**1996 IUCN Red List of Threatened Animals** Ulf Gärdenfors, A. J. Stattersfield, International Union for Conservation of Nature and Natural Resources. Species Survival Commission, 1996 The 1994 IUCN Red List of Threatened Animals was a major advance on its predecessors in clarity of layout and amount of information presented. This is taken further in the 1996 edition, which is also the first global compilation to use the complete new IUCN Red List category system.

From My Head to My Toes I Say What Goes Charlotte Barkla, 2022-02-02 From the author of *All Bodies Are Good* Bodies comes *From My Head to My Toes, I Say What Goes!* A light-hearted exploration of boundaries, this book discusses consent and control for a young audience. As with *All Bodies Are Good* Bodies, this story is bold and beautiful, loud and proud, with the feel-good factor turned up to eleven.

**Cosmo-eggs** Motoyuki Shitamichi, 2019 Presented at the Japan Pavilion as part of the 2019 Venice Biennale. Cooperation is a vital element of the exhibition, which forms a collective effort to explore new meanings and possible forms of co-existence between diverse beings. Further, it examines the potential of unknown ideas and experiments that are created through artists' mutual inspirations. Designed by Yoshihisa Tanaka, the book collects the writings and visual notes by the four participants (artist Motoyuki Shitamichi, composer Taro Yasuno, anthropologist Toshiaki Ishikura, and architect Fuminori Nousaku) as well as curator Hiroyuki Hattori. 00Exhibition: Japan Pavilion, 58th Biennale, Venice, Italy (11.05.-14.11.2019).

*Animal Anomalies* Lewis I. Held, Jr, 2021-03-18 Highlights what we know about the pathways pursued by embryos and evolution, and stresses what we do not yet know.

*Edible Insects* Arnold van Huis, Food and Agriculture Organization of the United Nations, 2013 Edible insects have always been a part of human diets, but in some societies there remains a degree of disdain and disgust for their consumption. Although the majority of consumed insects are gathered in forest habitats, mass-rearing systems are being developed in many countries. Insects offer a significant opportunity to merge traditional knowledge and modern science to improve human food security worldwide. This publication describes the contribution of insects to food security and examines future prospects for raising insects at a commercial scale to improve food and feed production, diversify diets, and support livelihoods in both developing and developed countries. It shows the many traditional and potential new uses of insects for direct human consumption and the opportunities for and constraints to farming them for food and feed. It examines the body of research on issues such as insect nutrition and food safety, the use of insects as animal feed, and the processing and preservation of insects and their products. It highlights the need to develop a regulatory framework to govern the use of insects for food security. And it presents case studies and examples from around the world. Edible insects are a promising alternative to the conventional production of meat, either for direct human consumption or for indirect use as feedstock. To fully realise this potential, much work needs to be done by a wide range of stakeholders. This publication will boost

awareness of the many valuable roles that insects play in sustaining nature and human life, and it will stimulate debate on the expansion of the use of insects as food and feed.

*Ehlers-Danlos Syndrome: A Multidisciplinary Approach* J.W.G. Jacobs, L.J.M. Cornelissens, M.C. Veenhuizen, 2018-08-14 Generalized hypermobility has been known since ancient times, and a clinical description of Ehlers-Danlos syndrome (EDS) is said to have first been recorded by Hippocrates in 400 BC. Hypermobility syndromes occur frequently, but the wide spectrum of possible symptoms, coupled with a relative lack of awareness and recognition, are the reason that they are frequently not recognized, or remain undiagnosed. This book is an international, multidisciplinary guide to hypermobility syndromes, and EDS in particular. It aims to create better awareness of hypermobility syndromes among health professionals, including medical specialists, and to be a guide to the management of such syndromes for patients and practitioners. It is intended for use in daily clinical practice rather than as a reference book for research or the latest developments, and has been written to be understandable for any healthcare worker or educated patient without compromise to the scientific content. The book is organized as follows: chapters on classifications and genetics are followed by chapters on individual types, organ (system) manifestations and complications, and finally ethics and therapeutic strategies, with an appendix on surgery and the precautions which should attend it. A special effort has been made to take account of the perspective of the patient; two of the editors have EDS. The book will be of interest to patients with hypermobility syndromes and their families, as well as to all those healthcare practitioners who may encounter such syndromes in the course of their work.

