**Mobile Suit Gundam: THE ORIGIN 7** Yoshiyuki Tomino,2014-09-30 The biggest name in Japanese science fiction—Gundam—returns with one of its creators retelling its origins 25 years after the series debuted. Caught in the crossfire of a space civil war, teenager Amuro Ray accidentally finds a new mobile weapon—the RX-78 Gundam. In the seventh volume of Gundam: THE ORIGIN, the Zeon have begun to show their might against the Earth Federation. For the longest time there has been a belief that the Zeon have evolved into a new form of man. These Spacenoids have not been forced to the stars; they were destined to them. And while there are still Earth colonies across the solar system, the Zeon were chosen to unify them all. Ultimately, the politics of space and the oppression shown by The Confederation has driven the Zeon to make some brutal choices . . . some of them akin to genocide!

**Classic Game Covers** Mike Winterbauer,2014-09-06 This book is a must read for computer gamers and artists who enjoy classic cover art of some of their favorite games. The book is visually beautiful and showcases all the classic covers I painted between 1985 and 1994. It also describes what it was like getting the commissions and painting them. This is a fun read for any one interested in being an artist and wondering what it is like to create classic cover art for games and movies. Told candidly and with a sense of humor you can learn the nostalgic history behind these paintings and many of my other paintings not lost to the digital age.

**Science and Decisions** National Research Council,Division on Earth and Life Studies,Board on Environmental Studies and Toxicology,Committee on Improving Risk Analysis Approaches Used by the U.S. EPA,2009-03-24 Risk assessment has become a dominant public policy tool for making choices, based on limited resources, to protect public health and the environment. It has been instrumental to the mission of the U.S. Environmental Protection Agency (EPA) as well as other federal agencies in evaluating public health concerns, informing regulatory and technological decisions, prioritizing research needs and funding, and in developing approaches for cost-benefit analysis. However, risk assessment is at a crossroads. Despite advances in the field, risk assessment faces a number of significant challenges including lengthy delays in making complex decisions; lack of data leading to significant uncertainty in risk assessments; and many chemicals in the marketplace that have not been evaluated and emerging agents requiring assessment. Science and Decisions makes practical scientific and technical recommendations to address these challenges. This book is a complement to the widely used 1983 National Academies book, Risk Assessment in the Federal Government (also known as the Red Book). The earlier book established a framework for the concepts and conduct of risk assessment that has been adopted by numerous expert committees, regulatory agencies, and public health institutions. The new book

embeds these concepts within a broader framework for risk-based decision-making. Together, these are essential references for those working in the regulatory and public health fields.

Drawing Futures Bob Sheil, Frédéric Migayrou, Luke Pearson, Laura

Allen, 2016-11-11 *Drawing Futures* brings together international designers and artists for speculations in contemporary drawing for art and architecture. Despite numerous developments in technological manufacture and computational design that provide new grounds for designers, the act of drawing still plays a central role as a vehicle for speculation. There is a rich and long history of drawing tied to innovations in technology as well as to revolutions in our philosophical understanding of the world. In reflection of a society now underpinned by computational networks and interfaces allowing hitherto unprecedented views of the world, the changing status of the drawing and its representation as a political act demands a platform for reflection and innovation. *Drawing Futures* will present a compendium of projects, writings and interviews that critically reassess the act of drawing and where its future may lie. *Drawing Futures* focuses on the discussion of how the field of drawing may expand synchronously alongside technological and computational developments. The book coincides with an international conference of the same name, taking place at The Bartlett School of Architecture, UCL, in November 2016. Bringing together practitioners from many creative fields, the book discusses how drawing is changing in relation to new technologies for the production and dissemination of ideas.
