Space Shuttle Missions Summary (NASA/TM-2011-216142) Robert D. Legler, Floyd V. Bennett, 2011-09-01 Full color publication. This document has been produced and updated over a 21-year period. It is intended to be a handy reference document, basically one page per flight, and care has been exercised to make it as error-free as possible. This document is basically as flown data and has been compiled from many sources including flight logs, flight rules, flight anomaly logs, mod flight descent summary, post flight analysis of mps propellants, FDRD, FRD, SODB, and the MER shuttle flight data and inflight anomaly list. Orbit distance traveled is taken from the PAO mission statistics.

The Art of NASA Piers Bizony, 2023-05-23 This special collector's edition of The Art of NASA adds 32 pages of new material, a presentation case, a new cover, a paper model of the Lunar Module, four postcards, and a rolled poster.

The Mars Project Wernher Von Braun, 1953 This classic on space travel was first published in 1953, when interplanetary space flight was considered science fiction by most of those who considered it at all. Here the German-born scientist Wernher von Braun detailed what he believed were the problems and possibilities inherent in a projected expedition to Mars. Today von Braun is recognized as the person most responsible for laying the groundwork for public acceptance of America's space program. When President Bush directed NASA in 1989 to prepare plans for an orbiting space station, lunar research bases, and human exploration of Mars, he was largely echoing what von Braun proposed in The Mars Project.

From Engineering Science to Big Science Pamela Etter Mack, 1998 This volume is a collection of 16 essays on the NACA and NASA aerospace research projects that received the prestigious Robert J. Collier Trophy. From NACA achievements such as the Whitcomb Area Rule and the NACA Engine Cowling to NASA landmarks such as the first Space Shuttle flight and the Hubble Space Telescope's first servicing mission, this book covers a variety of important NACA/NASA achievements. We recommend it highly for all students interested in aerospace history.

Forging the Future of Space Science National Research Council, Division on Engineering and Physical Sciences, Aeronautics and Space Engineering Board, Space Studies Board, 2010-03-08 From September 2007 to June 2008 the Space Studies Board conducted an international public seminar series, with each monthly talk highlighting a different topic in space and Earth science. The principal lectures from the series are compiled in Forging the Future of Space Science. The topics of these events covered the full spectrum of space and Earth science research, from global climate change, to the cosmic origins of life, to the exploration of the Moon and Mars, to the scientific research required to support human spaceflight. The prevailing messages throughout the seminar series as demonstrated by the lectures in this book are how much we have accomplished over the past 50 years, how profound are our discoveries, how much contributions from the space program affect our daily lives, and yet how much remains to be done. The age of discovery in space and Earth science is just beginning. Opportunities abound that will forever alter our destiny.

NASA's Journey to Mars: Pioneering Next Steps in Space Exploration National Aeronautics and Space Administration, 2016-02-05 This document communicates NASA's strategy and progress to learn about the Red Planet, to inform us more about our Earth's past and future, and may help answer whether life exists beyond our home planet. Together with NASA's partners in academia and commercial enterprises, NASA's vision is to pioneer Mars and answer some of humanity's fundamental questions: • Was Mars home to microbial life? Is it today? • Could it be a safe home for humans one day? • What can it teach us

about life elsewhere in the cosmos or how life began on Earth? • What can it teach us about Earth's past, present, and future?

First Man James R. Hansen, 2012-11-27 On July 20, 1969, the world stood still to watch American astronaut Neil A. Armstrong become the first person ever to step on the surface of another heavenly body. Upon his return to Earth, Armstrong was celebrated for his monumental achievement. He was also--as NASA historian Hansen reveals in this authorized biography--misunderstood. Armstrong's accomplishments as an engineer, a test pilot, and an astronaut have long been a matter of record, but Hansen's access to private documents and unpublished sources and his interviews with more than 125 subjects (including more than fifty hours with Armstrong himself) yield the first in-depth analysis of this elusive, reluctant hero.

Comm Check... Michael Cabbage, William Harwood, 2009-12-01 On February 1, 2003, the unthinkable happened. The space shuttle Columbia disintegrated 37 miles above Texas, seven brave astronauts were killed and America's space program, always an eyeblink from disaster, suffered its second catastrophic in-flight failure. Unlike the Challenger disaster 17 years earlier, Columbia's destruction left the nation one failure away from the potential abandonment of human space exploration. Media coverage in the immediate aftermath focused on the possible cause of the disaster, and on the nation's grief. But the full human story, and the shocking details of NASA's crucial mistakes, have never been told -- until now. Based on dozens of exclusive interviews, never-before-published documents and recordings of key meetings obtained by the authors, Comm Check takes the reader inside the conference rooms and offices where NASA's best and brightest managed the nation's multi-billion-dollar shuttle program -- and where they failed to recognize the signs of an impending disaster. It is the story of a space program pushed to the brink of failure by relentless political pressure, shrinking budgets and flawed decision making. The independent investigation into the disaster uncovered why Columbia broke apart in the sky above Texas. Comm Check brings that story to life with the human drama behind the tragedy. Michael Cabbage and William Harwood, two of America's most respected space journalists, are veterans of all but a handful of NASA's 113 shuttle missions. Tapping a network of sources and bringing a combined three decades of experience to bear, the authors provide a rare glimpse into NASA's inner circles, chronicling the agency's most devastating failure and the challenges that face NASA as it struggles to return America to space.