*The Mushroom at the End of the World* Anna Lowenhaupt Tsing, 2017-09-19 What a rare mushroom can teach us about sustaining life on a fragile planet Matsutake is the most valuable mushroom in the world—and a weed that grows in human-disturbed forests across the northern hemisphere. Through its ability to nurture trees, matsutake helps forests to grow in daunting places. It is also an edible delicacy in Japan, where it sometimes commands astronomical prices. In all its contradictions, matsutake offers insights into areas far beyond just mushrooms and addresses a crucial question: what manages to live in the ruins we have made? A tale of diversity within our damaged landscapes, *The Mushroom at the End of the World* follows one of the strangest commodity chains of our times to explore the unexpected corners of capitalism. Here, we witness the varied and peculiar worlds of matsutake commerce: the worlds of Japanese gourmets, capitalist traders, Hmong jungle fighters, industrial forests, Yi Chinese goat herders, Finnish nature guides, and more. These companions also lead us into fungal ecologies and forest histories to better understand the promise of cohabitation in a time of massive human destruction. By investigating one of the world's most sought-after fungi, *The Mushroom at the End of the World* presents an original examination into the relation between capitalist destruction and collaborative survival within multispecies landscapes, the prerequisite for continuing life on earth.

*Does It Fart?* Nick Caruso, Dani Rabaiotti, 2019-07-11 An explosive and hilarious look at facts, farts, and fun! Dogs fart. Cats fart. Horses fart (a lot). But what about snakes? Spiders? Octopuses? What about chimpanzees?

Cheetahs? Or dinosaurs? In this gaseous guide to kids' favourite animals (and some they've probably never heard of), young readers will discover not only which animals fart, but also which have the stinkiest farts, which fart the most, and where all this smelly stuff comes from. They'll even learn which species has its own secret fart code! Perfect for reluctant readers, and with full-colour illustrations throughout, *Does It Fart?* is the funniest book you never knew you needed. Based on the New York Times bestseller *Does It Fart?: The Definitive Field Guide to Animal Flatulence*.

**When I Wake Up** Seth Fishman, 2021-11-09 Rose, a rising star in the new field of the science of the individual, shows that no one is average. This isn't hollow sloganeering, it's a mathematical fact with enormous practical consequences. But while everyone knows people learn and develop in distinctive ways, these unique patterns of behaviors are lost in schools and businesses which have been designed around the mythical 'average person'. This average-size-fits-all model ignores people's differences and fails at recognizing talent. It's time to change it.

The Ben Cao Gang Mu Shizhen Li, 2016-04-15 This is the original Chinese edition of the Ben cao gang mu. Compiled in the second half of the sixteenth century by a team led by the physician Li Shizhen (1518–1593) on the basis of previously published books and contemporary knowledge, the Ben cao gang mu is considered the largest encyclopedia of natural history in a long tradition of Chinese materia medica works. Its description of almost 1,900 pharmaceutically used natural and man-made substances marks the apex of the development of premodern Chinese pharmaceutical knowledge.

Molecular Evolution Roderick D.M. Page, Edward C. Holmes, 2009-07-14 The study of evolution at the molecular level

has given the subject of evolutionary biology a new significance. Phylogenetic 'trees' of gene sequences are a powerful tool for recovering evolutionary relationships among species, and can be used to answer a broad range of evolutionary and ecological questions. They are also beginning to permeate the medical sciences. In this book, the authors approach the study of molecular evolution with the phylogenetic tree as a central metaphor. This will equip students and professionals with the ability to see both the evolutionary relevance of molecular data, and the significance evolutionary theory has for molecular studies. The book is accessible yet sufficiently detailed and explicit so that the student can learn the mechanics of the procedures discussed. The book is intended for senior undergraduate and graduate students taking courses in molecular evolution/phylogenetic reconstruction. It will also be a useful supplement for students taking wider courses in evolution, as well as a valuable resource for professionals. First student textbook of phylogenetic reconstruction which uses the tree as a central metaphor of evolution. Chapter summaries and annotated suggestions for further reading. Worked examples facilitate understanding of some of the more complex issues. Emphasis on clarity and accessibility.

**Frog in the Well** Donald Keene, Kazan Watanabe, 2006 Frog in the Well is a vivid and revealing account of Watanabe Kazan, one of the most important intellectuals of the late Tokugawa period. From his impoverished upbringing to his tragic suicide in exile, Kazan's life and work reflected a turbulent period in Japan's history. He was a famous artist, a Confucian scholar, a student of Western culture, a samurai, and a critic of the shogunate who, nevertheless, felt compelled to kill himself for fear that he had caused his lord anxiety. During this period, a typical Japanese scholar or artist refused to acknowledge the outside world, much like a frog in the well that knows nothing of the ocean, but Kazan actively sought out Western learning. He appreciated European civilization and bought every scrap of European art that was available in Japan. He became a painter to help his family out of poverty and, by employing the artistic techniques of the West, achieved great success with his realistic and stylistically advanced portraits. Although he remained a nationalist committed to the old ways, Kazan called on the shogunate to learn from the West or risk disaster. He strove to improve the agricultural and economic conditions of his province and reinforce its defenses, but his criticisms and warnings about possible coastal invasions ultimately led to his arrest and exile. Frog in the Well is the first full-length biography of Kazan in English, and, in telling his life's story, renowned scholar Donald Keene paints a fascinating portrait of the social and intellectual milieu of the late Tokugawa period. Richly illustrated with Kazan's paintings, Frog in the Well illuminates a life that is emblematic of the cultural crises affecting Japan in the years before revolution.

