Early Japanese Railways 1853-1914 Dan Free, 2012-11-27 Early Japanese Railways 1853-1914 is a cultural and engineering history of railway building in Japan during the Meiji era. The importance of early railways in the industrialization of the United States and Europe is a fact all of us are familiar with. To witness the amazing parallel development of the railways in Japan, happening at much the same time as America was connecting its vast hinterland to the East and West coasts, is an eye-opening realization. Early Japanese Railways, tells the fascinating story of the rise of Japanese rail amidst a period of rapid modernization during Japan's Meiji era. Leaving behind centuries of stagnation and isolation, Japan would emerge into the 20th century as a leading modern industrialized state. The development of the railways was a significant factor in the cultural and technological development of Japan during this pivotal period. Free's rare photographic and historical materials concerning Japan's early railways, including a print showing the miniature steam engine brought to Japan by Admiral Perry aboard his Black Ships to demonstrate American superiority, combine to form a richly detailed account that will appeal to students of Japanese history and railway buffs alike. This one-of-a-kind book, Early Japanese Railways 1853-1914, illuminates for non-Japanese-speaking readers the early history of Japanese railroads and in the process the fascinating story of Japan's prewar industrial modernization. Anyone interested in train history or model trains will find this book a fascinating read.

Carbon Technocracy Victor Seow,2023-05-12 A forceful reckoning with the relationship between energy and power through the history of what was once East Asia's largest coal mine. The coal-mining town of Fushun in China's Northeast is home to a monstrous open pit. First excavated in the early twentieth century, this pit grew like a widening maw over the ensuing decades, as various Chinese and Japanese states endeavored to unearth Fushun's purportedly "inexhaustible" carbon resources. Today, the depleted mine that remains is a wondrous and terrifying monument to fantasies of a fossil-fueled future and the technologies mobilized in attempts to turn those developmentalist dreams into reality. In Carbon Technocracy, Victor Seow uses the remarkable story of the Fushun colliery to chart how the fossil fuel economy emerged in tandem with the rise of the modern technocratic state. Taking coal as an essential feedstock of national wealth and power, Chinese and Japanese bureaucrats, engineers, and industrialists deployed new technologies like open-pit mining and hydraulic stowage in pursuit of intensive energy extraction. But as much as these mine operators idealized

the might of fossil fuel-driven machines, their extractive efforts nevertheless relied heavily on the human labor that those devices were expected to displace. Under the carbon energy regime, countless workers here and elsewhere would be subjected to invasive techniques of labor control, ever-escalating output targets, and the dangers of an increasingly exploited earth. Although Fushun is no longer the coal capital it once was, the pattern of aggressive fossil-fueled development that led to its ascent endures. As we confront a planetary crisis precipitated by our extravagant consumption of carbon, it holds urgent lessons. This is a groundbreaking exploration of how the mutual production of energy and power came to define industrial modernity and the wider world that carbon made.

The Fourth Industrial Revolution Klaus Schwab, 2017-01-03 World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine "smart factories" in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.

The Battleship Builders Constructing and Arming British Capital Ships Ian Buxton, Ian Johnston, 2013-05-08 The launch in 1606 of HMS Dreadnought, the world's first all-big-gun battleship, rendered all existing battle fleets obsolete, but at the same time it wiped out the Royal Navy's numerical advantage, so expensively maintained for decades. Already locked in the same arms race with Germany, Britain urgently needed to build an entirely new battle fleet of these larger, more complex and more costly vessels. In this she succeeded spectacularly; in little over a decade fifty such ships were completed, almost exactly double that of what Germany achieved. It was only made possible by the company's vast industrial nexus of shipbuilders, engine manufacturers, armament fleets and specialist armour producers, whose contribution to the Grand Fleet is too often ignored. This heroic achievement, and how it was done, is the subject of this book. It charts the rise of the large industrial conglomerates that were key to this success, looks at the reaction to fast-moving technical changes, and analyses the politics of funding this vast national effort, both before and beyond the Great War. It also attempts to assess the true cost- and value- of the Grand Fleet in terms of the resources consumed. And finally, by way of contrast, it describes the effects of the post-war recession, industrial contraction, and the very different responses to rearmament in the run up to the Second World War.
