Modelling Naval Ships in Small Scales Mike McCabe,2021-04-26 This book provides a wealth of practical guidance on building and painting realistic model naval ships aimed at those who are new to this hobby through to the experienced modeller. An in-depth look at the creation of four models is included: the Type 45 destroyer HMS Daring (Dragon), the pre-war aircraft carrier USS Wasp (Aoshima), the River-class frigate HMS Nadder (Starling Models) and the 'pocket battleship' Admiral Graf Spee (Academy). With a focus on the popular kit scales of 1/700 and 1/350 in the waterline style, this book demonstrates the techniques used in building model ships, from the basic to the more complex, larger-scale models requiring many differing skills. There are chapters on the fundamentals such as building resin kits, painting and weathering, rigging and creating a water effect. It provides guidance on more advanced techniques such as the use of photo-etched parts and creating rough-water effects. Finally, it is packed with helpful tips and finishing touches, such as making flags and how to take professional-standard photographs of your completed model.

Navy Board Ship Models Simon Stephens,Nick Ball,2018-09 From about the middle of the seventeenth century the Navy's administrators began to commission models of their ships that were accurately detailed and, for the

first time, systematically to scale. These developed a recognized style, which included features like the unplanked lower hull with a simplified pattern of framing that emphasized the shape of the underwater body. Exquisitely crafted, these were always rare and highly prized objects - indeed, Samuel Pepys expressed a profound desire to own one - and today they are widely regarded as the acme of the ship modeler's art. As benefits its subject, Navy Board Ship Models is visually striking, with numerous color photographs that make it as attractive as it is informative to anyone with an interest in model making or historic ships.

Ship Models from Kits Dr David Griffith, 2011-02-28 In the past thirty years the world of model kits has undergone a veritable revolution. New techniques in injection moulding have improved the scale accuracy and surface detail of the humble plastic kit, while many specialist companies now produce top-quality resin models, vastly broadening the range of subjects on the market. However, the really radical change has been the advent of photo-etched brass fret, which allows the finest detail to be reproduced to scale. In ship modelling, this has resulted in a new form of the hobby, mid-way between traditional build-from-the-box simplicity and the time-consuming demands of fabricating everything from scratch. These new materials have prompted innovative techniques, which are comprehensively demonstrated in this new manual. Designed for those wishing to achieve the best results from their ship kits in the 1:700 to 1:350 range of scales, it uses step by step

photographs to take the reader through the building of two models, one in plastic and one in resin, from basic construction, fittings and detailing, to painting, finishing and display. Written by a highly experienced, award-winning ship modeller, the book is a showcase for the contemporary approach to the hobby.

Miniature Ship Models Paul Jacobs, 2008-05-30 This book is the first comprehensive history of how the 1:1200 scale and its 1:1250 continental equivalent became accepted as the modern standard for miniature ship models. The origins can be traced back to the first years of the twentieth century and their use as identification aids by the military during the First World War, but when peace came the manufacturers aimed their increasingly sophisticated products at collectors, and acquiring, modifying or scratch-building miniature ship models has been an avidly pursued hobby ever since. This book charts the commercial rise and fall of the manufacturers, and the advancing technology that produces ever more detailed and accurate replicas. The author - himself a lifetime collector and builder of models - looks at the products of each manufacturer, past and present, rating their quality and suggesting why some are regarded as more collectible than others. But the book deals with more than off-the-shelf models, covering subsidiary issues like painting, modifying and diorama settings, and is illustrated throughout with many of the finest examples of the genre. The combination of fascinating background information with stunning visual presentation will make this book

irresistible to any collector or enthusiast.

Large Scale Warship Models Kerry Jang, 2019-02-28 This illustrated guide presents step-by-step instructions and techniques for warship modelers ready for the challenge of building at larger scales. Many warship modelers who work in smaller scales are daunted by the challenge of tackling something larger. But in Large Scale Warship Models, expert modeler Kerry Jang demonstrates that it's not as difficult as it may seem. In fact, any experienced modeler will already possess the basic skills required. This volume covers the essential new techniques for working in scales that capture the grandeur of actual ships. In the first part of the book, Jang discusses how to choose between a kit, a semi-kit or building from scratch. He also covers what conventional kit building skills are transferable to work on large-scale projects. Novel requirements like research, obtaining plans and sourcing material or fittings are also covered. The second part describes building methods, including the latest techniques like casting fittings in resin. These methods apply to both static and radio-controlled models. Original color photos illustrate each chapter, and the book concludes with a gallery of superb models intended to inspire the would-be large-scale warship modeler to take the plunge.