The MIT Encyclopedia of the Cognitive Sciences (MITECS) Robert A. Wilson, Frank C. Keil, 2001-09-04 Since the 1970s the cognitive sciences have offered multidisciplinary ways of understanding the mind and cognition. The MIT Encyclopedia of the Cognitive Sciences (MITECS) is a landmark, comprehensive reference work that represents the methodological and theoretical diversity of this changing field. At the core of the encyclopedia are 471 concise entries, from Acquisition and Adaptationism to Wundt and X-bar Theory. Each article, written by a leading

researcher in the field, provides an accessible introduction to an important concept in the cognitive sciences, as well as references or further readings. Six extended essays, which collectively serve as a roadmap to the articles, provide overviews of each of six major areas of cognitive science: Philosophy; Psychology; Neurosciences; Computational Intelligence; Linguistics and Language; and Culture, Cognition, and Evolution. For both students and researchers, MITECS will be an indispensable guide to the current state of the cognitive sciences.

**Sexual Reproduction in Animals and Plants** Hitoshi Sawada, Naokazu Inoue, Megumi Iwano, 2014-02-07 This book contains the proceedings of the International Symposium on the Mechanisms of Sexual Reproduction in Animals and Plants, where many plant and animal reproductive biologists gathered to discuss their recent progress in investigating the shared mechanisms and factors involved in sexual reproduction. This now is the first book that reviews recent progress in almost all fields of plant and animal fertilization. It was recently reported that the self-sterile mechanism of a hermaphroditic marine invertebrate (ascidian) is very similar to the self-incompatibility system in flowering plants. It was also found that a male factor expressed in the sperm cells of flowering plants is involved in gamete fusion not only of plants but also of animals and parasites. These discoveries have led to the consideration that the core mechanisms or factors involved in sexual reproduction may be shared by animals, plants and unicellular organisms. This valuable book is highly useful for reproductive biologists as well as for biological scientists outside this field in understanding the current progress of reproductive biology.

**Soundscape Ecology** Almo Farina, 2013-10-28 Soundscape Ecology represents a new branch of ecology and it is the result of the integration of different disciplines like Landscape ecology, Bioacoustics, Acoustic ecology, Biosemiotics, etc. The soundscape that is the object of this discipline, is defined as the acoustic context resulting from natural and human originated sounds and it is considered a relevant environmental proxy for animal and human life. With Soundscape Ecology Almo Farina means to offer a new cultural tool to investigate a partially explored component of the environmental complexity. For this he intends to set the principles of this new discipline, to delineate the epistemic domain in which to develop new ideas and theories and to describe the necessary integration with all the other ecological/environmental disciplines. The book is organized in ten chapters. The first two chapters delineate principles and theory of soundscape ecology. Chapters three and four describe the bioacoustic and communication theories. Chapter five is devoted to the human dimension of soundscape. Chapters six to eight regard the major sonic patterns like noise, choruses and vibrations. Chapter nine is devoted to the methods in soundscape ecology and finally chapter ten describes the application of the soundscape analysis.

**Clinical Xenotransplantation** David K. C. Cooper, Guerard Byrne, 2020-09-08 This title provides an illuminating examination of the current state of xenotransplantation – grafting or transplanting organs or tissues between members of different species – and how it might move forward into the clinic. To be sure, this is a critical topic, as a major problem that remains worldwide is an inadequate supply of organs from deceased human donors,

severely limiting the number of organ transplants that can be performed each year. Based on presentations given at a major conference on xenotransplantation, this title includes important views from many leading experts who were invited to present their data and opinions on how xenotransplantation can advance into the clinic. Attention was concentrated on pig kidney and heart transplantation as it is in regard to these organs that most progress has been made. Collectively, these chapters effectively highlight the many advantages of xenotransplantation to patients with end-stage organ failure, thereby encouraging the mapping of a concrete pathway to clinical xenotransplantation. The book is organized across 22 chapters, beginning with background information on clinical and experimental xenotransplantation. Following this are discussions addressing how pigs can be genetically engineered for their organs to be resistant to the human immune response through deletion of pig xenoantigens, and the insertion of 'protective' human transgenes. Subsequent chapters analyze complications that arise in practice, comparing allotransplant and xenotransplant rejection. The selection of the ideal patients for the first clinical trials is discussed. Finally, the book concludes with an analysis on the regulatory, economic, and social aspects of this research, including FDA perspectives and the sensitive, psychosocial factors regarding allotransplantation and xenotransplantation. A major and timely addition to the literature, Clinical Xenotransplantation will be of great interest to all researchers, physicians, and academics from other disciplines with an interest in xenotransplantation.
