Pyro Earl W. Emerson, 2005 In his pulse-pounding thrillers, Earl Emerson takes readers into the heart of the world's most dangerous profession, where the next alarm might bring sudden death.

Pyro Monique Polak, 2012-09 Reading Level: 2.7 Franklin has to learn to cope with life's challenges without setting illegal fires.

Pyro-Vortex Scott Murray, Charity Bishop, 2013-01-18 It was a hot-weather whirlwind coursing across the upper plains. But unlike all the others, this one shifted course and veered into the shepherds' camp. The first hut it hit it destroyed, sucking-up the grass thatch roof and the cooking fire. The dried grass and other debris immediately burst into flames. It was an unfathomable occurrence. According to science, the Earth had not seen the likes of it for over 65 million years, not since the extinction of the last intelligent life on the planet. More recently, Satan wasn't able to get man to destroy himself through nuclear proliferation. Fear, Satan's only weapon against man, could have made him "push the button" during the Cold War. But he didn't. So to destroy mankind and interrupt God's plan, Satan made one last-ditch effort before the Rapture. It is fitting that in the American West they call hot-weather whirlwinds "Dust Devils." This is the story of what could happen if a Pyro-Vortex was to occur... Again.

Pyro Canyon Appleton Robert (author), 1901

Pyro Monique Polak, 2012-09 Ever since he was small, Franklin has been soothed by fire. Staring into the flames helps Franklin forget his problems. And right now, he's got a lot to forget. Franklin's mother has left the family home to be with her hairdresser boyfriend. Franklin's father, the mayor of Montreal West, is too busy worrying about his public image to do anything about the family. As a rash of local fires competes with upcoming elections for media attention, Franklin's father has to work hard to keep the public happy. And Franklin has to reconsider his romance with fire.

Geographies of Food and Power Amy Trauger, 2022-08-17 This book provides a comprehensive overview of the production and consumption of food, suitable for use in undergraduate classrooms, either at the intermediate or advanced level. It takes an intersectional approach to difference and power and approaches standard subjects in the geography of food with a fresh perspective focusing on inequality, uneven production and legacies of colonialism. The book also focuses on places and regions often overlooked in conventional narratives, such as the Americas in the domestication of plants. The topics covered in the textbook include: descriptions and analyses of food systems histories of agricultural development with a focus on the roles of different regions major commodities such as meat, grains and produce with a focus on the place of production contemporary challenges in the food system, including labor, disasters/conflict and climate change recent and emerging trends in food and agriculture such as lab-grown meat and vertical urban farms *Geographies of Food and Power* takes a synthetic approach by discussing food as something produced within an interconnected system, in which labor, food quality and the environment are considered together. It will be a valuable resource for students of human geography, environmental geography, economic geography, food studies and development.

The Pyrocene Stephen J. Pyne, 2022-08-02 A provocative rethinking of how humans and fire have evolved together over time—and our responsibility to reorient this relationship before it's too late. The Pyrocene tells the story of what happened when a fire-wielding species, humanity, met an especially fire-receptive time in Earth's history. Since terrestrial life first appeared, flames have flourished. Over the past two million years, however, one genus gained the ability to manipulate fire, swiftly remaking both itself and eventually the world. We developed small guts and big heads by cooking food; we climbed the food chain by cooking landscapes; and now we have become a geologic force by cooking

the planet. Some fire uses have been direct: fire applied to convert living landscapes into hunting grounds, forage fields, farms, and pastures. Others have been indirect, through pyrotechnologies that expanded humanity's reach beyond flame's grasp. Still, preindustrial and Indigenous societies largely operated within broad ecological constraints that determined how, and when, living landscapes could be burned. These ancient relationships between humans and fire broke down when people began to burn fossil biomass—lithic landscapes—and humanity's firepower became unbounded. Fire-catalyzed climate change globalized the impacts into a new geologic epoch. The Pleistocene yielded to the Pyrocene. Around fires, across millennia, we have told stories that explained the world and negotiated our place within it. The Pyrocene continues that tradition, describing how we have remade the Earth and how we might recover our responsibilities as keepers of the planetary flame.

Statistical Rethinking Richard McElreath, 2018-01-03 Statistical Rethinking: A Bayesian Course with Examples in R and Stan builds readers' knowledge of and confidence in statistical modeling. Reflecting the need for even minor programming in today's model-based statistics, the book pushes readers to perform step-by-step calculations that are usually automated. This unique computational approach ensures that readers understand enough of the details to make reasonable choices and interpretations in their own modeling work. The text presents generalized linear multilevel models from a Bayesian perspective, relying on a simple logical interpretation of Bayesian probability and maximum entropy. It covers from the basics of regression to multilevel models. The author also discusses measurement error, missing data, and Gaussian process models for spatial and network autocorrelation. By using complete R code examples throughout, this book provides a practical foundation for performing statistical inference. Designed for both PhD students and seasoned professionals in the natural and social sciences, it prepares them for more advanced or specialized statistical modeling. Web Resource The book is accompanied by an R package (rethinking) that is available on the author's website and GitHub. The two core functions (map and map2stan) of this package allow a variety of statistical models to be constructed from standard model formulas.

Her back ached, and her equipment felt heavier by the minute. The man she worked with looked up, then down the slope. The wind was picking up, and the Enemy fire grew closer with every passing minute. Then, a huge gust of wind almost knocked her over. Let's get out of here! her partner yelled, Firestorm! In a race against time, as casualties mount, Lacey teams up with arson investigators, homicide detectives, an FBI psychic agent, and even a Mob boss, all desperately trying to find the culprit. Can they find him before it's too late?
