*Shooting Old Film Cameras* ,2014-02-06 This book is entirely pictorial and every image contained herein was taken with the Canon AE-1 35MM film camera. There is considerable debate among photographers about whether film is better than digital with about an equal number lining up on both sides and presenting their opinions and relevant and irrelevant data. It is not the purpose of this volume to espouse one position or another. It is sufficient to know that they are each different and subject to a considerable range of interpretation. However, it is quite enjoyable to take one of these old cameras, that have absolutely no automatic functionality, and create excellent images. I suspect that it is the same force that drives auto enthusiasts to take an old Model T Ford car and restore it. They certainly don't have the power and ease of operation of modern automobiles but they are extraordinarily fun to drive!

**Achtung-Panzer!** Heinz Guderian,1995 This is one of the most significant military books of the twentieth century. By an outstanding soldier of independent mind, it pushed forward the evolution of land warfare and was directly responsible for German armoured supremacy in the early years of the Second World War. Published in 1937, the result of 15 years of careful study since his days on the German General Staff in the First World War, Guderian's book argued, quite clearly, how vital the proper use of tanks and supporting armoured vehicles would be in the conduct of a future war. When that war came, just two years later, he proved it, leading his Panzers with distinction in the Polish, French and Russian campaigns. Panzer warfare had come of age, exactly as he had forecast. This first English translation of Heinz Guderian's classic book - used as a textbook by Panzer officers in the war - has an introduction and extensive background notes by the modern English historian Paul Harris.

The War of the Roses Warren Adler,2004 Oliver and Barbara Rose thought they had a perfect marriage, only to discover their marriage was skin deep. This story was made into a major motion picture with Michael Douglas and Kathleen Turner.

**From Cave Man to Cave Martian** Manfred "Dutch" von Ehrenfried,2019-04-05 This book explores the practicality of using the existing subsurface geology on the Moon and Mars for protection against radiation, thermal extremes, micrometeorites and dust storms rather than building surface habitats at great expense at least for those first few missions. It encourages NASA to plan a precursor mission using this concept and employ a "Short Stay" Opposition Class mission to Mars as the first mission rather than the "Long Stay" concept requiring a mission that is too long, too dangerous and too costly for man's first missions to Mars. Included in these pages is a short history on the uses of caves by early humans over great periods of time. It then describes the ongoing efforts to research caves, pits, tunnels, lava tubes, skylights and the associated technologies that pertain to potential lunar and Mars exploration and habitation. It describes evidence for existing caves and lava tubes on both the Moon and Mars. The work of noted scientists, technologists and roboticists are referenced and described. This ongoing work is more extensive than one would think and is directly applicable to longer term habitation and exploration of the Moon and Mars. Emphasis is also given to the operational aspects of working and living in lunar and Martian caves and lava tubes.

The Art of Color Photography John Hedgecoe,1998 The ability to move beyond ordinary snapshots is not a matter of expensive equipment or complicated techniques. No matter what technical advances are made, creative choice will always lie in the hands of the photographer and his/her artistic perception. The aim of this book is to reveal which choices are available so that what is a pleasurable pastime can become an absorbing art. The photographs in this volume range from startling landscapes to startling close-ups taken at high speed, and not only make up an exhibition of varied and beautiful color pictures but also represent a coherent exploration of the very nature of color. Supported by detailed technical sections, John Hedgecoe's photographs lead up from the basic theory of light to the subtle harmonies of color in all its aspects, and illustrate the theory and practice of all the essential techniques for using cameras, lenses and filters, choosing color film and composing the perfect shot.

Completely revised and updated, this book covers all the technical knowledge required to take stunning color photographs. Sections on autofocus and digital cameras, together with advice on using the latest computer manipulation programs, ensure that this is one of the most up-to-date guides available.

*Teaching Design* Meredith Davis, 2017-07-11 An Expertly Written Guidebook to Teaching Design at All Levels Teaching Design provides a practical foundation for teaching about and through design. The exploding interest in design and design thinking calls for qualified faculty members who are well prepared for a variety of institutional settings and content areas. While designers know their disciplines, they frequently lack experience in constructing responsive curricula and pedagogies for rapidly evolving professions. And while K-12 educators are trained for the classroom, their ability to transform teaching and learning through design is limited by a shortfall in professional literature. Davis's extensive experience in education offers a detailed path for the development of curricula. The book addresses writing objectives and learning outcomes that succeed in the counting-and-measuring culture of institutions but also meet the demands of a twenty-first-century education. An inventory of pedagogical strategies suggests approaches to learning that serve both college professors and K-12 teachers who want to actively engage students in critical and creative thinking. Sections on assessment make the case for performance-based activities that provide credible evidence of student learning. Davis also discusses the nature of contemporary problems and teaching strategies that are well matched to growing complexity, rapid technological change, and increased demand for interdisciplinary engagement. Examples in Teaching Design span the design disciplines and draw on Davis's experience in teaching seminars for college faculty, graduate courses for design students seeking academic careers, and workshops for K-12 teachers converting their classrooms into centers for innovation.

**Hokusai** Seiji Nagata, Hokusai Katsushika, 1999 An introduction to the life and art of Japan's famous artist export, Hokusai, written by the curator of the Ota Memorial Museum in Tokyo. His influence has extended from the Impressionists to later modern art and even to commercial design. A few of his works are so frequently reproduced that they are almost as familiar as the face of the Mona Lisa. Yet the Great Wave' and the 'Red Fuji' from the'

*Stop Motion: Craft Skills for Model Animation* Susannah Shaw, 2012-09-10 To make great animation, you need to know how to control a whole world: how to make a character, how to make that character live and be happy or sad. Susannah Shaw provides the first truly practical introduction to the craft skills of model animation. This is a vital book in the development of model animation which, following the success of Aardman's first full-length film 'Chicken Run', is now at the forefront of modern animation.
