The Photo Ark Joel Sartore, 2017 This book of photography represents National Geographic's Photo Ark, a major cross-platform initiative and lifelong project by photographer Joel Sartore to make portraits of the world's animals -- especially those that are endangered. His message: to know these animals is to save them. Sartore intends to photograph every animal in captivity in the world. He is circling the globe, visiting zoos and wildlife rescue centers to create studio portraits of 12,000 species, with an emphasis on those facing extinction. He has photographed more than 6,000 already and now, thanks to a multi-year partnership with National Geographic, he may reach his goal. This book showcases his animal portraits: from tiny to mammoth, from the Florida grasshopper sparrow to the greater one-horned rhinoceros. Paired with the prose of veteran wildlife writer Douglas Chadwick, this book presents an argument for saving all the species of our planet.

Dictionary of the British English Spelling System Greg Brooks, 2015-03-30 This book will tell all you need to know about British English spelling. It's a reference work intended for anyone interested in the English language, especially those who teach it, whatever the age or mother tongue of their students. It will be particularly useful to those wishing to produce well-designed materials for teaching initial literacy via phonics, for teaching English as a foreign or second language, and for teacher training. English spelling is notoriously

complicated and difficult to learn; it is correctly described as much less regular and predictable than any other alphabetic orthography. However, there is more regularity in the English spelling system than is generally appreciated. This book provides, for the first time, a thorough account of the whole complex system. It does so by describing how phonemes relate to graphemes and vice versa. It enables searches for particular words, so that one can easily find, not the meanings or pronunciations of words, but the other words with which those with unusual phoneme-grapheme/grapheme-phoneme correspondences keep company. Other unique features of this book include teacher-friendly lists of correspondences and various regularities not described by previous authorities, for example the strong tendency for the letter-name vowel phonemes (the names of the letters) to be spelt with those single letters in non-final syllables.

Far from the Factory George Gonzalez-Rivas, Linus Larsson, 2017-11-15 If you currently employ knowledge workers who do most of their work on computers or with computers, access the Internet, utilize internal and external databases, use e-mail or other new messaging technology, then this book is for you. Quite simply, this handbook is for any organization with a lot of Web DNA that wishes to cut costs, improve perform

Database Internals Alex Petrov, 2019-09-13 When it comes to choosing, using, and maintaining a database, understanding its internals is essential. But with so many distributed databases and tools available today, it's often difficult to

understand what each one offers and how they differ. With this practical guide, Alex Petrov guides developers through the concepts behind modern database and storage engine internals. Throughout the book, you'll explore relevant material gleaned from numerous books, papers, blog posts, and the source code of several open source databases. These resources are listed at the end of parts one and two. You'll discover that the most significant distinctions among many modern databases reside in subsystems that determine how storage is organized and how data is distributed. This book examines: Storage engines: Explore storage classification and taxonomy, and dive into B-Tree-based and immutable Log Structured storage engines, with differences and use-cases for each Storage building blocks: Learn how database files are organized to build efficient storage, using auxiliary data structures such as Page Cache, Buffer Pool and Write-Ahead Log Distributed systems: Learn step-by-step how nodes and processes connect and build complex communication patterns Database clusters: Which consistency models are commonly used by modern databases and how distributed storage systems achieve consistency

Current Ornithology Volume 17 Charles F. Thompson, 2010-09-09 Current Ornithology publishes authoritative, up-to-date, scholarly reviews of topics selected from the full range of current research in avian biology. Topics cover the spectrum from the molecular level of organization to population biology and community ecology. The series seeks especially to review (1) fields in

which an abundant recent literature will benefit from synthesis and organization, or (2) newly emerging fields that are gaining recognition as the result of recent discoveries or shifts in perspective, or (3) fields in which students of vertebrates may benefit from comparisons of birds with other classes. All chapters are invited, and authors are chosen for their leadership in the subjects under review.

Ecology and Conservation of Forest Birds Grzegorz Mikusiński, Jean-Michel Roberge, Robert J. Fuller, 2018-03-29 Ecology and Conservation of Forest Birds is a unique review of current understanding of the relationships between forest birds and their changing environments. Large ecological changes are being driven by forest management, climate change, introduced pests and pathogens, abiotic disturbances, and overbrowsing. Many forest bird species have suffered population declines, with the situation being particularly severe for birds dependent on attributes such as dead wood, old trees and structurally complex forests. With a focus on the non-tropical parts of the Northern Hemisphere, the text addresses the

fundamental evolutionary and ecological aspects of forest birds using original data analyses and synthesising reviews. The characteristics of bird assemblages and their habitats in different European forest types are explored, together with the macroecological patterns of bird diversity and conservation issues. The book provides a valuable reference for ecologists, ornithologists, conservation professionals, forest industry employees, and those interested in birds and nature.

Lean Manufacturing and Six Sigma Fausto Pedro García Márquez, Isaac Segovia, Tamás Bányai, Péter Tamás, 2020-02-14
Lean Manufacturing, also called lean production, was originally created in Toyota after the Second World War, in the reconstruction period. It is based on the idea of eliminating any waste in the industry, i.e. any activity or task that does not add value and requires resources. It is considered in every level of the industry, e.g. design, manufacturing, distribution, and customer service. The main wastes are: over-production against plan; waiting time of operators and machines; unnecessary transportation; waste in the process itself; excess stock of material and components; non value-adding motion; defects in quality. The diversity of these issues will be covered from algorithms, mathematical models, and software engineering by design methodologies and technical or practical solutions. This book

intends to provide the reader with a comprehensive overview of the current state, cases studies, hardware and software solutions, analytics, and data science in dependability engineering.

