M12 Gun Motor Carriage David Doyle, 2018-10-30 Although only 100 examples were produced, the 155mm Gun Motor Carriage M12 served with distinction as an infantry-support weapon and in particular as a bunker-buster during the U.S. assault on the Siegfried Line in the winter of 1944-45. The ability to rapidly ready heavy artillery for firing led to the development of the M12 155mm gun in 1941, based on the M3 Medium Tank chassis. The trial vehicle, built by Rock Island Arsenal, was designated T6. To accommodate the large, rear mounted weapon - a French-made M1917 155mm gun, the engine was relocated forward to a position just behind the driving compartment. A hydraulically operated spade mounted at the rear of the vehicle, which was lowered during firing to anchor the vehicle against the recoil. When retracted into the travelling position it provided a seat for two of the six crewmen. The production run was between September 1942 and March 1943, with a total of one hundred units being built. Though a few were used by training units, most were placed in storage until February 1944, when the first of 74 of them were shipped to Baldwin Locomotive Works to be improved based on further tests and usage in training. This work continued until May 1944. Three slightly different WWI surplus weapons were mounted depending upon availability, the M1917, the M1917A1 and the M1918M1. The M1917 was French built, the M1918 was US built, and the M1917A1 had the French gun tube, and the US breech. The M12 would earn the nickname Door Knocker for its pounding of the German Siegfried Line.

MG 34 and MG 42 Machine Guns Chris McNab, 2012-10-20 With the MG 34, the German Wehrmacht introduced an entirely new concept in automatic firepower - the general-purpose machine gun (GPMG). In itself the MG 34 was an excellent weapon: an air-cooled, recoil-operated machine gun that could deliver killing firepower at ranges of more than 1,000m. Yet simply by changing its mount and feed mechanism, the operator could radically transform its function. On its standard bipod it was a light machine gun, ideal for infantry assaults; on a tripod it could serve as a sustained-fire medium machine gun. During World War II, the MG 34 was superseded by a new GPMG - the MG 42. More efficient to manufacture and more robust, it had a blistering 1,200rpm rate of fire. Nicknamed 'Hitler's buzzsaw' by Allied troops, it was arguably the finest all-round GPMG ever produced, and alongside the MG 34 it inflicted heavy casualties. Featuring specially commissioned full-colour artwork and drawing upon numerous technical manuals and first-hand accounts, this study explores the technological development, varied roles and lasting influence of the revolutionary MG 34 and MG 42 machine guns and their postwar successors.

The M3 "Grease Gun" Leroy Thompson, 2016-05-19 Influenced by the German MP 40 and the British Sten, the .45-caliber M3 "Grease Gun" served as the primary US submachine gun for almost a half-century. Designed to replace the expensive Thompson SMG, the M3 was issued to airborne troops and others during World War II thanks to its compact design with sliding wire stock. An improved variant, the M3A1, was favored by armored crews right up to the beginning of the 1990s, seeing service in 1991's Operation Desert Storm. In Korea and Vietnam, reconnaissance troops and special-operations forces were at times armed with the M3A1 - also available in a suppressed version - and it was the first SMG issued to the US counterterrorist unit Delta Force. Featuring full-color artwork, first-hand accounts, and archive and close-up photographs, this is the engaging story of the M3 submachine gun.

The Vickers-Maxim Machine Gun Martin Pegler, 2013-05-20 The world's first self-powered machine gun, the Maxim gun became a potent symbol of Victorian colonialism in the closing years of the 19th century. It was the brainchild of Sir Hiram Maxim, the American-born firearms inventor who founded the company bearing his name with financing from Albert Vickers, who became the company's chairman; Maxim's company was absorbed by Vickers, Sons and Company in 1897. Subsequent variants in British, German and Russian service - the .303in Vickers (1912), 7.92mm MG 08 (1908) and 7.62mm PM M1910, respectively - dominated both the Eastern and Western Fronts during World War I and soldiered on into World War II, while the Vickers remained in front-line British service essentially unchanged until 1968. Featuring specially commissioned full-colour artwork and written by a noted authority, this is the engaging story of the Maxim and its descendants, the innovative rapid-fire weapons that saw combat with British, German, Russian and other forces in the late Victorian era and throughout the world wars.

