In the Name of Glory Tom Rubython,2011-10-31 A detailed examination of the battle for the Formula 1 Championship in 1976 between James Hunt and Niki Lauda -- Publisher description.

PC Hacks Jim Aspinwall,2005 Presents information on getting the most out of a PC's hardware and software, covering such topics as upgrading the BIOS, configuring the hard drive, installing more RAM, improving CPU performance, and adding COM ports.

Design and Operation of Heat Exchangers and their Networks Wilfried Roetzel,Xing Luo,Dezhen Chen,2019-10-04 Design and Operation of heat Exchangers and Their Networks presents a comprehensive and detailed analysis on the thermal design methods for the most common types of heat exchangers, with a focus on their networks, simulation procedures for their operations, and measurement of their thermal performances. The book addresses the fundamental theories and principles of heat transfer performance of heat exchangers and their applications and then applies them to the use of modern computing technology. Topics discussed include cell methods for condensers and evaporators, dispersion models for heat exchangers, experimental methods for the evaluation of heat exchanger performance, and thermal

calculation algorithms for multi-stream heat exchangers and heat exchanger networks. Includes MATLAB codes to illustrate how the technologies and methods discussed can be easily applied and developed. Analyses a range of different models, applications, and case studies in order to reveal more advanced solutions for industrial applications. Maintains a strong focus on the fundamental theories and principles of the heat transfer performance of heat exchangers and their applications for complex flow arrangement.

Formula 1: the Turbo Era Alan Henry, 1998 Explosively fast and notoriously difficult to drive, turbocharged cars blew onto the Formula 1 circuit in 1977; by the mid-1980s, they had evolved into the most powerful cars in the sport's history. This in-depth examination of F1's turbocharged era -- 1977 to 1988 -- traces the birth, development, and ultimate demise of the breed. Largely pictorial with explanatory captions, the book utilizes spectacular color photography to guide the reader through the engineering that enabled such phenomenal performance. Action shots demonstrate the principles of the turbocharged F1 car, presenting the technology in a package that's understandable and invaluable to any F1 enthusiast.

Motorsport Going Global N. Henry, T. Angus, M. Jenkins, C.

Aylett,2007-07-31 This book provides the definitive economic study of the global motorsport industry. Drawing on a decade of research, and interviews with top industry executives and international commentators, the global grid of motorsport is analyzed and the world's national motorsport industries benchmarked. Motorsport Going Global concludes on scenarios for the global industry as it enters a new era of market growth and global opportunity.

The Business of Speed David N. Lucsko,2008-11-03 2009 Outstanding Academic Title, Choice Since the mass production of Henry Ford's Model T, car enthusiasts have been redesigning, rebuilding, and reengineering their vehicles for increased speed and technical efficiency. They purchase aftermarket parts, reconstruct engines, and enhance body designs, all in an effort to personalize and improve their vehicles. Why do these car enthusiasts modify their cars and where do they get their aftermarket parts? Here, David N. Lucsko provides the first scholarly history of America's hot rod business. Lucsko examines the evolution of performance tuning through the lens of the \$34-billion speed equipment industry that supports it. As early as 1910, dozens of small shops across the United States designed,

manufactured, and sold add-on parts to consumers eager to employ new technologies as they tinkered with their cars.

Operating for much of the twentieth century in the shadow of the Big Three automobile manufacturers—General Motors, Ford, and Chrysler—these businesses grew at an impressive rate, supplying young and old hot rodders with thousands of performance-boosting gadgets. Lucsko offers a rich and heretofore untold account of the culture and technology of the high-performance automotive aftermarket in the United States, offering a fresh perspective on the history of the automobile in America.

Real NASCAR Daniel S. Pierce, 2010-04-01 In this history of the stock car racing circuit known as NASCAR, Daniel S. Pierce offers a revealing new look at the sport from its postwar beginnings on Daytona Beach and Piedmont dirt tracks through the early 1970s, when the sport spread beyond its southern roots and gained national recognition. *Real NASCAR* not only confirms the popular notion of NASCAR's origins in bootlegging, but also establishes beyond a doubt the close ties between organized racing and the illegal liquor industry, a story that readers will find both fascinating and controversial.

Driving Europe Frank Schipper, 2008 Today we can hardly imagine life in Europe without roads and the automobiles that move people and goods around. In fact, the vast majority of movement in Europe takes place on the road. Travelers use the car to explore parts of the continent on their holidays, and goods travel large distances to reach consumers. Indeed, the twentieth century has deservedly been characterized as the century of the car. The situation looked very different around 1900. People crossing national borders by car encountered multiple hurdles on their way. Technically, they imported their vehicle into a neighboring country and had to pay astronomical import duties. Often they needed to pass a driving test in each country they visited. Early on, automobile and touring clubs sought to make life easier for traveling motorists. International negotiations tackled the problems arising from differing regulations. The resulting volume describes everything from the standardized traffic signs that saved human lives on the road to the Europabus taking tourists from Stockholm to Rome in the 1950s. *Driving Europe* offers a highly original portrait of a Europe built on roads in the course of the twentieth century.

The World Beyond the Windshield Christof Mauch, Thomas Zeller, 2008 For better or worse, the view through a car's windshield

has redefined how we see the world around us. In some cases, such as the American parkway, the view from the road was the be-all and end-all of the highway; in others, such as the Italian autostrada, the view of a fast, efficient transportation machine celebrating either Fascism or its absence was the goal. These varied environments are neither necessary nor accidental but the outcomes of historical negotiations, and whether we abhor them or take delight in them, they have become part of the fabric of human existence. *The World beyond the Windshield: Roads and Landscapes in the United States and Europe* is the first systematic, comparative look at these landscapes. By looking at examples from the United States and Europe, the chapters in this volume explore the relationship between the road and the landscape that it traverses, cuts through, defines, despoils, and enhances. The authors analyze the Washington Beltway and the Blue Ridge Parkway, as well as iconic roads in Italy, Nazi Germany, East Germany, and Great Britain. This is a story of the transatlantic exchange of ideas about environment and technology and of the national and nationalistic appropriations of such landscaping.

