Catch Me If You Can Frank W. Abagnale, Stan Redding, 2002-11-19 The uproarious, bestselling true story of the world's most sought-after con man, immortalized by Leonardo DiCaprio in DreamWorks' feature film of the same name, from the author of Scam Me If You Can. Frank W. Abagnale, alias Frank Williams, Robert Conrad, Frank Adams, and Robert Monjo, was one of the most daring con men, forgers, imposters, and escape artists in history. In his brief but notorious criminal career, Abagnale donned a pilot's uniform and copiloted a Pan Am jet, masqueraded as the supervising resident of a hospital, practiced law without a license, passed himself off as a college sociology professor, and cashed over \$2.5 million in forged checks, all before he was twenty-one. Known by the police of twenty-six foreign countries and all fifty states as The Skywayman, Abagnale lived a sumptuous life on the lam—until the law caught up with him. Now recognized as the nation's leading authority on financial foul play, Abagnale is a charming rogue whose hilarious, stranger-than-fiction international escapades, and ingenious escapes—including one from an airplane—make *Catch Me If You Can* an irresistible tale of deceit.

A MiG-15 to Freedom No Kum-Sok, J. Roger Osterholm, 2007-04-25 On September 21, 1953, U.S. airmen at Kimpo Air Base near Seoul, Korea, were startled to see landing a MiG-15, the most advanced Soviet-built fighter plane of the era, piloted by Senior Lieutenant No Kum-Sok, a 21-year-old North Korean Air Force officer. Once he landed, Lieutenant No found that his mother had escaped to the South two years earlier, and they were soon reunited. At his request, No came to the United States and became a U.S. citizen. His story provides a unique insight into how North Korea conducted the Korean War and how he came to the decision to leave his homeland.

F-86 Sabre vs MiG-15 Douglas C. Dildy, Warren Thompson, 2013-05-20 As the routed North Korean People's Army (NKPA) withdrew into the mountainous reaches of their country and the People's Republic of China (PRC) funneled in its massive infantry formations in preparation for a momentous counter-offensive, both lacked adequate air power to challenge US and UN. Reluctantly, Josef Stalin agreed to provide the requisite air cover, introducing the superior swept-wing MiG-15 to counter the American's straight-wing F-80 jets. This in turn prompted the USAF to deploy its very best – the F-86A Sabre – to counter this threat. Thus began a two-and-a-half-year struggle in the skies known as “MiG Alley.” In this period, the unrelenting campaign for aerial superiority witnessed the introduction of successive models of these two revolutionary jets into combat. This meticulously researched study not only provides technical descriptions of the two types and their improved variants, complete with a “fighter pilot's assessment” of these aircraft, but also chronicles the entire scope of their aerial duel in “MiG Alley” by employing the recollections of the surviving combatants – including Russian, Chinese, and North Korean pilots – who participated.

How to Make Origami Airplanes That Fly Gery Hsu, 2012-03-07 Create 12 different models that actually fly: space shuttle, futuristic shuttle, flying wing, delta-wing jet, fighter plane, interceptor, double tail fighter, dart plane, fighter plane with engines, futuristic fighter, and two jets.

MiG Alley Thomas McKelvey Cleaver, 2021-02-23 Titled after the wartime nickname for the part of North Korea that was the epicentre of a bitter struggle for air superiority over the Korean Peninsula, MiG Alley offers an in-depth analysis of the US Air Force's war in Korea, packed with interesting and exciting personal stories based on first-person testimony from both American and Soviet sources. Following the end of the Korean War, the prevailing myth in the West was that of the absolute supremacy of US Air Force pilots and aircraft over their Soviet-supplied opponents. The claims of the 10:1 victory-loss ratio achieved by the US Air Force fighter pilots flying the North American F-86 Sabre against their communist adversaries, among other such fabrications, went unchallenged until the end of the Cold War, when Soviet records of the conflict were finally opened. Packed with first-hand accounts and covering the full range of US Air Force activities over Korea, MiG Alley brings the war vividly to life and the record is finally set straight on a number of popular fabrications. Thomas McKelvey Cleaver expertly threads together US and Russian sources to reveal the complete story of this bitter struggle in the Eastern skies.