German Machine Guns of World War I Stephen Bull, 2016-05-19 World War I's defining weapon for many, Germany's MG 08 machine gun won a formidable reputation on battlefields from Tannenberg to the Somme. Although it was a lethally effective weapon when used from static positions, the MG 08 was far too heavy to perform a mobile role on the battlefield. As the British and French began to deploy lighter machine guns alongside their heavier weapons, the Germans fielded the Danish Madsen and British Lewis as stopgaps, but chose to adapt the MG 08 into a compromise weapon - the MG 08/15 - which would play a central role in the revolutionary developments in infantry tactics that characterized the last months of the conflict. In the 1940s, the two weapons were still in service with German forces fighting in a new world war. Drawing upon eyewitness battlefield reports, this absorbing study assesses the technical performance and combat record of these redoubtable and influential German machine guns, and their strengths and limitations in a variety of battlefield roles.

Universal Carrier 1936-48 David Fletcher, 2012-05-20 The Universal Carrier was a fast, lightly armed vehicle developed by the British Army to carry infantry across ground defended by small-arms fire, specifically the Bren light machine gun, hence the name 'Bren Gun Carrier'. This name would stick with the Universal Carrier and all of its future variants. This book details the Carrier, which was employed in a number of roles including carrying ammunition and towing anti-aircraft guns and trailers. All Allies used the Universal Carrier extensively during practically every World War II campaign. By the war's end, the Universal Carrier had proved itself to be an invaluable and successful cross-country vehicle that was both agile and fast for its time.

The Lewis Gun Neil Grant, 2014-03-20 During World War I, the British adopted the US-designed Lewis gun as an infantry weapon, realizing that its light weight and the fact that it could be fired both prone and on the move made it ideal for supporting advances and defending captured trenches. Later adopted by an array of countries from the Netherlands to Japan, the Lewis successfully served as the primary or secondary armament in armoured fighting vehicles and in both ground-based anti-aircraft and aircraft-mounted roles. Although it was superseded by the Bren in British service in 1937, the outbreak of World War II meant that thousands returned to active service, and it played a key role as far afield as Libya, with the Long-Range Desert Group, and the Philippines, with the US Marine Corps. Written by an authority on this iconic light machine gun, this is the fascinating story of the innovative and influential Lewis gun, from the trenches of World War I to the Libyan desert and Pacific islands of World War II and beyond.

M10 Tank Destroyer vs StuG III Assault Gun Steven J. Zaloga, 2013-08-20 The Allies' M10 Tank Destroyer and the Germans' Sturmgeschütz (StuG) III were the unsung workhorses of the northwest European battlefields of 1944-45. While their mission was not principally fighting one another, their widespread use ensured their frequent encounters, from the Normandy Bocage, to the rubble-strewn streets of Aachen. The StuG III was the quintessential assault gun, a low-slung, heavily armoured, turret-less vehicle intended to provide direct fire support for infantry formations, whilst the M10 3in Gun Motor Carriage was originally developed as a tank destroyer. However, by 1944 the 3in gun proved ineffectual against the most thickly armored German tanks, and was consequently relegated to infantry support too. Widely deployed in roles their designers had not envisaged, these two armoured fighting vehicles clashed repeatedly during the 11-month campaign, which saw the Allies advance from Normandy to the heart of the Reich. Fully illustrated with specially commissioned artwork, this is the story of their confrontation at the height of World War II.

Autocannon Anthony G Williams, 2022-08-02 Autocannon is a comprehensive history of the development of automatic cannon and their ammunition from the end of the nineteenth century up to the present day. A brief history of their development is followed by sections examining the

basic principles of gun and ammunition design, including various unconventional systems. Next comes a survey of cartridges in calibre order, from 20mm to 57mm, including not only ammunition that has seen service, but also a wide range of experimental types. Finally there is a survey of the cannon, grouped by nationality, which again includes many experimental models. The book includes data on about 200 different cartridges and 400 cannon, and has nearly 500 illustrations. It is the culmination of decades of research, and is unmatched in its coverage of this subject.

Pak 40, German 7,5 Cm Anti-tank Gun Jan Coen Wijnstok,2013-05-19 Technical/historical background illustrated with b/w period photos and a selection of detailed walk around photographs highlighting technical details of the Pak 40 - the most numerous and widely used anti-tank gun in the Wehrmacht inventory during World War II. Includes 182 full color photos of the two museum pieces preserved at the Panzermuseum Munster, Germany and the Dutch Army Museum, Maaldrift, the Netherlands, and the two city monuments at Valkenburg and Zandoerle in the Netherlands; 31 b/w period photos showing several camouflage and crew uniforms options; 10 pp. super-detailed 1/24th, 1/35th & 1/48th scale drawings of PaK 40 & variants, 2 pp 1/7.5th scale drawings of the ammunition, 3 pp scale drawings of the PaK 40 self-propelled mountings.

