Paper Airplanes Emery J. Kelly,1997-01-01 Presents information on aerodynamic principles and flying techniques along with instructions for making twelve different paper airplanes.

SR-71 Blackbird Paul F. Crickmore,2002 No other aircraft has approached the spectacular performance of the Blackbird. It flew at over three and a half times the speed of sound at 88,000 feet, an altitude that was at the very edge of space. It had an unrefuelled range of 3,500 miles and its two Pratt and Whitney J58 bypass turbojets generated 60,000 pounds of thrust and guzzled 8,000 gallons of fuel per hour. It was an awesome airplane in every respect. In 1964 America's President Johnson announced that Lockheed had developed an aircraft dedicated to strategic reconnaissance and so fast that no other aircraft could catch it. It took the world by storm. It was developed by the renowned Lockheed Skunk Works and employed many forms of new technology made necessary by the excesses of speed, altitude and temperature to which the aircraft was subjected. It served for many years during the Cold War until superseded by satellite technology. This is the perfect introductory book for the general reader, enthusiast and modeler alike wishing to find a succinct yet detailed introduction to the design and history of the Blackbird. Why was the aircraft conceived? What was it like to fly in combat? Who were the people who designed it and became famous for flying it? What were its virtues and vices? These and many more questions are answered here, plus a host of illustrations that show variations of color schemes used in different operational theatres of combat and rare photographs taken when the heat was on.

The Complete Book of the SR-71 Blackbird Richard H. Graham,2015-10-26 The ultimate guide to the history, development, manufacture, modification, and active service of all fifty models in the SR-71 program. At the height of the Cold War in 1964, President Johnson announced a new aircraft dedicated to strategic reconnaissance. The Lockheed SR-71 Blackbird spy plane flew more than three-and-a-half times the speed of sound—so fast that no other aircraft could catch it. Above 80,000 feet, its pilots had to wear full-pressure flight suits similar to what was used aboard the space shuttle. Developed by the renowned Lockheed Skunk Works, the SR-71 was an awesome aircraft in every respect. It was withdrawn from use in 1998, when it was superseded by satellite technology. Twelve of the thirty-two aircraft were destroyed in accidents, but none were ever lost to enemy action. Throughout its thirty-four-year career, the SR-71 was the world’s fastest and highest-flying operational manned aircraft. It set world records for altitude and speed: an absolute altitude record of 85,069 feet and an absolute speed record of 2,193.2 miles per hour. The Complete Book of the SR-71 Blackbird covers every aspect of the SR-71’s development, manufacture, modification, and active service from the insider’s perspective of one of its pilots and is lavishly illustrated with more than 400 photos. Former pilot and author Richard Graham also examines each of the fifty planes that came out the SR-71 program (fifteen A-12s; three YF-12s; and thirty-two SR-71s) and tells each plane’s history, its unique specifications, and where each currently resides.
