**AU-18 Space Primer** Air Command Staff College,2012-08-01 The US National Space Policy released by the president in 2006 states that the US government should develop space professionals. As an integral part of that endeavor, AU-18, Space Primer, provides to the joint war fighter an unclassified resource for understanding the capabilities, organizations, and operations of space forces. This primer is a useful tool both for individuals who are not space aware-unacquainted with space capabilities, organizations, and operations-and for those who are space aware, especially individuals associated with the space community, but not familiar with space capabilities, organizations, and operations outside their particular areas of expertise. It is your guide and your invitation to all the excitement and opportunity of space. Last published in 1993, this updated version of the Space Primer has been made possible by combined efforts of the Air Command and Staff College's academic year 2008 Jointspacemindedness and Operational Space research seminars, as well as select members of the academic year 2009 Advanced Space research seminar. Deep Learning with Python Francois Chollet,2017-11-30 Summary Deep Learning with Python introduces the field of deep learning using the Python language and the powerful Keras library. Written by Keras creator and Google AI researcher François Chollet, this book builds your understanding through intuitive explanations and practical examples. Purchase of the print book includes a free eBook in PDF, Kindle, and ePub formats from Manning Publications. About the Technology Machine learning has made remarkable progress in recent years. We went from near-unusable speech and image recognition, to near-human accuracy. We went from machines that couldn't beat a serious Go player, to defeating a world champion. Behind this progress is deep learning—a combination of engineering advances, best practices, and theory that enables a wealth of previously impossible smart applications. About the Book Deep Learning with Python introduces the field of deep learning using the Python language and the powerful Keras library. Written by Keras creator and Google AI researcher François Chollet, this book builds your understanding through intuitive explanations and practical examples. You'll explore challenging concepts and practice with applications in computer vision, natural-language processing, and generative models. By the time you finish, you'll have the knowledge and hands-on skills to apply deep learning in your own projects. What's Inside Deep learning from first principles Setting up your own deep-learning environment Image-classification models Deep learning for text and sequences Neural style transfer, text generation, and image generation About the Reader Readers need intermediate Python skills. No previous experience with Keras, TensorFlow, or machine learning is required. About the Author François Chollet works on deep learning at Google in Mountain View, CA. He is the creator of the Keras deep-learning library, as well as a contributor to the TensorFlow machine-learning framework. He also does deep-learning research, with a focus on computer vision and the application of machine learning to formal reasoning. His papers have been published at major conferences in the field, including the Conference on Computer Vision and Pattern Recognition (CVPR), the Conference and Workshop on Neural Information Processing Systems (NIPS), the International Conference on Learning Representations (ICLR), and others. Table of Contents PART 1 – FUNDAMENTALS OF DEEP LEARNING What is deep learning? Before we begin: the mathematical building blocks of neural networks Getting started with neural networks Fundamentals of machine learning PART 2 – DEEP LEARNING IN PRACTICE Deep learning for computer vision Deep learning for text and sequences Advanced deep-learning best practices Generative deep learning Conclusions appendix A – Installing Keras and its dependencies on Ubuntu appendix B – Running Jupyter notebooks on an EC2 GPU instance

**Space Mining and Manufacturing** Davide Sivoletta,2019-12-05 This book produces convincing evidence that exploiting the potential of space could help solve many environmental and social issues affecting our planet, such as pollution, overcrowding, resource depletion and conflicts, economic inequality, social unrest, economic instability and unemployment. It also touches on the legal problems that will be encountered with the implementation of the new technologies and new laws that will need to be enacted and new organizations that will need to be formed to deal with these changes. This proposition for a space economy is not science fiction, but well within the remit of current or under development technologies. Numerous technologies are described and put together to form a coherent and feasible road map that, if implemented, could lead humankind towards a brighter future.

