The World's Fastest Helicopters Glen Bledsoe, Karen Bledsoe, Karen E. Bledsoe, 2002 Discusses the history and development of some of the world's fastest helicopters, describing the specific features and specifications of such aircraft as the SA 360 Dauphin, Boeing-Sikorsky RAH-66 Comanche, AH-64 Apache, and V-22 Osprey.

**A Case History of the United States Army RAH-66 Comanche Helicopter** Jason L. Galindo, 2000-03-01 The RAH-66 Comanche Helicopter was initiated as the Light Helicopter Family (LHX) in 1982 when an Army Aviation Mission Area Analysis (AAMAA) identified the need for an armed reconnaissance aircraft. Eighteen years later, the program has yet to reach a Defense Acquisition Board Milestone II review. This thesis described the history of the RAH-66 Comanche Helicopter acquisition program during these years. The research focused on the question of what significant events and issues have occurred over the course of the Comanche's development that have allowed it to remain a viable program. The research draws several conclusions from the analysis of the Comanche's history. Mainly, despite the significant duration of the program, a valid need for an armed reconnaissance platform still exists. Secondly, the innovative program management of Comanche has maintained a positive reputation for the program. Finally, the loss of Comanche at this point in time would severely impact the defense helicopter industrial base.

Modern Fighting Helicopters Bill Gunston, Mike Spick, 1998 This illustrated analysis of one of the premier combat weapons on the modern battlefield looks at the designs, weapons and tactics of 40 of today's military helicopters, including the Kamov Ka-50 and Ka-52 and the Boeing Sikorsky RAH-66 Comanche'

**The RAH-66 Comanche Helicopter** Arthur W. Linden, 2021 On December 5, 2003, Lt. Gen

Richard A. Cody, Army Deputy Chief of Staff and an experienced aviator, flew the Comanche. According to the January 2004 issue of National Defense he ...gave the aircraft a stellar review. ...Cody said that the Comanche had 'exceeded his expectations' and was particularly impressed by the rotor system, engine response and control. Cody also reportedly said the aircraft was 'easy to fly' and should be put into the hands of soldiers as soon as possible. Twelve weeks later the program was cancelled. So, what happened? How did Comanche become expendable? How did a program that was originally scheduled to enter Low Rate Initial Production in 1996 get delayed to 2011? How did an aircraft originally designed to replace the Army's light scout/attack fleet grow to become a virtual replacement for the much larger, heavier AH-64 Apache? This is a story of great accomplishment and much frustration. This is the Comanche history, as told by the some of the key members of the Comanche development team--

**The Sikorsky Legacy** Sergei I. Sikorsky, The Igor I. Sikorsky Historical Archives, 2007 This book traces the history of Sikorsky aviation and its founder, Igor I. Sikorsky, one of the most talented and versatile aeronautical pioneers in history. Sikorsky's aviation career spanned over 60 years and was highlighted by three major achievements: the creation of the world's first four-engine airliner; the record-breaking Clipper Ships, with which Pan American Airways explored transpacific and transatlantic airline service; and the development of the helicopter. Sikorsky then led his engineers out of the piston-engine era and into the jet age with the design and development of some of the most widely used turbine-powered helicopters in aviation history. More than 200 photographs, many from the Sikorsky family archives, document the genius of Sikorsky's intuitive engineering and his lifelong interest in the challenge of the helicopter, which many historians consider to be his

crowning achievement.