German Self-Propelled Artillery Guns of the Second World War Craig Moore,2019-03-19 • One of the few books that explores the design and deployment of German artillery self-propelled guns (SPGs) to support tanks and infantry during the Second World War • A great reference book for military modellers, historians and tank wargamers interested in German SPGs • A comprehensive guide to German SPGs between 1939 and 1945 in one volume for the very first time, including previously unpublished information on the little-known Hummel-Wespe proving that at least twelve units were built • Authentic camouflage suggestions for military modellers A single towed artillery gun required a team of six horses and nine men. During the Second World War, German engineers mounted an artillery gun on top of a tank chassis; this new technology reduced the amount of valuable war resources as self-propelled guns only required a four- or five-man crew. They could also be made ready to fire more rapidly. German Self-Propelled Artillery Guns of the Second World War covers the development and use of this new weapon between 1939 and 1945. One type was successfully deployed in the invasion of France in 1940 and more were used on the Eastern Front against Soviet forces from 1941 until the end of the war. The ‘Desert Fox’ (Ewin Rommel) demanded artillery guns that could keep up with his panzers in North Africa. He was sent 15-cm howitzers mounted on top of Panzer II tank chassis’ and captured French Army Lorraine 37L-tracked armoured supply vehicles. Rommel’s forces in northern France were equipped with a variety of new self-propelled guns, which were used against the Allies on the beaches of Normandy during D-Day in 1944. • Includes 81 colour photographs

The Book of the Machine Gun Frederick Victor Longstaff,Andrew Hilliard Atteridge,2003

Soviet Submachine Guns of World War II Chris McNab,2014-05-20 The submachine gun (SMG) came to be the embodiment of the Soviet fighting spirit during World War II. From 1943 the Red Army's preference for close-quarters combat resulted in entire infantry units being equipped with nothing but SMGs. By deploying multiple SMG-armed companies and battalions, the Red Army was able to develop ferocious firepower in urban warfare and position assaults, the soldiers keeping within the SMG's effective range of about 150m to nullify the German skills in armoured and manoeuvre warfare, artillery support and aerial bombardment. Featuring expert analysis and an array of specially commissioned full-colour artwork, this engaging study explains the history, use and development of Soviet wartime SMGs in detail. It gives particular focus to the tactical applications of these weapons in combat, and how they compared to firearms wielded by their German opponents. With numerous first-hand combat accounts, and detailed technical explanations, this book is ideal for both the general reader and the firearms enthusiast.

TM 9-751 155-MM Gun Motor Carriage M12 and Cargo Carrier M30 Technical Manual War Department,2013-05-01 The 155-mm Gun Motor Carriage M12 was a U.S. self-propelled gun developed during the Second World War. Only 100 were built; sixty in 1942 and another forty in 1943. The M12 was built on the chassis of the M3 Lee tank. It had an armored driver's compartment, but the gun crew were located in an open topped area at the back of the vehicle. An earth spade at the rear was employed to absorb recoil. During 1943 the vehicles were used for training or put into storage. Before the invasion of France, seventy four M12s were upgraded in preparation for combat operations. They were employed successfully throughout the campaign in North-West Europe. Although designed primarily for indirect fire, during assaults on heavy fortifications the M12s were sometimes employed in a direct-fire role. Limited storage space meant that only ten projectiles and propellant charges could be carried on the vehicle. Given this, a similar vehicle without the gun was produced as the Cargo Carrier M30. This was designed to transport the gun crew and additional ammunition. In operational conditions the M12 and M30 would serve in pairs. The M30, which could carry forty rounds of 155-mm ammunition, was armed with a .50-caliber Browning M2 machine gun. Created in 1944, this technical manual reveals a great deal about the M12's and M30's design and capabilities. Intended as a manual for those charged with operation and maintenance, it details many aspects of the M12's engine, cooling, power, suspension and other systems. Originally labeled restricted, this manual was declassified long ago and is here reprinted in book form. Please note, this text was not produced in large numbers and this replica may have some pages that are substandard in quality. Care has been taken however to preserve the integrity of the text.
