Our First Book - Fine Taxidermy Jaap Sinke, Ferry van Tongeren, Helen Chislett, 2018 Jaap Sinke and Ferry van Tongeren are dedicated to showing the beauty of nature through their flamboyant compositions of Fine Taxidermy. In the seventeenth century, the great painters of the Golden Age set out to portray the wonder of exotic animals brought back to Europe for the first time. Today, Sinke and van Tongeren have reclaimed that power to amaze, creating taxidermy art in homage to the skill and passion of the Old Masters and to their muse -- the naturalist, Charles Darwin.--Publisher's description

The Invisible Gorilla Christopher Chabris, Daniel Simons, 2011-06-07 Reading this book will make you less sure of yourself—and that's a good thing. In *The Invisible Gorilla*, Christopher Chabris and Daniel Simons, creators of one of psychology's most famous experiments, use remarkable stories and counterintuitive scientific findings to demonstrate an important truth: Our minds don't work the way we think they do. We think we see ourselves and the world as they really are, but we're actually missing a whole lot. Chabris and Simons combine the work of other researchers with their own findings on attention, perception, memory, and reasoning to reveal how faulty intuitions often get us into trouble. In the process, they explain: • Why a company would spend billions to launch a product that its own analysts know will fail • How a police officer could run right past a brutal assault without seeing it • Why award-winning movies are full of editing mistakes • What criminals have in common with chess masters • Why measles and other childhood diseases are making a comeback • Why money managers could learn a lot from weather forecasters Again and again, we think we experience and understand the world as it is, but our thoughts are beset by everyday illusions. We write traffic laws and build criminal cases on the assumption that people will notice when something unusual happens right in front of them. We're sure we know where we were on 9/11, falsely believing that vivid memories are seared into our minds with perfect fidelity. And as a society, we spend billions on devices to train our brains because we're continually tempted by the lure of quick fixes and effortless self-improvement. *The Invisible Gorilla* reveals the myriad ways that our intuitions can deceive us, but it's much more than a catalog of human failings. Chabris and Simons

explain why we succumb to these everyday illusions and what we can do to inoculate ourselves against their effects. Ultimately, the book provides a kind of x-ray vision into our own minds, making it possible to pierce the veil of illusions that clouds our thoughts and to think clearly for perhaps the first time.

Gorilla Society Alexander H. Harcourt, Kelly J. Stewart, 2008-09-15 Societies develop as a result of the interactions of individuals as they compete and cooperate with one another in the evolutionary struggle to survive and reproduce successfully. *Gorilla society* is arranged according to these different and sometimes conflicting evolutionary goals of the sexes. In seeking to understand why gorilla society exists as it does, Alexander H. Harcourt and Kelly J. Stewart bring together extensive data on wild gorillas, collected over decades by numerous researchers working in diverse habitats across Africa, to illustrate how the social system of gorillas has evolved and endured. *Gorilla Society* introduces recent theories explaining primate societies, describes gorilla life history, ecology, and social systems, and explores both sexes' evolutionary strategies of survival and reproduction. With a focus on the future, Harcourt and Stewart conclude with suggestions for future research and conservation. An exemplary work of socioecology from two of the world's best known gorilla biologists, *Gorilla Society* will be a landmark study on a par with the work of George Schaller—a synthesis of existing research on these remarkable animals and the societies in which they live.

Painted Paper Alisa Golden, 2009 Create decorated paper as beautiful as any found in an art store and with more distinctive and personal patterns, too. From artist books and journals to greeting cards, collages and more, these techniques work on any paper surface and give numerous new skills to the crafter. From basic patterning to paste paper frottage, plus a selection of nine projects, this book is a treasury of ideas.

Surfing Uncertainty Andy Clark, 2016 This title brings together work on embodiment, action, and the predictive mind. At the core is the vision of human minds as prediction machines - devices that constantly try to stay one step ahead of the breaking waves of sensory stimulation, by actively predicting the incoming flow. In every situation we encounter, that complex prediction machinery is already buzzing, proactively trying to anticipate the sensory barrage. The book shows in detail how this strange but potent strategy of self-anticipation ushers perception, understanding, and imagination simultaneously onto the cognitive stage.

Objects: USA 2020 Glenn Adamson, 2020-10-27 *Objects: USA 2020* hails a new generation of artist-craftspeople by revisiting a groundbreaking event that redefined

American art. In 1969, an exhibition opened at the Smithsonian Institution that redefined American art. *Objects: USA* united a cohort of artists inventing new approaches to art-making by way of craft media. Subsequently touring to twenty-two museums across the country, where it was viewed by over half a million Americans, and then to eleven cities in Europe, the exhibition canonized such artists as Anni Albers, Sheila Hicks, Wharton Esherick, Wendell Castle, and George Nakashima, and introduced others who would go on to achieve widespread art-world acclaim, including Dale Chihuly, Michele Oka Doner, J. B. Blunk, and Ron Nagle. *Objects: USA 2020* revisits this revolutionary exhibition and its accompanying catalog--which has become a bible of sorts to curators, gallerists, dealers, craftspeople, and artists--by pairing fifty participants from the original exhibition with fifty contemporary artists representing the next generation of practitioners to use--and upend--the traditional methods and materials of craft to create new forms of art. Published to coincide with an exhibition of the same title at the renowned gallery R & Company, and featuring essays by some of the foremost authorities on craft at the intersection of art, including Glenn Adamson, curator and former director of the Museum of Arts & Design; James Zemaitis, curator and former head of twentieth-century design at Sotheby's; and Lena Vigna, curator of exhibitions at the Racine Art Museum; an interview with Paul J. Smith, the cocurator of *Objects: USA*; archival photographs of the original exhibition and important historical works; and lush full-color images of contemporary works, *Objects: USA 2020* is an essential art historical reference that traces how craft was elevated to the status of museum-quality art, and sets its trajectory forward.

Models.Behaving.Badly. Emanuel Derman, 2011-10-25 Now in paperback, "a compelling, accessible, and provocative piece of work that forces us to question many of our assumptions" (Gillian Tett, author of *Fool's Gold*). Quants, physicists working on Wall Street as quantitative analysts, have been widely blamed for triggering financial crises with their complex mathematical models. Their formulas were meant to allow Wall Street to prosper without risk. But in this penetrating insider's look at the recent economic collapse, Emanuel Derman--former head quant at Goldman Sachs--explains the collision between mathematical modeling and economics and what makes financial models so dangerous. Though such models imitate the style of physics and employ the language of mathematics, theories in physics aim for a description of reality--but in finance, models can shoot only for a very limited approximation of reality. Derman uses his firsthand experience in financial theory and practice to explain the complicated tangles that have paralyzed the economy. *Models.Behaving.Badly.* exposes Wall Street's love affair with models, and shows us why nobody will ever be able to write a model that can encapsulate human behavior.
