The Uninhabitable Earth David Wallace-Wells, 2019-02-19 #1 NEW YORK TIMES BESTSELLER • “The Uninhabitable Earth hits you like a comet, with an overflow of insanely lyrical prose about our pending Armageddon.”—Andrew Solomon, author of *The Noonday Demon* NAMED ONE OF THE BEST BOOKS OF THE YEAR BY *The New Yorker* • *The New York Times Book Review* • *Time* • *NPR* • *The Economist* • *The Paris Review* • *Toronto Star* • *GQ* • *The Times Literary Supplement* • *The New York Public Library* • *Kirkus Reviews* It is worse, much worse, than you think. If your anxiety about global warming is dominated by fears of sea-level rise, you are barely scratching the surface of what terrors are possible—food shortages, refugee emergencies, climate wars and economic devastation. An “epoch-defining book” (*The Guardian*) and “this generation’s *Silent Spring*” (*The Washington Post*), *The Uninhabitable Earth* is both a travelogue of the near future and a meditation on how that future will look to those living through it—the ways that warming promises to transform global politics, the meaning of technology and nature in the modern world, the sustainability of capitalism and the trajectory of human progress. *The Uninhabitable Earth* is also an impassioned call to action. For just as the world was brought to the brink of catastrophe within the span of a lifetime, the responsibility to avoid it now belongs to a single generation—today’s. LONGLISTED FOR THE PEN/E.O. WILSON LITERARY SCIENCE WRITING AWARD “The Uninhabitable Earth is the most terrifying book I have ever read. Its subject is climate change, and its method is scientific, but its mode is Old Testament. The book is a meticulously documented, white-knuckled tour through the cascading catastrophes that will soon engulf our warming planet.”—Farhad Manjoo, *The New York Times* “Riveting. . . . Some readers will find Mr. Wallace-Wells’s outline of possible futures alarmist. He is indeed alarmed. You should be, too.”—*The Economist* “Potent and evocative. . . . Wallace-Wells has resolved to offer something other than the standard narrative of climate change. . . . He avoids the ‘eerily banal language of climatology’ in favor of lush, rolling prose.”—Jennifer Szalai, *The New York Times* “The book has potential to be this generation’s *Silent Spring*.”—*The Washington Post* “The Uninhabitable Earth, which has become a best seller, taps into the underlying emotion of the day: fear. . . . I encourage people to read this book.”—Alan Weisman, *The New York Review of Books*

The Transfer of Knowledge through Art and Visualization Anna Ursyn, 2023-12-06 This book offers strategies for the transfer of knowledge through combining information technology and visual arts, and examining how to visually enhance and convey knowledge. Specifically, it presents a fresh look at how technology-based, science-inspired projects can be innovatively delivered through artistic methods. It explores a selection of inventions gained through the collaboration of internationalist professionals in various fields of knowledge, before outlining a new approach in how knowledge can be delivered using the inventions in a novel, visual way through action-based visual storytelling, video, graphical display, and visualization. Crucially, it looks at how current media and techniques used for presenting topics in industries, corporations, commerce and marketing companies could be successfully translated and developed as a presentation skill in the school, college, or university environment. It thus seeks to

address the skills that prospective employers expect from students, in terms of possessing the ability to create visual presentations of data, solutions, and products. With a sharp focus on the current generation schools, academies, business and marketing companies, and catering to the modern demand for novelty in presentation, it makes a strong contribution to the conversation around professional collaboration, visual communication, knowledge transfer, novel technologies, and knowledge visualization.

The Social Conquest of Earth Edward O. Wilson, 2012-04-09 New York Times Bestseller and Notable Book of the Year A Kirkus Reviews Book of the Year (Nonfiction) Longlisted for the Andrew Carnegie Medal for Excellence (Nonfiction) From the most celebrated heir to Darwin comes a groundbreaking book on evolution, the summa work of Edward O. Wilson's legendary career. Sparking vigorous debate in the sciences, *The Social Conquest of Earth* upends "the famous theory that evolution naturally encourages creatures to put family first" (Discover). Refashioning the story of human evolution, Wilson draws on his remarkable knowledge of biology and social behavior to demonstrate that group selection, not kin selection, is the premier driving force of human evolution. In a work that James D. Watson calls "a monumental exploration of the biological origins of the human condition," Wilson explains how our innate drive to belong to a group is both a "great blessing and a terrible curse" (Smithsonian). Demonstrating that the sources of morality, religion, and the creative arts are fundamentally biological in nature, the renowned Harvard University biologist presents us with the clearest explanation ever produced as to the origin of the human condition and why it resulted in our domination of the Earth's biosphere.

Seeing Like a Rover Janet Vertesi, 2015-04-22 *Seeing Like a Rover* brings the Mars Exploration Rover mission to vivid life through the author's years of immersion with the team during routine operations on Mars. In the book, Janet Vertesi explores the social and technical achievements of making knowledge about Mars based on iterative digital representations of its surface. We see how scientists on the Rover mission both perform the digital transformations that bring new features in their images to light, enabling discovery, as well as how they collectively interpret images to determine where the Rovers are located on Mars and what they should do next. Using her close study of digital imaging, which exhibits a sensitivity to the social context of scientific work, Vertesi discusses how representation on the mission is never about finding a single way of truthfully representing Mars. Representation is instead, she argues, a question of using image processing techniques strategically to reveal and conceal different features of the planet's surface, and of bringing these multiple representations together to make both knowledge and collective decisions about exploration on the Red Planet. *Seeing Like a Rover* speaks to many themes that are familiar to historians, sociologists, and philosophers of science. Issues such as trust among knowledge-making teams, the different epistemic status and practices of the lab and the field, and the heritage of visual languages in an emerging discipline are just as relevant in other periods and places. Moreover, by revealing how representational practices craft social visions, Vertesi develops a framework that can be applied to scientific imaging across a variety of time periods and scientific contexts.
