Alexander S. Wilkinson

Illustration and Ornamentation in the Iberian Book World, 1450-1800 Alexander S.

Wilkinson,2021-11-25 In the early modern Iberian book world, as in the European book world more broadly, most works issuing from the presses contained some form of ornamentation. The nineteen contributions presented here cast light on these visual elements-on the production and ownership of printers' materials, and on the frequency with which these materials were exchanged and shared. A third of all items printed in the early modern Iberian world carried no imprint at all; for these items, woodblocks and engravings can assist scholars seeking to identify their place of origin or their date of publication. As importantly, decoration and illustration in early print can also reveal much about the history of the graphic arts and evolving forms of cultural representation--

Natural Climate Variability on Decade-to-Century Time Scales National Research

Council,Division on Earth and Life Studies,Commission on Geosciences, Environment and Resources,Climate Research Committee,1996-08-30 This volume reflects the current state of scientific knowledge about natural climate variability on decade-to-century time scales. It covers a wide range of relevant subjects, including the characteristics of the atmosphere and ocean environments as well as the methods used to describe and analyze them, such as proxy data and numerical models. They clearly demonstrate the range, persistence, and magnitude of climate variability as represented by many different indicators. Not only do natural climate variations have important socioeconomic effects, but they must be better understood before possible anthropogenic effects (from greenhouse gas emissions, for instance) can be evaluated. A topical essay introduces each of the disciplines represented, providing the nonscientist with a perspective on the field and linking the papers to the larger issues in climate research. In its conclusions section, the book evaluates progress in the different areas and makes recommendations for the direction and conduct of future climate research. This book, while consisting of technical papers, is also accessible to the interested layperson.

Spanish Arms and Armour Albert F. Calvert,2018-09-21 Reproduction of the original: Spanish Arms and Armour by Albert F. Calvert

Letters and Social Aims Ralph Waldo Emerson,1888

Books and Bookmen Andrew Lang,1887

State and Nation Making in Latin America and Spain Miguel A. Centeno,Agustin E.

Ferraro,2013-03-29 The growth of institutional capacity in the developing world has become a central theme in twenty-first-century social science. Many studies have shown that public institutions are an important determinant of long-run rates of economic growth. This book argues that to understand the difficulties and pitfalls of state building in the contemporary world, it is necessary to analyze previous efforts to create institutional capacity in conflictive contexts. It provides a comprehensive analysis of the process of state and nation building in Latin America and Spain from independence to the 1930s. The book examines how Latin American countries and Spain tried to build modern and efficient state institutions for more than a century - without much success. The Spanish and Latin American experience of the nineteenth century was arguably the first regional stage on which the organizational and political dilemmas that still haunt states were faced. This book provides an unprecedented perspective on the development and contemporary outcome of those state and nation-building projects.

The Cambridge History of War: Volume 2, War and the Medieval World David A. Graff,2020-10-01 Volume II of The Cambridge History of War covers what in Europe is commonly called 'the Middle Ages'. It includes all of the well-known themes of European warfare, from the migrations of the

Germanic peoples and the Vikings through the Reconquista, the Crusades and the age of chivalry, to the development of state-controlled gunpowder-wielding armies and the urban militias of the later middle ages; yet its scope is world-wide, ranging across Eurasia and the Americas to trace the interregional connections formed by the great Arab conquests and the expansion of Islam, the migrations of horse nomads such as the Avars and the Turks, the formation of the vast Mongol Empire, and the spread of new technologies – including gunpowder and the earliest firearms – by land and sea.

The Medieval Knight Christopher Gravett, 2020-11-26 The 'knight in shining armour' has become a staple figure in popular culture, and images of bloody battlefields, bustling feasting halls and courtly tournaments have been creatively interpreted many times in film and fiction. But what was the medieval knight truly like? In this fascinating title, former Senior Curator at the Royal Armouries Christopher Gravett describes how knights evolved over three centuries of English and European history, the wars they fought, their lives both in peacetime and on campaign, the weapons they fought with, the armour and clothing they wore and their fascinating code and mythology of chivalry. The text is richly illustrated with images ranging from manuscript illustrations to modern artwork reconstructions and many photographs of historic artefacts and sites.

History of the Decline and Fall of the Roman Empire Edward Gibbon, 2013-01-18 Gibbon offers an explanation for why the Roman Empire fell, a task made difficult by a lack of comprehensive written sources, though he was not the only historian to tackle the subject. Most of his ideas are directly taken from what few relevant records were available: those of the Roman moralists of the 4th and 5th centuries.

The Paleoanthropology and Archaeology of Big-Game Hunting John D. Speth, 2010-09-08 Since its inception, paleoanthropology has been closely wedded to the idea that big-game hunting by our hominin ancestors arose, first and foremost, as a means for acquiring energy and vital nutrients. This assumption has rarely been questioned, and seems intuitively obvious—meat is a nutrient-rich food with the ideal array of amino acids, and big animals provide meat in large, convenient packages. Through new research, the author of this volume provides a strong argument that the primary goals of big-game hunting were actually social and political—increasing hunter's prestige and standing—and that the nutritional component was just an added bonus. Through a comprehensive, interdisciplinary research approach, the author examines the historical and current perceptions of protein as an important nutrient source, the biological impact of a high-protein diet and the evidence of this in the archaeological record, and provides a compelling reexamination of this long-held conclusion. This volume will be of interest to researchers in Archaeology, Evolutionary Biology, and Paleoanthropology, particularly those studying diet and nutrition.
