Vehicular Engine Design Kevin Hoag, 2007-02-05 The mechanical engineering curriculum in most universities includes at least one elective course on the subject of reciprocating piston engines. The majority of these courses today emphasize the application of thermodynamics to engine efficiency, performance, combustion, and emissions. There are several very good textbooks that support education in these aspects of engine development. However, in most companies engaged in engine development there are far more engineers working in the areas of design and mechanical development. University studies should include opportunities that prepare engineers desiring to work in these aspects of engine development as well. My colleagues and I have undertaken the development of a series of graduate courses in engine design and mechanical development. In doing so it becomes quickly apparent that no suitable textbook exists in support of such courses. This book was written in the hopes of beginning to address the need for an engineering-based introductory text in engine design and mechanical development. It is of necessity an overview. Its focus is limited to reciprocating-piston internal-combustion engines - both diesel and spark-ignition engines. Emphasis is specifically on automobile engines, although much of the discussion applies to larger and smaller engines as well. A further intent of this book is to provide a concise reference volume on engine design and mechanical development processes for engineers serving the engine industry. It is intended to provide basic

information and most of the chapters include recent references to guide more in-depth study.

Fabric Formwork Alan Chandler, Remo Pedreschi, 2007 Fabric-cast concrete involves casting concrete in forms made with flexible formwork. This provides the potential to produce forms that are both structurally efficient and architecturally exciting in a relatively inexpensive and practical manner. By careful shaping of the fabric it is possible to produce complex shapes that would otherwise be difficult and expensive to produce using conventional formwork systems. This book contains six essays that describe the collaboration between the Universities of Edinburgh and East London, together with the Centre for Architectural and Structural Technology (CAST) at the University of Manitoba, in their detailed and practical research into concrete casting and formwork. Richly illustrated with photographs and diagrams and containing new and innovative research this book offers the architect, engineer and student inspiration and technical guidance in this re-emerging material.

The Soul and the Seed Arie Farnam, 2014-10-04 What if your very existence threatened the heart of power? It's the 21st century, right now, in America and on the surface everything looks just fine. But the commonly accepted image of society is an illusion. A clandestine force usurps the desires of individuals, and those who won't conform must be crushed to preserve the appearance of free will. Aranka is just a sixteen-year-old girl but a fluke in her genes makes her a threat. Those with power will stop at nothing to protect their supremacy. She is kidnapped by doctors who claim she's sick but it's only a matter of time before it's her turn to die. A diverse band of outlaws from every corner of the globe represent the only hope of resistance. Kenyen, a young doctor, infiltrates to the heart of the oppression but he can't stop the terror. He just wants to save one life. In the process he uncovers the Seed, the first flicker of hope in a thousand years. The Soul and the Seed is the first book in The Kyrennei Series - a dystopian fantasy

thriller of today's world. The second book is The Fear and the Solace.