*The Other End of the Leash* Patricia McConnell, Ph.D.,2009-02-19 Learn to communicate with your dog—using their language “Good reading for dog lovers and an immensely useful manual for dog owners.”—The Washington Post An Applied Animal Behaviorist and dog trainer with more than twenty years' experience, Dr. Patricia McConnell reveals a revolutionary new perspective on our relationship with dogs—sharing insights on how “man’s best friend” might interpret our behavior, as well as essential advice on how to interact with our four-legged friends in ways that bring out the best in them. After all, humans and dogs are two entirely different species, each shaped by its individual evolutionary heritage. Quite simply, humans are primates and dogs are canids (as are wolves, coyotes, and foxes). Since we each speak a different native tongue, a lot gets lost in the translation. This marvelous guide demonstrates how even the slightest changes in our voices and in the ways we stand can help dogs understand what we want. Inside you will discover: • How you can get your dog to come when called by acting less like a primate and more like a dog • Why the advice to “get dominance” over your dog can cause problems • Why “rough and tumble primate play” can lead to trouble—and how to play with your dog in ways that are fun and keep him out of mischief • How dogs and humans share personality types—and why most dogs want to live with benevolent leaders rather than “alpha wanna-bes!” Fascinating, insightful, and compelling, *The Other End of the Leash* is a book that strives to help you connect with your dog in a completely new way—so as to enrich that most rewarding of relationships.

**Eyes Behind the Lines: US Army Long-Range Reconnaissance and Surveillance Units** James F. Gebhardt,2005 Eyes Behind the Lines: US Army Long-Range Reconnaissance and Surveillance Units is the 10th study in the Combat Studies Institute (CSI) Global War on Terrorism (GWOT) Occasional Paper series. This work is an outgrowth of concerns identified by the authors of On Point: The United States Army in Operation IRAQI FREEDOM. Specifically, these authors called into question the use of long-range surveillance (LRS) assets by commanders during that campaign and suggested an assessment ought to be made about their continuing utility and means of employment. This revision contains some important additional information the author received after this book was originally published Major (Retired) James Gebhardt, of CSI, researched and wrote this Occasional Paper with that end in view. In this study, Gebhardt surveys the US Army's historical experience with LRRP and LRS units from the 1960s Cold War and Vietnam War, through their resurgence in the 1980s and use in Operations JUST CAUSE and DESERT STORM, to the advent of the GWOT. The paper's analytical framework examines each era of LRS units in terms of doctrine, organization, training, materiel, leadership, and personnel. In doing so, the author makes a strong case for continuing the LRS capability in the Army's force structure. The variety of environments and enemies likely to be faced by the military in the GWOT continues to demand the unique human intelligence abilities of trained and organized LRS units. As the Army leads the Armed Forces of the United States in combating terrorists where they live, the lessons found in this survey remain timely and relevant.

*The Wretched of the Screen* Hito Steyerl,2013-04-05 In Hito Steyerl's writing we begin to see how, even if the hopes and desires for coherent collective political projects have been displaced onto images and screens, it is precisely here that we must look frankly at the technology that seals them in. *The Wretched of the Screen* collects

a number of Steyerl's landmark essays from recent years in which she has steadily developed her very own politics of the image. Twisting the politics of representation around the representation of politics, these essays uncover a rich trove of information in the formal shifts and aberrant distortions of accelerated capitalism, of the art system as a vast mine of labor extraction and passionate commitment, of occupation and internship, of structural and literal violence, enchantment and fun, of hysterical, uncontrollable flight through the wreckage of postcolonial and modernist discourses and their unanticipated openings. e-flux journal Series edited by Julieta Aranda, Brian Kuan Wood, Anton Vidokle

