Tanks in Detail Terry Gander,2003 Although the Medium Tank M3 series was regarded from the outset as an interim vehicle until something better arrived, it was produced in thousands and managed to serve many users reliably and well until 1945, and even after. The main 75mm gun helped considerably to turn the North African desert campaigns in the Allies' favour and, although withdrawn from front-line service as soon as better combat vehicles became available, the basic design of the M3 proved highly adaptable for many other armoured warfare roles, from armoured recovery to self-propelled artillery. Although something of an Ugly Duckling in tank design terms, the M3 series proved to be highly significant and successful combat vehicles. Book jacket.

"Ironsides" Harold A. Skaarup,2011-08-12 Major Hal Skaarup has woven together an informative and detailed synopsis of the carefully preserved and restored armoured fighting vehicles on display in Canada. He highlights the importance of these upon key turning points in history when these AFVs were in use as tools of war at home and overseas. We often associate the evolution of military prowess with the advancement of sophisticated technology. Major Skaarup's descriptions of Canadian armour as it evolved to the level it has today reveals that military planners have had to be continuously creative in adapting to the changes in modern combat. They had to devise many intricate techniques, tactics and procedures to overcome the insurgents and opposition forces faced in Afghanistan and future overseas missions where Canadian armour will be brought into play. This guide book will show the interested reader where to find examples of the historical armour preserved in Canada, and perhaps serve as a window on how Canada's military contribution to safety and security in the world has evolved.

American Military Vehicles of World War I Albert Mroz,2009-10-21 In World War I the American motor vehicle industry was tested by the sudden appearance of vast transport challenges. The nation's immense manufacturing capabilities and abundant natural resources combined with increased standardization and mass production to enable the industry to meet the military's needs. Motor vehicles and aircraft were quickly cemented as the most influential military tools of the early twentieth century. This book both describes the development and use of a wide range of specialized motor vehicles during World War I and analyzes how their advent indelibly altered modern warfare and transportation.

M8 Greyhound Light Armored Car 1941–91 Steven J. Zaloga,2012-09-20 The M8 light armored car was the only significant wheeled combat vehicle used by the US Army in World War II. In conjunction with the lightly armed utility version, the M20, it was the staple of the army's cavalry squadrons for use in reconnaissance and scouting. First entering combat in Italy in 1943, it was widely used throughout the campaign in northwest Europe, though its off-road performance was found to be wanting. This title describes the design and development of the M8, covering the many variants that were produced during World War II and afterwards, along with a comprehensive survey of its operational use.

Designing the T-34 Peter Samsonov,2019-12-27 When the German army launched Operation Barbarossa – the invasion of the Soviet Union – on June 22, 1941, it was expecting to face and easily defeat outdated and obsolete tanks and for the most part it did, but it also received a nasty shock when it came up against the T-34. With its powerful gun and sloped armour, the T-34 was more than a match for the best German tanks at that time and the Germans regarded it with awe. German Field Marshal von Kleist, who commanded the latter stages of Barbarossa, called it ‘the finest tank in the world’. Using original wartime documents author and historian Peter Samsonov, creator of the Tank Archives blog, explains how the Soviets came to develop what was arguably the war's most revolutionary tank design.

IMPLICATIONS FOR THEORY AND PRACTICE: This article synthesizes the presented research field's importance and relevance, connecting its theoretical background with practical research. Recommendations and implications for future trends of this research stream might also be helpful for professionals and academicians. ORIGINALITY AND VALUE: The novel studies presented in this issue were done in five different (developing and developed) countries and business sectors that present human-based and non-human-based factors as crucial factors needed to empower business transformation in a complex world. Each group of elements is essential in business success, and their components are interdependent.
