Uses of Technology in Primary and Secondary Mathematics Education Lynda Ball,Paul Drijvers,Silke Ladel,Hans-Stefan Siller,Michal Tabach,Colleen Vale,2018-05-14 This book provides international perspectives on the use of digital technologies in primary, lower secondary and upper secondary school mathematics. It gathers contributions by the members of three topic study groups from the 13th International Congress on Mathematical Education and covers a range of themes that will appeal to researchers and practitioners alike. The chapters include studies on technologies such as virtual manipulatives, apps, custom-built assessment tools, dynamic geometry, computer algebra systems and communication tools. Chiefly focusing on teaching and learning mathematics, the book also includes two chapters that address the evidence for technologies' effects on school mathematics. The diverse technologies considered provide a broad overview of the potential that digital solutions hold in connection with teaching and learning. The chapters provide both a snapshot of the status quo of technologies in school mathematics, and outline how they might impact school mathematics ten to twenty years from now.

Angela Vasquez is a young single mother training to be a nurse. Norman Ketterly is fighting for his life in a cancer ward. Their intertwining stories unspool under a canopy of stars too vast to imagine and too beautiful to comprehend, especially when the travails of life on Earth threaten to blot it out. Kenneth Lonergan's play The Starry Messenger is a bittersweet exploration of love, hope and the mysteries of the cosmos. It premiered in New York in 2009, and received its UK premiere at Wyndham's Theatre, London, in May 2019, featuring Matthew Broderick and Elizabeth McGovern.

Copy, Copy, Copy Mark Earls,2015-05-26 THE #1 HACK FOR SMARTER MARKETING We all want new answers and new solutions for the very real and pressing challenges that our organizations face. New things to point to and talk about, new ways of working and new ways of thinking that might just be better than the old ways. But rather than this endless search for a brilliant and novel solution, why don't you just copy something that's worked before? Mark Earls, leading expert in marketing and consumer behaviour, quashes the stigma around copying, and shows that it can help us to rethink how we go about solving problems. By understanding what other people are doing and the choices they make, we can develop strategies to solve the challenges that we face inside and outside the organization. Based on extensive research and proven examples, Copy, Copy, Copy provides over 50 strategies that you can use right away to copy, borrow or steal as the basis for better ideas - faster. If it's good enough for Elvis, Newton, Shakespeare, The British Olympic Cycling Team and Great Ormond Street Hospital, isn't it good enough for you? 'This delightful book argues convincingly that transferring ideas usually produces greater value than cooking them up from scratch. And then shows you how.' - Rory Sutherland, Vice Chairman, Ogilvy London and the Spectator Magazine's Wikiman 'Yet another entertaining handbook from the acclaimed Herdmeister for anyone involved in marketing, behavioural change and understanding why we all make the choices we make. Earls convincingly disrupts convention about what is innovation - though praxis. This is jammed with great case studies and 52 actionable strategies.' - Stephen Maher, Chairman, The Marketing Society and CEO, MBA 'Yet again this leading British business thinker has got us to see the world we inhabit today in fresh and mind-altering ways. A book which marries theory and practice better than the vast majority out there. Most of all his message of copying one's way to greatness is entertaining, counter-intuitive and fun.' - David Abraham, CEO Channel 4 PLC

Figuring Space Gilles Châtelet,2010-12-15 In Figuring Space Gilles Châtelet seeks to capture the problem of intuition of mobility in philosophy, mathematics and physics. This he does by means of virtuality and intensive quantities (Oresme, Leibniz), wave-particle duality and perspective diagrams, philosophy of nature and Argand's and Grassman's geometric discoveries and, finally, Faraday's, Maxwell's and Hamilton's electrophilosophy. This tumultuous relationship between mathematics,

physics and philosophy is presented in terms of a comparison between intuitive practices and Discursive practices. The following concepts are treated in detail: The concept of virtuality; thought experiments; diagrams; special relativity; German Naturphilosophie and `Romantic' science. Readership: The book does not require any considerable mathematical background, but it does insist that the reader quit the common instrumental conception of language. It will interest professional philosophers, mathematicians, physicists, and even younger scientists eager to understand the `unreasonable effectiveness of mathematics'.