Dark Moon Mary Bennett, David S. Percy, 2001 As the dust settles on the 30th anniversary of Apollo 11, information is now coming to light that throws into serious doubt the authenticity of the Apollo record. New evidence clearly suggests that NASA hoaxed the photographs taken on the surface of the Moon. These disturbing findings are supported by detailed analysis of the Apollo images by professional photographer David S Percy ARPS and physicist David Groves PhD. The numerous inconsistencies clearly visible in the Apollo photographic account are quite irrefutable. Recent research indicates that the errors evidenced in DARK MOON were deliberately planted by individuals determined to leave clues to the faking in which they were unwillingly involved. DARK MOON is the answer to the question--did the Apollo missions really land a man on the Moon and return him alive and well to Earth, or is the record incorrect?

Truth, Lies, and O-Rings Allan J. McDonald, 2012-03-11 On a cold January morning in 1986, NASA launched the Space Shuttle Challenger, despite warnings against doing so by many individuals, including Allan McDonald. The fiery destruction of Challenger on live television moments after launch remains an indelible image in the nation's collective memory. In Truth, Lies, and O-Rings, McDonald, a skilled engineer and executive, relives the tragedy from where he stood at Launch Control Center. As he fought to draw attention to

the real reasons behind the disaster, he was the only one targeted for retribution by both NASA and his employer, Morton Thiokol, Inc., makers of the shuttle's solid rocket boosters. In this whistle-blowing yet rigorous and fair-minded book, McDonald, with the assistance of internationally distinguished aerospace historian James R. Hansen, addresses all of the factors that led to the accident, some of which were never included in NASA's Failure Team report submitted to the Presidential Commission. Truth, Lies, and O-Rings is the first look at the Challenger tragedy and its aftermath from someone who was on the inside, recognized the potential disaster, and tried to prevent it. It also addresses the early warnings of very severe debris issues from the first two post-Challenger flights, which ultimately resulted in the loss of Columbia some fifteen years later.

Quieting the Boom Lawrence R. Benson, 2013

Riding Rockets Mike Mullane, 2007-02-06 Selected as a Mission Specialist in 1978 in the first group of shuttle astronauts, Mike Mullane completed three missions and logged 356 hours aboard the Discovery and Atlantis shuttles. It was a dream come true. As a boy, Mullane could only read about space travel in science fiction, but the launch of Sputnik changed all that. Space flight became a possible dream and Mike Mullane set out to make it come true. In this absorbing memoir, Mullane gives the first-ever look into the often hilarious, sometime volatile dynamics of space shuttle astronauts - a class that included Vietnam War veterans, feminists, and propeller-headed scientists. With unprecedented candour, Mullane describes the chilling fear and unparalleled joy of space flight. As his career centred around the Challenger disaster, Mullane also recounts the heartache of burying his friends and colleagues. And he pulls no punches as he reveals the ins and outs of NASA, frank in his criticisms of the agency. A blast from start to finish, *Riding Rockets* is a straight-from-the-gut account of what it means to be an astronaut, just in time for this latest generation of stargazers.

Determination of Azimuth Angle at Burnout for Placing a Satellite Over a Selected Earth Position T. H. Skopinski, Katherine G. Johnson, 1960

The Last Man on the Moon Eugene Cernan, Don Davis, 2007-04-01 The basis of the 2014 award-winning feature-length documentary! A revealing and dramatic look at the inside of the American Space Program from one of its pioneers. Eugene Cernan was a unique American who came of age as an astronaut during the most exciting and dangerous decade of spaceflight. His career spanned the entire Gemini and Apollo programs, from being the first person to spacewalk all the way around our world to the moment when he left man's last footprint on the Moon as commander of Apollo 17. Between those two historic events lay more adventures than an ordinary person could imagine as Cernan repeatedly put his life, his family and everything he held dear on the altar of an obsessive desire. Written with New York Times bestselling author Don Davis, *The Last Man on the Moon* is the astronaut story never before told - about the fear, love and sacrifice demanded of the few men who dared to reach beyond the heavens for the biggest prize of all - the Moon.

Von Braun Michael Neufeld, 2017-04-12 Curator and space historian at the Smithsonian's National Air and Space Museum delivers a brilliantly nuanced biography of controversial space pioneer Wernher von Braun. Chief rocket engineer of the Third Reich and one of the fathers of the U.S. space program, Wernher von Braun is a source of consistent fascination. Glorified as a visionary and vilified as a war criminal, he was a man of profound moral complexities, whose intelligence and charisma were coupled with an enormous and, some would say, blinding ambition. Based on new sources, Neufeld's biography delivers a meticulously researched and authoritative portrait of the creator of the V-2 rocket and his times, detailing how he was a man caught between morality and progress, between his dreams of the heavens and the earthbound realities of his life.

Molly on the Moon Mary Robinette Kowal, 2022-04-12 Award-winning science fiction author Mary Robinette Kowal consulted with a NASA astronaut to craft

her first picture book story, accurately describing how living on the moon differs from life on Earth. Beautifully illustrated by Diana Mayo, *Molly on the Moon* is the tale of two siblings adjusting to their new home. When Molly and her family move to the moon, they can only pack the essentials—just one toy each for Molly and her baby brother, Luke. Luckily, Molly has a big imagination. A packing crate becomes a fort, a tarp becomes a witch's cape, and some cans become a tea set. Baby Luke, on the other hand . . . has blocks. Molly doesn't want to share. At first. But then she realizes that when you're on the moon—or anywhere else—a big imagination and being with someone you love can be infinitely better than all the toys in the universe. Inspiring and imaginative, *Molly on the Moon* also includes fascinating facts about the moon's environment, revealing how the differences in gravity, temperature, and time would affect our lives.
