A Photo History of Tanks in Two World Wars George Forty, 1984 Captioned photographs and text trace the use of the tanks and related vehicles in the world from 1915 to the present.

The AMX 13 Light Tank M.P. Robinson, Peter Lau, Guy Gibeau, 2017-09-30 The AMX 13 was originally designed in the immediate aftermath of the Second World War. It represents French ambitions for national resurgence and withdrawal from wartime dependence on American military technology. Being a light tank it was an ambitious and far sighted departure from conventional tank design and it found a ready export market as well as being a critical part in the French Army arsenal. Its basic hull design lent itself to the development of a vast list of variants. French designers progressively modernized, and indeed reinvented, the AMX13 and enabled it to claim to be one of the most successful armored vehicle programs of the postwar period. It proved its worth in numerous small wars worldwide in the service of many countries. This, the first commercially published work on the AMX13 in English, examines in detail the technical industrial and tactical story of this remarkably successful armored fighting vehicle. The authoritative text is backed by an impressive selection of images

M3 & M5 Stuart Light Tank 1940-45 Steven J. Zaloga, 2022-04-28 The M3 and M5 family of light tanks were the culmination of American tank development of the 1930s. By the time of the outbreak of the World War II, they were approaching obsolescence, as tank forces in Europe were shifting from light to medium tanks as the main element of their armored forces. First entering combat in the autumn of 1941 in the Western Desert with the British Army, the Stuart quickly proved its inadequacies. The M3 and M5 light tanks proved more suitable in the Pacific theater than in Europe, and fought successfully in many of the major battles including Guadalcanal, Tarawa and Peleliu. This title narrates this distinctive and unusual fighting vehicle's

history.

Armored Strike Force Charles C. Roberts Jr.,2016-07-01

The U.S. 70th Tank Battalion boasts one of the most impressive combat records of any American armored unit in World War II. It landed in North Africa as part of Operation Torch and participated in the invasion of Sicily, D-Day, the Normandy campaign, the Battle of the Bulge, and the final drive into Germany. It remains in service today as the 70th Armor Regiment, the U.S. Army's most decorated armor unit.

M24 Chaffee Light Tank 1943-85 Steven J.

Zaloga,2022-02-17 The history of US light tanks during World War II is a chequered one. The Light Battalions of US Armored Divisions were initially filled with M3A1 and M5 Stuart tanks, however, on the battlefields of North Africa it was realised that these were disastrously under armoured and gunned, and a replacement, or the abandonment of light tank doctrine, was desperately needed. It wasn't until the last few months of WWII that the M24 Chaffee came into service and it was extensively used in combat from the Battle of the Bulge to the final campaigns in Germany. This book will trace the history of this design, its combat record in World War II, its many variants, and its extensive combat record post 1945.

US Cold War Tanks and Armoured Fighting Vehicles

Michael Green,2019-08-30 This expert study of the U.S. military's armored vehicles deployed during the Cold War features rare photographs from the wartime archives. To counter the Soviet threat and that of their client States during the Cold War years 1949-1991, the American military deployed an impressive range of main battle tanks and armored fighting vehicles. Expert author Michael Green presents a detailed study of these vehicles and their variants in this informative volume of stunning wartime photographs. The Patton series of medium main battle tanks—including the M46, M47 and M48—supplemented by the M103s Heavy Tank initially formed the core of the US tank fleet.

In 1960 the M60 MBT entered service and, in turn, was replaced by the M1 Abrams in 1980. In support were armored reconnaissance vehicles, progressively the M41 bull dog (1951); the M114 (1961), the M551 Sheridan (1967) and M3 Bradley Cavalry Fighting Vehicle (1981). The armored personnel carrier range included the ubiquitous M113 and its replacement the M2 Bradley, cousin of the M3. All of these vehicles are covered in this highly detailed volume in the Images of War series.

Early US Armor Steven J. Zaloga, 2017-04-07 Between the two World Wars, the US contributed significantly to the development of the tank, a weapon invented by the British and the French seeking a way to break through the lines of German trenches. From the employment of the French Renault FT and British Mark V during their involvement in World War I, the US branched out with their own indigenous designs including the M1 Cavalry Car and the M2 Light and Medium tanks, the precursors to the Stuart and Grant tanks of World War II. Tank designers in this period faced unique challenges and so the story of early American armour is littered with failures amongst the successes. Featuring previously unpublished photos and fully illustrated throughout, *Early American Armor (1): Tanks 1916-40* is essential reading for anyone interested in American armour, or in the development of tank design.

M5 and M5A1 Stuart Light Tank David Doyle, 2006-07 Named after the Civil War general Jeb Stuart, the Stuart was used by the British Army in North Africa during World War II. Although the tank lacked firepower and had bad internal layout, it was quick and mechanically reliable, earning it the nickname 'Honey'. This title offers wartime photos of the M5A1 US Light Tank, better known as the Stuart.