*Comanche RAH-66-21st Century Multi-Mission Helicopter* ,1996 The end of the Cold War did not bring an end to the challenges facing the defense of the United States. In fact, the world has become more unstable with the dismantling of the Soviet Union. The flow of sophisticated arms to anyone with hard currency has increased regional instability. Ethnic and religious strife has re-emerged. And as the armed forces of small countries acquire high technology weapons, the threat of eventual American involvement increases. Shrinking American defense budgets and reduced U.S. presence overseas will require a smaller, highly mobile Army. An Army that can rapidly deploy to trouble spots around the globe, find and defeat a wide range of threats, and be supportable in the field without a burdensome logistics tail. DoD studies reveal that battlefield success is heavily contingent on good reconnaissance. And Desert Storm proved that satellite and fixed wing reconnaissance assets cannot provide the close battle target information needed in highly fluid tactical situations. Neither can the Army's current light helicopter fleet. The OH-58, OH-6, and AH-1 light helicopters are over 30 years old when the first Comanche is fielded. They lack range, speed, payload, and agility. They are expensive to operate, especially in harsh desert environments. They lack low observable features necessary to operate and survive on the modern battlefield, and are vulnerable to ground fire. They cannot operate safely at night or in adverse weather. And, they cannot be upgraded to meet the challenges the U.S. will face in the future. Only RAH-66 Comanche has been designed to fulfill these requirements and enhance the effectiveness of Army Force Projections.

**American Military Helicopters and Vertical/Short Landing and Takeoff Aircraft Since 1941** E.R. Johnson,Ted Williams,2021-11-29 Over the past eight decades, developments in vertical lift aircraft--both helicopters and vertical/short takeoff and landing (V/STOL) planes--have given the

American military unparalleled capabilities on the modern battlefield. The U.S. has led the world in vertical lift technologies with the help of some of the brightest minds in this field--Igor I. Sikorsky, Arthur M. Young, Frank N. Piasecki, Charles H. Kaman and Stanley Hiller, Jr., to name a few--and by having the industrial prowess to make their concepts reality. This book provides a concise historical survey, including technical specifications, drawings, and photographs of every type of helicopter and V/STOL aircraft developed for the U.S. military, from the earliest examples tested in 1941 and 1942, up to the newest prototypes.

Evaluation of an Army Aviator's Ability to Conduct Ingress and Egress of the RAH-66 Comanche Crew Station While Wearing the Air Warrior Ensemble Joshua S. Kennedy, David B. Durbin, Jim A. Faughn, Richard W. Kozycki, Kyle J. Nebel, 2004-12-01 The RAH-66 Comanche represented the U.S. Army's next generation state-of-the-art armed reconnaissance helicopter. Likewise, the Air Warrior aviation life support ensemble worn by Army aviators represents a significant improvement in personal clothing and equipment. However, at the intersection of the Comanche's crew stations and the bulkiness of the Air Warrior ensemble lies a potential problem: pilots have difficulty entering and leaving the crew station, especially in an emergency. This study evaluated an Army aviator's ability to conduct ingress and egress of the Comanche while wearing the Air Warrior ensemble. Several operationally relevant combinations of aircrew anthropometry, Air Warrior ensembles, and ingress-egress routes were evaluated for the front and rear crew stations. Jack human-figure modeling and motion capture technology were also used in the evaluation. Mean emergency egress times were found to be well within published military specifications. However, results show that larger males will likely have a significantly more difficult time leaving the aircraft than smaller persons, especially when clothed in the bulkiest Air Warrior configuration. Several operational and design

recommendations are made. In February 2004, the Department of the Army cancelled the RAH-66 Comanche program. However, the information contained in this report can be used for ingress and egress testing of new or modified aviation systems.

**US Military Helicopters** Michael Green, 2017 The helicopter came on the scene too late to play other than a minor role in the Second World War but by the Korean conflict the Bell H-13 Sioux, OH-23 Raven and Sikorsky H-19 Chickasaw were in service. It was in Vietnam that the US military helicopters really came into their own and the best known were the Bell UH-1 Iriquois (known as the Huey), the Boeing CH-47 Chinook and the massive CH-53 Mojave. The USAF combat search and rescue Jolly Green Giant was indispensable. Attack helicopters have evolved from the early Huey Cobra or Snake and the Boeing AH-64 Apache came into service in the late 80s when the Sikorsky UH-60 series became the military general purpose chopper. All these formidable aircraft and many more are covered in detail in this superbly illustrated and comprehensive book.

