Blue Rider Geraldo Valério, 2018-03-01 “[A] dazzling vision of the way art transcends the everyday.” – Publishers Weekly, STARRED REVIEW On a gray and crowded city sidewalk, a child discovers a book. That evening, the child begins to read and is immediately carried beyond the repetitive sameness of an urban skyline into an untamed natural landscape. The child experiences a moment of true joy, and as if in response to that single blissful moment, people seem to come alive in all the other rooms of the apartment block. Thanks to the power of one book, an entire society is transformed. In creating this book, Geraldo Valério was inspired by the German Expressionist group known as Der Blaue Reiter (The Blue Rider), which formed in Munich in 1911 and included painters Franz Marc and Wassily Kandinsky. These artists sought to find the spiritual significance in art, with an emphasis on form and color. In turn, Valério has created a wordless book that speaks volumes about how art can transform us beyond the sometimes-dreary world of the everyday. Correlates to the Common Core State Standards in English Language Arts: CCSS.ELA-LITERACY.RL.1.1 Ask and answer questions about key details in a text.

Artful Math Activity Book Clarissa Grandi,2020-02 The wonderful thing about mathematical art is that the most beautiful geometric patterns can be produced without needing to be able to draw, or be 'good at art'. Mathematical art is accessible to learners of all ages: its algorithmic nature means that it simply requires the ability to follow instructions carefully and to use a pencil and ruler accurately. It is engaging, enriching, thoroughly enjoyable and is a great leveller in the classroom. Learners who may not normally shine in mathematics lessons will take your breath away with their creativity. Those who struggle with their mathematics will experience the joy of success through their mathematical art-making. The six Artful Maths activities in this book are hands-on tasks that will develop important skills such as hand-eye co-ordination, manual dexterity and design thinking, which is a valuable form of problem-solving. Decisions need to be made about placement, size and colour, all of which entail thinking about measurements, proportions and symmetry. They can be undertaken alone or with a teacher to draw out the mathematics underlying the patterns and to practice key content in the school curriculum. For ages 9 to 16+.