T-26 Light Tank Steven J. Zaloga, 2015-01-20 The T-26 was the first major Soviet armour program of the 1930s, beginning as a license-built version of the British Vickers 6-ton export tank. Although the T-26 retained the basic Vickers hull and suspension,

the Red Army began to make extensive changes to the turret and armament, starting with the addition of a 45mm tank gun in 1933. The T-26 was built in larger numbers than any other tank prior to World War II. Indeed, more T-26 tanks were manufactured than the combined tank production of Germany, France, Britain, and the United States in 1931–40. This book surveys the development of the T-26 as well as its combat record in the Spanish Civil War, the war in China, the border wars with Poland and Finland in 1939–40, and the disastrous battles of 1941 during Operation Barbarossa.

M24 Chaffee, Vol. 1 David Doyle, 2019-11-28 The M24 Chaffee was the finest light tank developed by the US during WWII. This tank was developed by Cadillac, which, along with farm equipment manufacturer Massey-Harris, produced the vehicles. These tanks were used by the US during WWII and Korea and, during the post-WWII era, were supplied to numerous allied nations. This book chronicles the development and use of the vehicle from concept to combat. Through dozens of archival photos, many never before published, as well as detailed photographs of some of the finest existent examples of these vehicles, this iconic tank hunter is explored and its history is explained.

M5 Stuart Light Tank Crew Manual War Department, 2011-08-01 The Light Tank M3 and M5, known as the General Stuart, was the first tank used by American forces in armored combat during WWII. Like its predecessor the M2A4, the Stuart was armed with a 37mm M5 main gun. It also carried up to five Browning machine guns and 7500 rounds of ammunition. The M3 version sported radial aero-engines, replaced in the M5 with smoother, cooler twin Cadillac automobile engines. The M5 also featured improved sloped armor and had the driver's hatches moved up top. In the European Theater, where enemy armored vehicles were plentiful, the Stuart's weak main gun meant that it served primarily in cavalry and infantry support roles. In the

Pacific, where enemy armor was less of a threat and close support was a necessity, the Stuart's maneuverability proved a valuable asset. Over 25,000 Stuarts and variants were produced during the war, and they eventually served in the armies of over thirty countries including the Soviet Union, India and Republic of China Army. A few continue in active service military today. Intended as a general purpose manual for the platoon leader, tank commander and crew, this 1944 War Department FM 17-68 field manual shows how to achieve efficient execution of mounted and dismounted action, and precision and speed in service of the weapon. Originally restricted, this manual was declassified long ago and is here reprinted in book form. Care has been taken to preserve the integrity of the text.

Light Tanks Mikhail Baryatinskiy, 2006 It is one of the ironies of Soviet tank development that a country opposed to free enterprise and capitalism was largely reliant on influences from Britain and the USA for many of its early designs. However, unhindered by many of the tactical constraints that affected tank development in the West, the Red Army was able to acquire and develop technology that was under-rated in both Britain and the USA. From Britain, the famous manufacturer Vickers produced a Six-Ton light tank; effectively rejected by the War Office, one example was acquired by the Russians and this formed the basis of the Russian T-26 of 1931. Further British designs also influenced the later light tanks, equipment which was pivotal to the Red Army during its campaigns in Manchuria, Finland and against the initial German assault in 1941. In the USA, Walter Christie was also largely ignored as a designer but, as with Vickers, his designs came to be highly important. His influence was seen in the 'BT' - short for 'Bystrochodri' or 'Fast Tank' - series of light-medium tanks that was first introduced in 1932. The BT series saw service in Spain, Manchuria, Finland and in the defense of Russia itself in 1941. The critical aspect of the Christie design was that the vehicles were capable of operating both with

nor without tracks; in the latter case eight road wheels carried the weight of the vehicle, with steering being achieved via a steering wheel acting in conjunction with the clutch/brake system. In the second of the new 'Soviet Tanks' series, Mikhail Baryatinsky provides the reader with a comprehensive account of the development and operational record of Soviet light tanks. Utilizing photographs, line drawings and specially prepared artworks, he provides a detailed portrait of these highly successful tanks. Aimed at the modeler, military historian and war gamer, the new 'Soviet Tanks' series is designed to provide, probably for the first time in the English language, authoritative information on the classic Soviet tank designs of the 20th century. The series will be required reading for all those interested in the development of armored warfare over the past 100 years.

A History of the American Light Tank: Stuart R. P. Hunnicutt, 1992

Armored Victory 1945 Steven Zaloga, 2022-09-01 The second in Steven Zaloga's classic two-volume photo history of American armor in Europe is now available in paperback. Covering the Battle of the Bulge, the Rhine crossings, and the

final battles inside Germany, the book is beautifully illustrated with more than 1200 photos of American tanks and armored vehicles as well as many German tanks.