Cars and Culture Rudi Volti, 2006-03-10 A succinct yet comprehensive history, *Cars and Culture* highlights the technical

changes that altered the appearance and performance of automobiles, along with the myriad forces that have shaped the car's development.

Vehicle of Influence Roland Francis Stephen, 2009-12-21 This study examines a crucial period in European integration, ending in the early 1990s, when significant progress was made towards the dream of a unified European market. It shows how European automakers were part of these changes and how their influence within the institutions of the European Union (EU) yielded a wide range of policy compromises governing a single European car market. The book begins by reviewing the history of the EU and the logic of regional free trade, and goes on to develop a political explanation for the kinds of changes that actually occurred. The author argues that European automakers enjoyed a privileged place in the political arena, albeit one much transformed by the new institutions of the EU. Therefore, these firms often significantly influenced regional policy outcomes. The argument is applied to policymaking in the important areas of environmental regulation, trade, subsidies, and anti-trust regulation. This work lies at the intersection of business, economics, and political science and is of interest to both experts and non-specialists with an interest in the

tremendous economic and political changes brought about by the creation of a united Europe and, more generally, by the worldwide process of regional economic integration. Academics, professionals, businessmen, and leaders in government all have something to learn from the way in which firms and governments combined to build the largest car market in the world. Roland Stephen is Assistant Professor in the Department of Political Science, North Carolina State University.

The Illusory Boundary Martin Reuss, Stephen H.

Cutcliffe, 2010-08-06 This compelling new book challenges the view that a clear and unwavering boundary exists between nature and technology. Rejecting this dichotomy, the contributors show how the history of each can be united in a constantly shifting panorama where definitions of nature and technology alter and overlap.

Environmental Histories of the Cold War J. R. McNeill, Corinna

R. Unger, German Historical Institute (Washington, D.C.), 2010-04-30 Explores the links between the Cold War and the global environment, ranging from the environmental impacts of nuclear weapons to the political repercussions of environmentalism.

The Automobile Age James J. Flink, 1990-07-19 In this

sweeping cultural history, James Flink provides a fascinating

account of the creation of the world's first automobile culture. He offers both a critical survey of the development of automotive technology and the automotive industry and an analysis of the social effects of automobility on workers and consumers.

American Hegemony and the Postwar Reconstruction of Science in Europe John Krige, 2008-08-29 In 1945, the United States was not only the strongest economic and military power in the world; it was also the world's leader in science and technology. In *American Hegemony and the Postwar Reconstruction of Science in Europe*, John Krige describes the efforts of influential figures in the United States to model postwar scientific practices and institutions in Western Europe on those in America. They mobilized political and financial support to promote not just America's scientific and technological agendas in Western Europe but its Cold War political and ideological agendas as well. Drawing on the work of diplomatic and cultural historians, Krige argues that this attempt at scientific dominance by the United States can be seen as a form of consensual hegemony, involving the collaboration of influential local elites who shared American values. He uses this notion to analyze a series of case studies that describe how the U.S. administration, senior officers in the Rockefeller and Ford

Foundations, the NATO Science Committee, and influential members of the scientific establishment—notably Isidor I. Rabi of Columbia University and Vannevar Bush of MIT—tried to Americanize scientific practices in such fields as physics, molecular biology, and operations research. He details U.S. support for institutions including CERN, the Niels Bohr Institute, the French CNRS and its laboratories at Gif near Paris, and the never-established European MIT. Krige's study shows how consensual hegemony in science not only served the interests of postwar European reconstruction but became another way of maintaining American leadership and making the world safe for democracy.

Fordism Transformed Haruhito Shiomi, Kazuo Wada, 1995 . Topical . Written by leading Japanese, American, and European scholars . Based on proceedings of prestigious international conference Japan is now the world's largest producer of cars but it only began to catch up with its competitors after World War II by studying and modifying the Ford system of mass production implemented first in the USA in the early part of the century. Other countries have also developed the system in their own ways with varying degrees of success. The papers in this volume will examine and compare the experiences of different countries in

modifying the Ford system, and the impact of the quality control movement' and lean production in Japan.

The European Automobile Industry James Michael Laux,1992

Laux carefully examines how European factory owners emulated American success in production and sales between the wars, how the postwar market boom chipped away at American dominance of the industry, and how Japanese models in turn began to cut into the world market in the competitive 1980s. In this incisive overview, Laux determines that Europe's most successful automaking firms were generally those which identified a market and offered this market a product at a reasonable price.

Drive On! L. J. K. Setright,2003 One of the most stimulating, informative, provocative and witty books on the motor car ever written.

Getting and Spending Susan Strasser,Charles

McGovern,Matthias Judt,1998-11-13 The developing history of consumption is not so much a separate field, as a prism through which many aspects of social and political life may be viewed. The essays in this collection represent a variety of approaches in Europe and America; yet their commonalities suggest recent directions in the scholarship, raising such themes as consumption

and democracy, the development of a global economy, the role of the state, the centrality of consumption to Cold War politics, the importance of the Second World War as a historical divide, the language of consumption, the contexts of locality, race, ethnicity, gender, and class, and the environmental consequences of twentieth-century consumer society. Implicitly, and sometimes explicitly, they explore the role of the historian as social, political, and moral critic. The essays discuss products, corporate strategies, government policies, and ideas about consumption. Unlike other studies of twentieth-century consumption, this book provides international comparisons.
