of the distinction between essence and function and how unexpected tensions between these two concepts are brought into play in fictional narratives. Discussing motifs of confused identity and of twins in drama, science fiction's use of robots, cyborgs, and androids, and nonsense poetry and surrealist art, she reveals the range and power of key concepts from science in literary interpretation and provides insight into how cognitive-evolutionary research on essentialism can be used to study fiction as well as everyday strange concepts.

Wonders of Spiritual Unfoldment John Butler, 2008-11-01 A personal account of searching for spiritual

understanding initially outside Christian teaching, this book takes the position that there are as many ways to God as there are paths up a mountain. Interpreting his own spiritual breakthroughs, the author describes them as windows of realization and likens them to the sensation of being made whole. The book describes his journey from Eastern mantra-style meditation to the Orthodox prayer of the heart and details how a love of nature and a desire to do good played an important part in his spiritual unfoldment.

Nineteen Eighty-Four George Orwell, 2021-01-09 *Nineteen Eighty-Four: A Novel*, often published as 1984, is a dystopian social science fiction novel by English novelist George Orwell. It was published on 8 June 1949 by Secker & Warburg as Orwell's ninth and final book completed in his lifetime. Thematically, *Nineteen Eighty-Four* centres on the consequences of totalitarianism, mass surveillance, and repressive regimentation of persons and behaviours within society. Orwell, himself a democratic socialist, modelled the authoritarian government in the novel after Stalinist Russia. More broadly, the novel examines the role of truth and facts within politics and the ways in which they are manipulated. The story takes place in an imagined future, the year 1984, when much of the world has fallen victim to perpetual war, omnipresent government surveillance, historical negationism, and propaganda. Great Britain, known as Airstrip One, has become a province of a totalitarian superstate named Oceania that is ruled by the Party who employ the Thought Police to persecute individuality and independent thinking. Big Brother, the leader of the Party, enjoys an intense cult of personality despite the fact that he may not even exist. The protagonist, Winston Smith, is a diligent and skillful rank-and-file worker and Outer Party member who secretly hates the Party and dreams of rebellion. He enters into a forbidden relationship with a colleague, Julia, and starts to remember what life was like before the Party came to power.

Celestial Delights Francis Reddy, 2011-11-12 Celestial Delights is essentially a 'TV Guide' for the sky. This will be its third edition. This title, which has aggregated sales of about 20,000 copies to date in its two previous editions and has found a niche with skygazers, is much awaited. Through extensive graphics integrated with an eight-year-long calendar of sky events, it provides a look at don't miss sky events, mostly for naked-eye and binocular observing. The book is organized by ease of observation - lunar phases and the brighter planets come first, while solar eclipses, the aurora, and comets come later. Celestial Delights also includes a hefty dose of sky lore, astronomical history, and clear overviews of current science. It provides a handy reference to upcoming naked-eye events, with information broken out in clear and simple diagrams and tables that are cross-referenced against a detailed almanac for each year covered. Most broad-ranging astronomy field guides focus on stars, constellations, and the deep sky, but tend to ignore planetary events, which are in by far the most widely observable aspects of the changing night sky. Celestial Delights puts a variety of information all in one place, presents it in a friendly way that does not require prior in-depth astronomical knowledge, but provides the context and historical background for understanding events that astronomical computer programs or web sites lack.

The Anthropology of Parliaments Emma Crewe, 2021 The Anthropology of Parliaments offers a fresh, comparative approach to analysing parliaments and democratic politics, drawing together rare ethnographic work by anthropologists and politics scholars from around the world. Crewe's insights deepen our understanding of the complexity of political institutions. She reveals how elected politicians navigate relationships by forging alliances and thwarting opponents; how parliamentary buildings are constructed as sites of work, debate and the nation in miniature; and how politicians and officials engage with hierarchies, continuity and change. This book also proposes how to study parliaments through an anthropological lens while in conversation with other disciplines. The dive into ethnographies from across Africa, the Americas, Asia, Europe, the Middle East and the Pacific Region demolishes hackneyed geo-political categories and culminates in a new comparative theory about the contradictions in everyday political work. This important book will be of interest to anyone studying parliaments but especially those in the disciplines of anthropology and sociology; politics, legal and development studies; and international relations.

Better by Design Ayub Khan, 2009 Libraries today are faced with rapidly shifting populations of users with differing needs, who require a range of new communications links that are transforming our concept of the library space. This developing role has created a set of new and complex challenges for those delivering library services. There is no such thing as the 'perfect' library building. However, a well designed building will enable a project both to gain local acceptance more easily and to ease the process of securing planning permission. It also needs

to be cost effective to run, support the organization's objectives well, offer an improved service to the user and make an impact on the community. This much-needed book takes as its starting point the fact that few architects know very much about libraries, and fewer librarians know about architectural planning and designing. It steers a clear path for library managers through the language and processes that they need to understand as members of a team overseeing the planning of a new library building project, major refurbishment or remodelling of an existing library. Key topics include: twenty-first century libraries developing a business case project management the design/project team selecting an architect partnership and community engagement the design brief design quality space planning and access occupancy and post-occupancy evaluation building libraries for the future. Appendices offer top tips and checklists, together with a glossary of common terms used within the construction environment to help further de-mystify the design process for librarians. Readership: This practical and accessible book is an invaluable guide not only for new entrants to the library profession, but also for experienced practitioners who are approaching for the first time the important task of creating a new library or major refurbishment of existing facilities. It will also be of great relevance to architects unfamiliar with library building requirements.
