**Launch Magazine's History of American Rocketry** Mark Mayfield, 2021-09-21 A must-have for anyone fascinated by space travel, rocketry, NASA, SpaceX, and more! A new era in spaceflight, led by SpaceX and other commercial rocket companies, is generating the kind of worldwide interest in space travel that we haven't seen since the space race of the 1960s. Kids are dreaming of becoming astronauts again. New feats, such as SpaceX's remarkable ability to land booster rockets, under powered descent, back on land or sea has galvanized a new generation of rocket enthusiasts. Yet none of this would be possible without the advances of rocketry over the past century. The Chinese were the first to develop black-powder fireworks and rockets centuries ago, but modern rocketry truly began with Robert Goddard's launch of a liquid-fueled rocket on a Massachusetts farm in 1926. That metal contraption—which flew just 41 feet high before arching over and streaking 184 feet into a cabbage patch—came just 43 years before Neil Armstrong stepped foot on the moon on July 20, 1969. Armstrong's Apollo 11 mission was made possible by a giant 36-story-tall Saturn V rocket that used some of the same propulsion principles as Goddard's first tiny, crude rockets. The beginning of the "Space Age" is considered to be Russia's launch of the world's first satellite, Sputnik, in 1957. But it was the pioneering human spaceflights of the 1960s that captured the imagination of the world and turned astronauts into heroes. Weapons of war—the Redstone, Atlas, and Titan II missiles—were converted into civilian launch boosters and led to the success of the Mercury and Gemini programs. All the while, Saturn rockets were being developed that would ultimately lead to the moon missions. Kids were so excited about these pioneering space flights that an entirely new hobby—model rocketry—was created to serve their interests. Small scale models of NASA's big rockets were ordered by the millions, generating a \$100 million hobby at a time when there were no video games, no internet, and no cable, just three broadcast television networks. Now, the next generation of rockets from SpaceX and other commercial companies, along with NASA's new launch vehicles and Orion spacecraft, will lead the United States and the world into a new era of rocketry—beginning with crewed flights to the moon as early as 2024, and ultimately to Mars within the first half of this century.

**Launch Magazine's History of Rockets and Model Rockets** Mark Mayfield, 2007-11 Launch Magazine heralds itself as devoted to spaceflight, hobby rocketry, and consumer aerospace. Here the magazine's editor-in-chief tells the history of rockets and the models inspired by these out-of-this-world machines. More than 150 photos and illustrations, as well as expert text, cover such groundbreaking moments in space travel as the first manned spacecraft and the first moon walk; the many missions to Mars; and the journeys to Jupiter and Saturn to track their amazing weather patterns and mysterious moons. And back at home, we step outside into an American backyard as a

father and son craft a model rocket... and send it soaring into the afternoon sky.

**Paper Astronaut** Juliette Cezzar,2009-06-23 From the creator of Paper Pilot and Paper Captain, Paper Astronaut is a beautifully illustrated voyage into deep space, combining stunning archival photographs and colorful technical drawings with expertly designed die-cut models that readers can actually cut out and assemble. Published for the fortieth anniversary of the moon landing in 1969—and introduced by Buzz Aldrin—the book includes histories of twenty feats of aeronautic engineering drawn from half a century of space programs around the world, from Apollo 11 to the Soviet space station Mir and China's Shenzhou 7 capsule, and featuring the most iconic designs of fifty years of space exploration. Each spacecraft is accompanied by amazing stories, fascinating facts and statistics about the universe around them, and mesmerizing photographs of the vessels in space. Sixty-four pages of the book are devoted to finely crafted die-cut paper models of the featured rockets, presented with clear instructions for assembly and helpful advice for deploying your galactic fleet.

Reusable Rocket Engine Operability Modeling and Analysis National Aeronautics and Space Administration,2018-11-08 This paper describes the methodology, model, input data, and analysis results of a reusable launch vehicle engine operability study conducted with the goal of supporting design from an operations perspective. Paralleling performance analyses in schedule and method, this requires the use of metrics in a validated operations model useful for design, sensitivity, and trade studies. Operations analysis in this view is one of several design functions. An operations concept was developed given an engine concept and the predicted operations and maintenance processes incorporated into simulation models. Historical operations data at a level of detail suitable to model objectives were collected, analyzed, and formatted for use with the models, the simulations were run, and results collected and presented. The input data used included scheduled and unscheduled timeline and resource information collected into a Space Transportation System (STS) Space Shuttle Main Engine (SSME) historical launch operations database. Results reflect upon the importance not only of reliable hardware but upon operations and corrective maintenance process improvements. Christenson, R. L. and Komar, D. R. *Creating Space* Mat Irvine,2002 Foreword by Sir Arthur C Clarke. Space exploration began with model and toy rockets. History shows that the greatest Rocketeers began their careers flying model rockets. Now in this book the story of the space race is told in dazzling colour. From the birth of models to the present day the toy rockets have often inspired the real rockets of the future. In fact model manufacturers like Revell and Aurora were frequently in trouble with the defence department for revealing military secrets! This is the Story of the Space Age, and uses the models to illustrate the way history twisted and turned to put us where we are today -- and maybe how space travel will develop in the future.

**See You in the Cosmos** Jack Cheng,2017-02-28 "I haven't read anything that has moved me

this much since Wonder.” —Jennifer Niven, author of *All the Bright Places* A space-obsessed boy and his dog, Carl Sagan, take a journey toward family, love, hope, and awe in this funny and moving novel for fans of *Counting by 7s*, *Walk Two Moons*, and *The Curious Incident of the Dog in the Night-Time*. 11-year-old Alex Petroski loves space and rockets, his mom, his brother, and his dog Carl Sagan—named for his hero, the real-life astronomer. All he wants is to launch his golden iPod into space the way Carl Sagan (the man, not the dog) launched his Golden Record on the Voyager spacecraft in 1977. From Colorado to New Mexico, Las Vegas to L.A., Alex records a journey on his iPod to show other lifeforms what life on earth, his earth, is like. But his destination keeps changing. And the funny, lost, remarkable people he meets along the way can only partially prepare him for the secrets he’ll uncover—from the truth about his long-dead dad to the fact that, for a kid with a troubled mom and a mostly not-around brother, he has way more family than he ever knew. Jack Cheng’s debut is full of joy, optimism, determination, and unbelievable heart. To read the first page is to fall in love with Alex and his view of our big, beautiful, complicated world. To read the last is to know he and his story will stay with you a long, long time. Stellar. —Entertainment Weekly “Life-embracing.” —The Wall Street Journal Works beautifully. —The New York Times Book Review “Irresistible.” —The Chicago Tribune “The best I’ve read in a long, long time.” —Holly Goldberg Sloan, author of *Counting by 7s* “Riveting, inspiring, and sometimes hilarious.” —Kirkus, starred review “A propulsive stream-of-conscious dive.” —Publishers Weekly, starred review “A gift—a miracle.” —Paul Griffin, author *When Friendship Followed Me Home* “Exuberant.” —Booklist Full of the real kind of magic. —Ally Condie, author of *Matched* Absorbing, irresistible. —Common Sense Media “Incredible.” —BookRiot Full of innocence and unwavering optimism. —SLC Inspiring. —Time for Kids “Powerfully affirms our human capacity for grace and love and understanding.” —Gary D. Schmidt, author of *Okay for Now*