Focke Wulf Jet Fighters Justo Miranda, 2017-12-14 The biggest success of the Focke Wulf company during the Second World War was the choice of a radial engine for the Fw 190 fighter, in this way avoiding to compete against Messerschmitt for the in line engines. The decision of the Oberkommando der Luftwaffe to assign the few turbojets available to the Messerschmitt and Arado firms and the discovery of the terrible aerodynamic effect known as compressibility buffeting by mid-1942, made the life of fighter designers of the time very interesting. The Kurt Tank team proposed to install a centrifugal turbojet of his design in the nose of an Fw 190 A/3 with the intention of replacing it with a Jumo 004 B when available in 1943. Several designs followed that were able to use all turbojets, turboprops, ramjets and rocket engines, either projected or at their disposal. They constitute the documental foundation of this book. After failing in the TL Jagdflugzeug contests in March 1943, Volksflugzeug in September 1944 and Hochleistungs Nachtjäger in January 1945, Focke Wulf could finally overcome its competitors with the great Jägernotprogramm design Ta 183. Although it was too late to intervene in the Second World War, it served as inspiration for numerous designs of other countries during the first years of the Cold War.

Mikoyan's Piston-Engined Fighters Yefim Gordon, Keith Dexter, 2003 This latest title in Midland's Red Star series describes in detail the first aircraft--a series of piston-engined fighters--produced by the famous Mikoyan Design Bureau during and immediately after World War II. The first of these, the I-200 of 1940, entered limited production the following year as the MiG-1, which was quickly developed into the MiG-3, a high altitude interceptor. This book discusses these aircrafts' operational history and describes the standard production type and the experimental variants. It also covers the unusual I-250 (N) mixed-power fighter, which, with a 'pseudo-turbojet' booster, had a top speed of 513 mph--impressive in its day. Though only a handful were built, the I-250 was the final step toward the MiG-9 of 1945, the Soviet Union's first true jet fighter.

MiG-23/27 Flogger E. Gordon, Yefim Gordon, Keith Dexter, 2005 The latest title in the renowned Aerofax series is a detailed history of the development and operation of the Soviet interceptor, the MiG23/27, code named in the west, Flogger. In the era of the Cold War, the military planners on both sides of the Iron Curtain were very aware of the threat to their security both from bombers which could carry nuclear weapons and from spyplanes. Thus it was deemed essential to have fast fighter aircraft which could intercept and destroy such incoming threats. The MiG-23

was developed to succeed the MiG-21 as the standard Soviet interceptor. It was a major advance on the earlier aircraft. Its swing-wing configuration was a generation on from its predecessor. Deliveries began in 1972 and in excess of 3,000 aircraft were built before production ended in 1986. As was the case with many Soviet types, the MiG-23 was widely exported to satellite or friendly countries. The MiG-23 saw service with air forces in the Middle East, the Far East, Cuba and Eastern Europe and a licenced version was built in India. The book also covers the history and operation of the MiG-27, a development of the MiG-23. This was a tactical strike aircraft with a completely redesigned forward fuselage which was produced in significant quantities from the late 1970s onwards. Both of these important types will be covered in the usual and well regarded Aerofax style which combines a thoroughly researched narrative with many photographs. This volume in the series will complete the Aerofax coverage of MiG design bureau's major modern types.

