Web Page Recommendation Models Sule Gunduz-Oguducu, 2022-06-01 One of the application areas of data mining is the World Wide Web (WWW or Web), which serves as a huge, widely distributed, global information service for every kind of information such as news, advertisements, consumer information, financial management, education, government, e-commerce, health services, and many other information services. The Web also contains a rich and dynamic collection of hyperlink information, Web page access and usage information, providing sources for data mining. The amount of information on the Web is growing rapidly, as well as the number of Web sites and Web pages per Web site. Consequently, it has become more difficult to find relevant and useful information for Web users. Web usage mining is concerned with guiding the Web users to discover useful knowledge and supporting them for decision-making. In that context, predicting the needs of a Web user as she visits Web sites has gained importance. The requirement for predicting user needs in order to guide the user in a Web site and improve the usability of the Web site can be addressed by recommending pages to the user that are related to the interest of the user at that time. This monograph gives an overview of the research in the area of discovering and modeling the

users' interest in order to recommend related Web pages. The Web page recommender systems studied in this monograph are categorized according to the data mining algorithms they use for recommendation. New Trends in Disruptive Technologies, Tech Ethics and Artificial Intelligence Daniel H. de la Iglesia, Juan F. de Paz Santana, Alfonso J. López Rivero, 2022-08-27 This book provides a forum for experts to present their latest research in disruptive technologies, promoting knowledge transfer. Due to the important advances in technologies such as artificial intelligence, big data, the Internet of things, or bioinformatics produced in recent years, it is necessary to conduct a thorough review of current ethical patterns. One of the research fields that is in full expansion and with a broad future is technology ethics or tech ethics. Just a few years ago, this type of research was a small part, and they did not have too many technology researchers involved. At present, due to the explosion of new applications of artificial intelligence, their problems and their legal barriers have flourished innumerable initiatives, declarations, principles, guides, and analyses focused on measuring the social impact of these systems and on the development of a more ethical technology. It is, therefore, a problem that needs to be addressed from an academic and multidisciplinary point of view, where experts in ethics and behavior work together with experts in new and disruptive technologies. The international conference "Disruptive Technologies Tech Ethics and Artificial Intelligence" (DITTET 2022) provides a forum to present and discuss the latest scientific and technical advances and their implications in the field of ethics. It provides a unique opportunity to bring together experts in different fields, academics, and professionals to exchange their experience in the development and deployment of disruptive technologies, artificial intelligence, and their ethical problems.

Books IV-VI Ludger Hovestadt, 2022-12-31 Abhandlung zur digitalen Architektur Hovestadts Traktat folgt strikt den Linien der bekannten Abhandlungen von Vitruv und Alberti, in der Annahme, dass wir uns heute wieder in einer ähnlichen Konstellation befinden. Vitruv und Alberti brachten zum Ausdruck, was Architektur in ihrer Epoche bedeutete: die römische Antike und die Renaissance. Hovestadt formuliert sie nun in den heutigen Begriffen der Physik, Mathematik, Technologie, Literatur und Philosophie neu. Die Bücher I bis III befassen sich mit der Rolle des Architekten und der Objektivität der Architektur. Die Bücher IV bis VI thematisieren die Modalitäten des Sprechens und der Kodierung von Architektur: das Geheime, das Öffentliche und das Private. Die Bücher VII bis X widmen sich den eigentlichen digitalen Mechanismen: künstlicher Intelligenz, natürlicher Kommunikation, Gnomonik und kulturellem Erbe. Ein Architekturtraktat unserer Zeit in 10 Büchern Nach dem Vorbild von Vitruv und Alberti Erscheint in drei Bänden der Reihe Applied Virtuality Book Series, Bd. 19, 20 und 21
