event notifications and create Lambda functions Manage common operations with AWS SDKs In Detail Amazon S3 is one of the most famous and trailblazing cloud object storage services, which is highly scalable, low-latency, and economical. Users only pay for what they use and can store and retrieve any amount of data at any time over the Internet, which attracts Hadoop users who run clusters on EC2. The book starts by showing you how to install several AWS SDKs such as iOS, Java, Node.js, PHP, Python, and Ruby and shows you how to manage objects. Then, you'll be taught how to use the installed AWS SDKs to develop applications with Amazon S3. Furthermore, you will explore the Amazon S3 pricing model and will learn how to annotate S3 billing with cost allocation tagging. In addition to this, the book covers several practical recipes about how to distribute your content with CloudFront, secure your content with IAM, optimize Amazon S3 performance, and notify S3 events with Lambda. By the end of this book, you will be successfully implementing pro-level practices, techniques, and solutions in Amazon S3. Style and approach A step-by-step practical guide that will show you how to efficiently store, manage, and control your data in Amazon S3.

Asian Sacred Natural Sites Bas Verschuuren, Naoya Furuta, 2016-08-12 Nature conservation planning tends to be driven by models based on Western norms and science, but these may not represent the cultural, philosophical and religious contexts of much of Asia. This book provides a new perspective on the topic of sacred natural sites and cultural heritage by linking Asian cultures, religions and worldviews with contemporary conservation practices and approaches. The chapters focus on the modern significance of sacred natural sites in Asian protected areas with reference, where appropriate, to an Asian philosophy of protected areas. Drawn from over 20 different countries, the book covers examples of sacred natural sites from all of IUCN's protected area categories and governance types. The authors demonstrate the challenges faced to maintain culture and support spiritual and religious governance and management structures in the face of strong modernisation across Asia. The book shows how sacred natural sites contribute to defining new, more sustainable and more equitable forms of protected areas and conservation that reflect the worldviews and beliefs of their respective cultures and religions. The book contributes to a paradigm-shift in conservation and protected areas as it advocates for greater recognition of culture and spirituality through the adoption of biocultural conservation approaches.