M24 Chaffee Light Tank Technical Manual: TM 9-729

Department of the Army, 2013-08 The Light Tank M24 was an American tank used during the later part of World War II and in postwar conflicts including the Korean War and, with the French, in the War in Algeria and the First Indochina War. In British service it was given the service name Chaffee, after the United States Army General Adna R. Chaffee, Jr., who helped develop the use of tanks in the United States armed forces. In April 1943, the Ordnance Corps, together with Cadillac division of General Motors, started work on the new project, designated Light Tank T24. Every effort was made to keep the weight of the vehicle under twenty tons. The armor was kept light, with the glacis plate only twenty five mm thick (but sloped at sixty degrees from the vertical). A new lightweight 75 mm gun was developed, a derivative of the gun used in the B-25H Mitchell bomber. The gun had the same ballistics as the M3, but used a thinly walled barrel and different recoil mechanism. The design also featured wider (sixteen inch) tracks and torsion bar suspension. It had a relatively low silhouette and a three-man turret. On October 15, 1943 the first pilot vehicle was delivered and production began in 1944 under the designation Light Tank M24. By the time production was stopped in August 1945, 4,731 M24s had left the assembly lines. Created in 1951, this technical manual reveals a great deal about the Chaffee's design and capabilities. Intended as a manual for those charged with operation and maintenance, it details many aspects of its engine, cooling, power and other systems. Originally labeled restricted, this manual was declassified long ago and is here reprinted in book form. Care has been taken to preserve the integrity of the text.

Hitler's Light Tanks Paul Thomas, 2019-10 Hitler's Wehrmacht led the way in armored warfare as the successful

blitzkriegs in Poland and North West Europe in 1940 so convincingly proved. The contribution of light tanks such as Panzers I, II and 35(t) was critical. As the war spread to the Balkans, north Africa and the invasion of Russia, German engineers worked tirelessly modifying existing light tanks and developing new models. The growing Soviet armored threat, in particular, spawned tank destroyers such as the Marder III Panzerjäger, SdKfz 138/1 and 139. Antiaircraft variants included the Flakpanzer 38(t) and the SdKfz 140/1 was a reconnaissance tank armed with a 20mm turret-mounted gun, developed from the SdKfz 22 armored car, whereas the Aufklarungspanzer 38(t) carried a 7.5cm gun in the support reconnaissance role. In the final stages of the war light tanks were phased out and the Marder and 38(t) were up-gunned; the Wespe was adapted from the Panzer II chassis. This superbly illustrated book gives a comprehensive overview of the multitude of vehicles and variants that came into service. With the text and captions providing technical data, the images show this formidable array of fighting vehicles in action across the theaters of war.

Russian Armour in the Second World War Michael

Green, 2013-09-19 This WWII pictorial history of Russia's tanks and armored fighting vehicles provides a vivid look at the Eastern Front through rare wartime photographs. When Hitler's armies advanced into Russia, it was Stalin's tanks and armored fighting vehicles that finally pushed them back from the outskirts of Moscow. At the Battle of Kursk in the summer of 1943, the Soviet tanks and AFVs proved their effectiveness by defeating the cream of the Panzertruppen. From that point on, the tanks and armored fighting vehicles of the Red Army continued their offensive operations until they victoriously entered Berlin in April and May of 1945. In this fascinating pictorial history, military expert Michael Green provides historical images of the full range of Russian armor as well as exterior and interior color photos of preserved and restored tanks and AFVs from the period. This

latest book in the Images of War series brings to life the Red Army's efforts to repel Hitler's Panzer Armies.

United States Tanks and Tank Destroyers of the Second World War Michael Green, 2021-12-30 This comprehensive and superbly illustrated book describes in authoritative detail the characteristics and contribution to victory of these formidable American fighting vehicles. Only after the Nazis invaded Poland and France did the United States Government authorize mass production of tanks. By the end of the War American industry had built nearly 90,000 tanks, more than Germany and Great Britain combined. The first big order in May 1940 was for 365 M2A4 light tanks, the initial iteration of the Stuart series, with almost 24,000 constructed. The Stuart series was supplemented by almost 5,000 units of the M24 Chaffee light tank. There was also the failed M22 Locust light tank intended for airborne operations. The M4 series of medium tanks, best known as the Sherman, were the most numerous with some 50,000 in service with not only the American military but British and other Allied armies. It was not until later in the war that the M26 Pershing heavy tank was built. Initially the US Army doctrine saw tanks as primarily for the exploitation role. Later the concept of tank destroyers evolved to counter large scale German armored offensives. These defensive AFVs included the half-track-based 75mm Gun Motor Carriage M3 and the full-tracked M10, M18, and M36. This comprehensive and superbly illustrated book describes in authoritative detail the characteristics and contribution to victory

of these formidable fighting vehicles.