**Apache AH-64 Boeing (McDonnell Douglas) 1976-2005** Chris Bishop, 2011-07-20 The Boeing (McDonnell Douglas, formerly Hughes) AH-64A Apache is the US Army's primary attack helicopter, and the most advanced helicopter gunship flying today. The most expensive rotary-winged aircraft ever built when it was introduced in the early 1980s, it has since proved its worth on battlefields all over the world, seeing action in the Gulf War, Afghanistan, Bosnia, Kosovo and the recent conflict in Iraq. This book examines the design, development and deployment of a quick-reacting, airborne weapons system that can fight close and deep to destroy, disrupt, or delay enemy forces.

An Analysis of the Impact of Reliability and Maintainability on the Operating and Support (O&S) Costs and Operational Availability (AO) of the RAH- 66 Comanche Helicopter Gregg M.

Dellert,2001-12-01 The RAH-66 Comanche helicopter program was initiated in 1983 to develop a reliable and maintainable attack/reconnaissance aircraft to replace the aging feet of AH-1 Cobra and OH-58 A/C helicopters. After several funding reductions and restructurings, the program entered the Engineering and Manufacturing Development (EMD) stage of the acquisition process in 2000. With only four years remaining until initial fielding, the program office is still attempting to reach the ambitious reliability and maintainability goals needed to experience reduced operating and support (O&S) costs and high operational availability (Ao). This thesis analyzes the impact of reliability and maintainability on the O&S costs and Ao of the Comanche helicopter. The research focused on the question of where the Comanche program office should allocate resources to minimize O&S costs and maximize Ao. The research indicated that the best allocation of resources is to the improvement of system reliability. The negative impact to both O&S costs and Ao is significant if the predicted reliability goals are not met.

Principles of Helicopter Aerodynamics with CD Extra Gordon J. Leishman,2006-04-24 Written by an internationally recognized teacher and researcher, this book provides a thorough, modern

treatment of the aerodynamic principles of helicopters and other rotating-wing vertical lift aircraft such as tilt rotors and autogiros. The text begins with a unique technical history of helicopter flight, and then covers basic methods of rotor aerodynamic analysis, and related issues associated with the performance of the helicopter and its aerodynamic design. It goes on to cover more advanced topics in helicopter aerodynamics, including airfoil flows, unsteady aerodynamics, dynamic stall, and rotor wakes, and rotor-airframe aerodynamic interactions, with final chapters on autogiros and advanced methods of helicopter aerodynamic analysis. Extensively illustrated throughout, each chapter includes a set of homework problems. Advanced undergraduate and graduate students, practising engineers, and researchers will welcome this thoroughly revised and updated text on rotating-wing aerodynamics.

*Computerized Ballistic Modeling of the Comanche Tailfan Shroud* Allen H. Stephan, 2000 The U.S. Army has contracted Boeing-Sikorsky to develop the RAH-66 Comanche, a new, armed reconnaissance helicopter that features stealth technology designed to improve survivability when operating in hostile environments. Ballistic testing is required on the Comanche prior to fielding. Computer based simulations are being employed in order to reduce requirements for expensive live-fire testing. This thesis uses a computer program called Dytran from MacNeal-Schwendler to simulate the effects of an explosive round detonating in the Comanche tailfan shroud. Six test cases involving explosions with varying amounts of explosive energy, or specific internal energy, are evaluated. From these tests, a curve showing the percentage of structural failure versus the specific internal energy is plotted. Assuming that 20% structural failure of the model equates to a catastrophic failure, this analysis shows that the analyzed section of the Comanche tailfan shroud can withstand an explosion with a specific internal energy of  $2.58 \times 10^3$  in lsec. Any potential

threat rounds with specific internal energies greater than  $2.58 \times 10^{10} \text{ in}^2/\text{sec}^2$  will pose serious threats to the Comanche.
