The Atlas of Economic Complexity Ricardo Hausmann, Cesar A. Hidalgo, Sebastian Bustos, Michele Coscia, Alexander Simoes, 2014-01-17 Maps capture data expressing the economic complexity of countries from Albania to Zimbabwe, offering current economic measures and as well as a guide to achieving prosperity Why do some countries grow and others do not? The authors of The Atlas of Economic Complexity offer readers an explanation based on Economic Complexity, a measure of a society's productive knowledge. Prosperous societies are those that have the knowledge to make a larger variety of more complex products. The Atlas of Economic Complexity attempts to measure the amount of productive knowledge countries hold and how they can move to accumulate more of it by making more complex products. Through the graphical representation of the Product Space, the authors are able to identify each country's adjacent possible, or potential new products, making it easier to find paths to economic diversification and growth. In addition, they argue that a country's economic complexity and its position in the product space are better predictors of economic growth than many other well-known development indicators, including measures of competitiveness, governance, finance, and schooling. Using innovative visualizations, the book locates each country in the product space, provides complexity and growth potential rankings for 128 countries, and offers individual country pages with detailed information about a country's current capabilities and its diversification options. The maps and visualizations included in the Atlas can be used to find more viable paths to greater productive knowledge and prosperity.

Beyond Jesus Patricia A. Pearce, 2018-07-03 In the crucible of grief following a friend's death, Presbyterian pastor Patricia Pearce sensed a dimension of existence beneath her ordinary perception-and became resolved to discover it. She soon found herself in a vortex of revelatory dreams, synchronicities, energy openings, and insights that shattered her worldview, exposed a unified Reality of Love, and unveiled the illusory nature of the ego and the world it has created. Faced with these discoveries, she struggled to remain in a religion that, she now realized, has been shaped by the very ego consciousness Jesus transcended and urged others to abandon. Enlightening, revelatory, and bold, Beyond Jesus reveals how our political and religious institutions are an outward manifestation of the inner beliefs we hold about who we are, and that beneath the layers of dogma about Jesus lies a key to our spiritual evolution and the astonishing possibility it holds for the future.

*Mechcomp2* Antonio J.M. Ferreira, Ana M.A. Neves, Erasmo Viola, Francesco Tornabene, Nicholas Fantuzzi, 2016-05-20 Composites materials have aroused a great interest over the last few decades. Several applications of fibrous composites, functionally graded materials, laminated composites, nano-structured reinforcements, morphing structures, can be found in many engineering fields, such as aerospace, mechanical, naval and civil engineering. The necessity of lightweight structures, smart and adaptive systems, high-level strength, have led both the academic research and the manufacturing development to a recurring employment of these materials. Many journal papers and technical notes have been published extensively over the last seventy years in international scientific journals of different engineering fields. For this reason, the establishment of this second edition of Mechanics of Composites International Conference has appeared appropriate to continue what has been begun during the first edition occurred in 2014 at Stony Brook University (USA). MECHCOMP wants to be an occasion for many researchers from each part of the globe to meet and discuss about the recent advancements regarding the use of composite structures. As a proof of this event, which has taken place in Porto (Portugal), selected plenary and key-note lectures have been collected in the present book.

*The Tang Shipwreck* Alan Chong,Stephen A. Murphy,2017 This book tells the story and presents the objects found on the Tang Shipwreck, discovered off Belitung Island in Indonesia in 1998, and now housed at the Asian Civilisations Museum in Singapore. It is one of the most significant archaeological discoveries of recent times. Found at the site was a remarkable cargo of some 60,000 Chinese ceramics dating from the Tang dynasty (618-907), along with finely wrought gold and silver objects, bronze mirrors, and more ordinary objects belonging to the crew. Just as remarkable were the remnants of the ship itself, which consisted of wooden planks sewn together with rope. This construction technique clearly indicated that the vessel had been built in the Persian Gulf or western reaches of the Indian Ocean, and had sailed all the way from the Middle East to China, and was on its way home when it ran aground in the Java Sea. The Tang Shipwreck is a time capsule into ninth-century China, but also reflects many other cultures. The ceramics were made for consumers halfway around the world, which demonstrates the market demand and taste could play a role in mass production even in an age of agonizingly slow and perilous communication. The ten essays in this profusely illustrated volume discuss the ceramics and other commodities onboard, the ship's construction and possible origin, China's maritime trade in the Tang period, Chinese ceramic production, ports of call in Asia and Southeast Asia, and life on board the ship.