The Master Shipwright's Secrets Richard Endsor, 2020-03-05 AWARDED THE ANDERSON MEDAL 2020 Inspired by the recent discovery of mathematically calculated digital plans for a fourth-rate ship by the Deptford master

shipwright, John Shish, *The Master Shipwright's Secrets* is an illustrated history of Restoration shipbuilding focused on the Tyger, one of the smaller but powerful two-deck warships of the period. It examines the proceedings of King Charles II in deciding the types of ship he wanted and his relationship with his master shipwrights. This fascinating book reveals the many secrets of Charles II's shipwrights through an analysis of John Shish's plans for the Tyger, revealing innovative practical calculations which differ significantly from the few contemporary treatises on the subject and the complicated process of constructing the moulds necessary to make the ship's frame. All the other duties performed by the master shipwrights, such as repairing ships, controlling their men and keeping up with the latest inventions are also discussed in detail. *The Master Shipwright's Secrets* is replete with beautiful and detailed illustrations of the construction of the Tyger and explores both its complicated history and its complex rebuilding, complete with deck plans, internal sections, and large-scale external shaded drawings. The title also explores associated ships, including another fourth-rate ship, the Mordaunt, which was purchased into the Navy at the time and underwent a dimensional survey by John Shish. A rare contemporary section drawing of another fourth-rate English ship and constructional drawings of Shish's later fourth-rate ship, St Albans, are also included.

Ship Modeling Simplified: Tips and Techniques for Model Construction from Kits Frank Mastini, 1990-03-22 In *Ship Modeling Simplified*, master model

builder Frank Mastini puts to paper the methods he's developed over 30 years at the workbench to help novices take their first steps in an exciting pastime. You don't need the deftness of a surgeon or the vocabulary of an old salt to build a model. What you need is an understanding coach. Mastini leads readers from the mysteries of choosing a kit and setting up a workshop through deciphering complicated instructions and on to painting, decorating, and displaying finished models--with patience and clarity, not condescension. He reveals dozens of shortcuts: How to plank a hull egg-shell tight; how to build and rig complicated mast assemblies without profanity; how to create sails that look like sails. . . . And along the way he points out things that beginners usually do wrong--beforehand, not after they've taken hammers to their projects. Ship Modeling Simplified even includes an Italian-English dictionary of nautical terms, the key to assembling the many high-quality Italian kits on the American market. Model building is fun, and not nearly as difficult as some experts would have you believe. Here is everything you'll ever need to get started in a hobby that will last a lifetime.

The Battleship Bismarck Waldemar Góralski, 2014 Even if they failed to encounter the enemy, every one of their sorties amounted to a brush with death. There were many dangers for Luftwaffe night fighters to contend with; hazardous weather conditions, fog rolling out of nowhere, return fire from the British bombers, enemy night fighters at work over German airfields and simple fatigue could all lead to tragedy. One of the men who survived all of

this was Ofw. Kurt Bundrock. Born on 2nd February 1917 in Berlin, Bundrock flew as Bordfunker (radio operator) with NJG 1's ace Hptm. Reinhold Knacke (44 night victories).

A Man and His Ship Steven Ujifusa, 2013-06-04 “A fascinating historical account...A snapshot of the American Dream culminating with this country’s mid-century greatness” (The Wall Street Journal) as a man endeavors to build the finest, fastest, most beautiful ocean liner in history. The story of a great American Builder at the peak of his power, in the 1940s and 1950s, William Francis Gibbs was considered America’s best naval architect. His quest to build the finest, fastest, most beautiful ocean liner of his time, the SS United States, was a topic of national fascination. When completed in 1952, the ship was hailed as a technological masterpiece at a time when “made in America” meant the best. Gibbs was an American original, on par with John Roebling of the Brooklyn Bridge and Frank Lloyd Wright of Fallingwater. Forced to drop out of Harvard following his family’s sudden financial ruin, he overcame debilitating shyness and lack of formal training to become the visionary creator of some of the finest ships in history. He spent forty years dreaming of the ship that became the SS United States. William Francis Gibbs was driven, relentless, and committed to excellence. He loved his ship, the idea of it, and the realization of it, and he devoted himself to making

it the epitome of luxury travel during the triumphant post-World War II era. Biographer Steven Ujifusa brilliantly describes the way Gibbs worked and how his vision transformed an industry. *A Man and His Ship* is a tale of ingenuity and enterprise, a truly remarkable journey on land and sea.