Boyd Robert Coram, 2002-11-21 John Boyd may be the most remarkable unsung hero in all of American military history. Some remember him as the greatest U.S. fighter pilot ever -- the man who, in simulated air-to-air combat, defeated every challenger in less than forty seconds. Some recall him as the father of our country's most legendary fighter aircraft -- the F-15 and F-16. Still others think of Boyd as the most influential military theorist since Sun Tzu. They know only half the story. Boyd, more than any other person, saved fighter aviation from the predations of the Strategic Air Command. His manual of fighter tactics changed the way every air force in the world flies and fights. He discovered a physical theory that forever altered the way fighter planes were designed. Later in life, he developed a theory of military strategy that has been adopted throughout the world and even applied to business models for maximizing efficiency. And in one of the most startling and unknown stories of modern military history, the Air Force fighter pilot taught the U.S. Marine Corps how to fight war on the ground. His ideas led to America's swift and decisive victory in the Gulf War and foretold the terrorist attacks of September 11, 2001. On a personal level, Boyd rarely met a general he couldn't offend. He was loud, abrasive, and profane. A man of daring, ferocious passion and intractable stubbornness, he was that most American of heroes -- a rebel who cared not for his reputation or fortune but for his country. He was a true patriot, a man who made a career of challenging the shortsighted and self-serving Pentagon bureaucracy. America owes Boyd and his disciples -- the six men known as the Acolytes -- a great debt. Robert Coram finally brings to light the remarkable story of a man who polarized all who knew him, but who left a legacy that will influence the military -- and all of America -- for decades to come . . .

Scenes from an Unfinished War Daniel P. Bolger, Combat Studies Institute, 2011-01-01 Low-intensity conflict (LIC) often has been viewed as the wrong kind of warfare for the American military, dating back to the war in Vietnam and extending to the present conflicts in Iraq and Afghanistan. From the American perspective, LIC occurs when the U.S. military must seek limited aims with a relatively modest number of available regular forces, as opposed to the larger commitments that bring into play the full panoply of advanced technology and massive commitments of troops. Yet despite the conventional view, U.S. forces have achieved success in LIC, albeit under the radar and with credit largely assigned to allied forces, in a number of counterinsurgency wars in the 1960s. *Scenes from an Unfinished War: Low-Intensity Conflict in Korea, 1966-1969* focuses on what the author calls the Second Korean conflict, which flared up in November 1966 and sputtered to an ill-defined halt more than three years later. During that time, North Korean special operations teams had challenged the U.S. and its South Korean allies in every category of low-intensity conflict - small-scale skirmishes along the Demilitarized Zone between the two Koreas, spectacular terrorist strikes, attempts to foment a viable insurgency in the South, and even the seizure of the USS Pueblo - and failed. This book offers a case study in how an operational-level commander, General Charles H. Bonesteel III, met the challenge of LIC. He and his Korean subordinates crafted a series of shrewd, pragmatic measures that defanged North Korea's aggressive campaign. According to the convincing argument made by *Scenes from an Unfinished War*, because the U.S. successfully fought the wrong kind of war, it likely blocked another kind of wrong war - a land war in Asia. The Second Korean Conflict serves as a corrective to assumptions about the American military's abilities to formulate and execute a winning counterinsurgency strategy. Soviet and Russian Military Aircraft in Asia Dmitriy Komissarov, Yefim Gordon, 2014 After the end of the Second World War, the Soviet Union tried to exert its political influence on the Asian continent. A major pillar of this cold-war policy was the widespread supply of arms to the Continent including many combat, transport, training and

utility aircraft. Soviet and Russian Military Aircraft in Asia reviews in detail the Soviet and Russian aircraft types used throughout Asia, starting in the 1950s and continuing through to the present day. Each nation is reviewed individually with an overview of the types used, their service record (including combat in conflicts of varying intensities) and extensive tables of individual aircraft with serials, construction numbers, versions and notes. Although the ubiquitous MiG fighters and Mil helicopters feature prominently, there are many other types to consider and aircraft from all the leading design bureaux, including Antonov, Beriyev, Il'yushin, Kamov, Sukhoi, Tupolev and Yakovlev are covered in this book. Chinese 'copies' of Soviet designs are reviewed and also included are those quasi-military and ostensibly civilian transports which have clearly been operated largely on behalf of the military. Soviet and Russian Military Aircraft in Asia is a treasure trove of exotic colours and markings, combined with a mass of unpublished, original information including over 320 photos, over 140 colour profiles and around 50 insignia to delight modellers and fascinate all readers.