Conservation Monitoring in Freshwater Habitats Clive Hurford,Michael Schneider,Ian Cowx,2009-12-09 As in the terrestrial environment, most data collection from freshwater habitats to date falls into the survey, surveillance or research categories. The critical difference between these exercises and a monitoring project is that a monitoring project will clearly identify when we need to make a management response. A Model for Conservation Management and Monitoring Monitoring (as defined by Hellawell) is essentially a tool of practical conservation management, and Fig. 1.1 shows a simple, but effective, model for nature conservation management and monitoring. The need for clear decision-making is implicit in this model. First we must decide what would represent a favourable

state for the key habitat or species, and then we must decide when to intervene if the state is (or becomes) unfavourable. A third, often overlooked, but equally important, decision concerns when we would consider the habitat or species to have recovered; this is unlikely to be the same point that we became concerned about it. This decision not only has resource implications, it can also have major implications for other habitats and species (prey species are an obvious example). All of these decisions are essential to the development of an efficient and effective monitoring project.

Mismeasuring Our Lives Jean-Paul Fitoussi, Joseph E. Stiglitz, Amartya Kumar Sen, 2011-04-22 In February of 2008, amid the looming global financial crisis, President Nicolas Sarkozy of France asked Nobel Prize-winning economists Joseph Stiglitz and Amartya Sen, along with the distinguished French economist Jean Paul Fitoussi, to establish a commission of leading economists to study whether Gross Domestic Product (GDP) - the most widely used measure of economic activity - is a reliable indicator of economic and social progress. The Commission was given the further task of laying out an agenda for developing better measures. *Mismeasuring Our Lives* is the result of this major intellectual effort, one with pressing relevance for anyone engaged in assessing how and whether our economy is serving the needs of our society. The authors offer a sweeping assessment of the limits of GDP as a measurement of the well-being of societies - considering, for example, how GDP overlooks economic inequality (with the result

that most people can be worse off even though average income is increasing); and does not factor environmental impacts into economic decisions. In place of GDP, *Mismeasuring Our Lives* introduces a bold new array of concepts, from sustainable measures of economic welfare, to measures of savings and wealth, to a 'green GDP.' At a time when policymakers worldwide are grappling with unprecedented global financial and environmental issues, here is an essential guide to measuring the things that matter.

Towards Cohesion Policy 4.0 John Bachtler, Joaquim Oliveira Martins, Peter Wostner, Piotr Zuber, 2019-11-06 In the context of the debate on the future of Europe, this book makes the case for a new approach to structural transformation, growth and cohesion in the EU. It explores both the opportunities and challenges from globalisation and technological change, the widening differences in productivity between leading and lagging regions, and the need for a new policy framework capable of delivering inclusive growth. The Regional Studies Association's Policy Impact Books form a series of punchy, policy facing books addressing issues of contemporary concern. There is a consistent focus on the impact of policy research both in terms of its reach to policy, academic and practitioner communities and also in its significance, to show how evidence can inform policy change within regional and urban studies.

The Mining Valuation Handbook 4e Victor Rudenno, 2019-09-10 An essential, in-depth guide to mining investment analysis Written by a mining investment expert, The Mining Valuation Handbook: Mining and Energy Valuation for Investors and Management is a useful resource. It's designed to be utilized by executives, investors, and financial and mining analysts. The book guides those who need to assess the value and investment potential of mining opportunities. The fourth edition text has been fully updated in its coverage of a broad scope of topics, such as feasibility studies, commodity values, indicative capital and operating costs, valuation and pricing techniques, and exploration and expansion effects.

Mentalization-Based Treatment for Children: A Time-Limited Approach Nick Midgley, Karin Ensink, Karin Lindqvist, Norka Malberg, Nicole Muller, 2022-12-15 New in paperback. This book is the first comprehensive clinical introduction to using Mentalization-based treatment (MBT) with children, 5-12 years old.

Trends in Ornithology Research Pedro K. Ulrich, Julien H. Willett, 2010 Birds are a commonly acknowledged indicator of biodiversity. This book presents an indigenous perspective on the effects of traditional activities on birds. Moreover, birds are among the main components for plant reproduction in tropical ecosystems, hummingbirds being the most important vertebrate pollinators in the Neotropics. This book puts together different approaches and perspectives to study bird-flower interaction networks, reinforcing the idea of

communities displaying high connectedness. In addition, data on the number of occupied territories and breeding frequency (active nests) of nine species of vole-eating birds of prey in Finland are examined, using generalised linear models. It was expected that the effects of global warming on various vole-eating birds of prey at high latitudes were both positive and negative, in particular due to mild winters. Thus, because temperature affects the distribution limits of many organisms, global warming may provoke an advance of distribution ranges polewards. The authors also discuss whether European birds have advanced their distribution ranges mainly northwards in response to climatic warming. Furthermore, fossil footprints provide important evidence regarding the morphology, behaviour, distribution, and ecology of ancient animals. For the first time, the entire avian track record is reviewed, including its specialised ichnotaxonomy, from the Mesozoic through the Holocene. How the evidence impacts the understanding of avian evolution and ecology is discussed as well.