**Hot Talk, Cold Science** S. Fred Singer,David R. Legates,Anthony R. Lupo,2021-01-18 Are the often alarming claims about global warming based on science and justified by the facts? Is the human race really facing a major crisis due to emissions from fossil fuels? Would the proposed Climate Treaty solve a real environmental threat or would it create worldwide economic and social harm? S. Fred Singer is a distinguished astrophysicist who has taken a hard, scientific look at the evidence. In this new book, Dr. Singer explores the inaccuracies in historical climate data, the limitations of attempting to model climate on computers, solar variability and its impact on climate, the effects of clouds, ocean currents, and sea levels on global climate, and factors that could mitigate any human impacts on world climate.Singer's masterful analysis decisively shows that the pessimistic, and often alarming, global warming scenarios depicted in the media have no scientific basis. In fact, he finds that many aspects of any global warming, such as a longer growing season for food and a reduced need to use fossil fuels for heating, would actually have a positive impact on the human race. Further, Singer notes how many proposed solutions to the global warming crisis (like carbon taxes) would have severe consequences for economically disadvantaged groups and nations.According to Arthur C. Clarke, author of 2001: A Space Odyssey, Hot Talk, Cold Science dares to point out that 'the Emperor has no clothes.' Is there evidence to suggest discernible human influence on global climate? Of great interest, this book demonstrates that, at best, the evidence is sketchy and incomplete. Hot Talk, Cold Science is essential reading for anyone who wants to be fully informed about the global warming debate.

**Writing Research Papers** James D. Lester (Jr.),2015 The definitive research paper guide, Writing Research Papers combines a traditional and practical approach to the research process with the latest information on electronic research and presentation. This market-leading text provides students with step-by-step guidance through the research writing process, from selecting and narrowing a topic to formatting the finished document. Writing Research Papers backs up its instruction with the most complete array of samples of any writing guide of this nature. The text continues its extremely thorough and accurate coverage of citation styles for a wide variety of disciplines. The fourteenth edition maintains Lester's successful approach while bringing new writing and documentation updates to assist the student researcher in keeping pace with electronic sources.

*The Guns at Last Light* Rick Atkinson,2014-05-13 The final volume of the trilogy chronicles the Allied victory in Western Europe, from the brutal struggles in Normandy and at the Battle of the Bulge to the freeing of Paris, as experienced by participants from every level of the military.

**Reach for the Stars** Gopal Raj,2000 Few space programmes anywhere in the world would have had such a modest beginning: one van and a small fleet of precious bicycles used, besides other things, for ferrying parts of sounding rockets--rockets that glean information on the upper atmosphere--to the launch site. And for use as an office and laboratory was the St Mary Magdalene Church at Thumba, the small fishing village in Kerala where it all started. What the programme lacked in facilities, however, was more than made up for by the dedication of the small band of people who worked there, and their calibre. Leading this team was Vikram Sarabhai, one of the great visionaries of modern India. A great motivator of people, he was able to inspire his talented team to put India firmly on the path to space exploration. Then and now, the Indian Space Research Organization (ISRO) has continued to draw gifted people of the stature of Satish Dhawan, Brahm Prakash, A.P.J. Abdul Kalam and U.R. Rao, to list only a few. Reach for the Stars: The Evolution of India's Rocket Programme relates, for the first time, how India developed its satellite launch capability. heartbreak, and one rendered all the more difficult as most of the technology had to be developed indigenously, ranging from the rocket engines themselves to precision guidance systems. Today India is able to design and build its own Polar Satellite Launch Vehicles (PSLV) to launch remote sensing satellites used in weather forecasting, resource mapping and crop yield estimates--functions crucial to putting the country on the fast track to development. In fact, the Indian remote sensing satellites form the largest constellation of such satellites in space. From sounding rockets to PSLVs has been a huge technological jump, and in this dramatic and amazing story author Gopal Raj tells how the transition was made, and the reasoning behind some of ISRO's most difficult choices in the course of thirty-eight years. It is specially apt that the book comes when the Indian rocket programme is poised at the edge of a new phase of growth, when cryogenic technology will give India the capability to launch its own communication satellites. story of a group of people who, as with their gravity-defying rockets, could rise above their limitations to accomplish the impossible.
