Animals' Influence on the Landscape and Ecological Importance Friedrich-Karl Holtmeier, 2014-10-22 In its first English-language edition, this book introduces the many-faceted interactions of animal populations with their habitats. From soil fauna, ants and termites to small and large herbivores, burrowing mammals and birds, the author presents a comprehensive analysis of animals and ecosystems that is as broad and varied as all nature. Chapter 2 addresses the functional role of animals in landscape ecosystems, emphasizing fluxes of energy and matter within and between ecosystems, and the effects of animals on qualitative and structural habitat change. Discussion includes chapters on the role of animal population density and the impacts of native herbivores on vegetation and habitats from the tropics to the polar regions. Cyclic mass outbreaks of species such as the larch bud moth in Switzerland, the mountain pine beetle and the African red-billed weaver bird are described and analyzed. Other chapters discuss Zoochory – the dispersal of seeds by ants, mammals and birds – and the influence of burrowing animals on soil development and geomorphology. Consideration extends to the impact of feral domestic animals. Chapter 5 focuses on problems resulting from introduction of alien animals and from re-introduction of animal species to their original habitats, discusses the effects on ecosystems of burrowing, digging and trampling by animals. The author also addresses keystone species such as

kangaroo rats, termites and beavers. Chapter 6 addresses the role of animals in landscape management and nature conservation, with chapters on the impact of newcomer species such as animals introduced into Australia, New Zealand and Europe, and the consequences of reintroduction of species to original habitat. It also discusses the carrying capacity of natural habitat, public attitudes toward conservation and more. The final section ponders the effects of climate on interactions between animals and their habitats.

Andrea Fraser Andrea Fraser, Rhea Anastas, Alejandro Cesarco, 2019 This publication is a substantial archive and a singular point of entry into thinking with and understanding Andrea Fraser's work and reception. The interview format provides intimate insight into Fraser's self-positioning as a central aspect of her practice. By presenting the artist's voice as mediated through interlocutors ranging from professional peers to popular media, 'Collected Interviews, 1990-2018' uniquely contextualizes Fraser's practice in the artistic, institutional, and discursive fields in which she intervenes. As Fraser is engaged, challenged, and understood from diverse perspectives, readers learn as much about her artistic commitments from the artist's humor and affect as from her incisive analyses. The collection spans three decades, from the early 1990s to the present, and is organized chronologically with minimal editing. The collection's unmediated format allows Fraser's key ideas and themes to attain deeper resonance through repetitions and subtle differentiations over multiple conversations.

The Ultimate Motor John Parker,2011-08 In history, there have been people who have invented machines that would have and should have changed the course of history. Sidney is one of those people. Because of the inventions he developed as an electrical engineer, Sidney is able to found a security company that is the darling of the industry. With success came the ability to pursue his childhood dreams, and Sidney loves race cars. He hires a bright and promising young driver named Ricky, and he quickly decides to groom Ricky to help him market a new invention: The Ultimate Motor. He knows that there will be forces that will fight his efforts to get his motor to market. But he has a plan to market the motor to small specific groups of people who can easily afford to pay any price for a motor that produces plenty of horsepower

and uses no source of fuel. This industry-changing design features an electromagnetic turbine that produces 500 horsepower and a whole new set of performance characteristics that the internal combustion simply does not have the capability to deliver. The only thing that stands between Sidney and unlimited success is a powerful consortium of ruthless people madmen who will stop at nothing to keep his new design from going to market.

Advanced Mechanics of Composite Materials Valery Vasiliev, Evgeny V. Morozov, 2007-05-16 Composite materials have been representing most significant breakthroughs in various industrial applications, particularly in aerospace structures, during the past thirty five years. The primary goal of Advanced Mechanics of Composite Materials is the combined presentation of advanced mechanics, manufacturing technology, and analysis of composite materials. This approach lets the engineer take into account the essential mechanical properties of the material itself and special features of practical implementation, including manufacturing technology, experimental results, and design characteristics. Giving complete coverage of the topic: from basics and fundamentals to the advanced analysis including practical design and engineering applications. At the same time including a detailed and comprehensive coverage of the contemporary theoretical models at the micro- and macro- levels of material structure, practical methods and approaches, experimental results, and optimisation of composite material properties and component performance. The authors present the results of more than 30 year practical experience in the field of design and analysis of

composite materials and structures. * Eight chapters progressively covering all structural levels of composite materials from their components through elementary plies and layers to laminates * Detailed presentation of advanced mechanics of composite materials * Emphasis on nonlinear material models (elasticity, plasticity, creep) and structural nonlinearity

Sheep Machine Vi Khi Nao, 2018 Poetry. Asian & Asian American Studies. Film. SHEEP MACHINE is a textual inscape, a poetically painted nonfictional pasture where mechanical violence and visceral fear coalesce into a kind of science prosody, a post-human panorama whose beauty lies in the ruins of reality it depicts. Influenced by Leslie Thornton's film of sheep feeding in a field as a conveyor belt of cable cars ascend and return from a mountain in the Swiss Alps, Vi Khi Nao takes perception into tumultuous terrains, into a pastoral-celestial void in which temporality is transcended, progress is a bourgeois invention, and god is a liability for our life spent in hunger and grazing. Vi Khi Nao's SHEEP MACHINE is grace said at the ontological last supper.

Aluminum-Lithium Alloys N Eswara Prasad, Amol Gokhale, R.J.H Wanhill, 2013-09-20 Because lithium is the least dense elemental metal, materials scientists and engineers have been working for decades to develop a commercially viable aluminum-lithium (Al-Li) alloy that would be even lighter and stiffer than other aluminum alloys. The first two generations of Al-Li alloys tended to suffer from several problems, including poor ductility and fracture toughness; unreliable properties, fatigue and fracture resistance; and unreliable corrosion resistance. Now, new third generation Al-Li alloys with significantly reduced lithium content and other improvements are promising a revival for Al-Li applications in modern aircraft and aerospace vehicles. Over the last few years, these newer Al-Li alloys have attracted increasing global interest for widespread applications in the aerospace industry largely because of soaring fuel costs and the development of a new generation of civil and military aircraft. This contributed book, featuring many of the top researchers in the field, is the first up-to-date international reference for Al-Li material research, alloy development, structural design and aerospace systems engineering. Provides a complete treatment of the new generation of low-density AL-Li alloys, including microstructure, mechanical behavior, processing and applications Covers the history of earlier generation AL-Li alloys, their basic problems, why they were never widely used, and why the new third generation Al-Li alloys could

eventually replace not only traditional aluminum alloys but more expensive composite materials. Contains two full chapters devoted to applications in the aircraft and aerospace fields, where the lighter, stronger Al-Li alloys mean better performing, more fuel-efficient aircraft.

Artistic Migration Aline Coelho Sanches, 2024-03-29 Artistic Migration: Reframing Post-War Italian Art, Architecture, and Design in Brazil investigates a selection of works by Italian artists and architects, and an art critic and dealer, who immigrated to Brazil after World War II, and were involved in the first activities and opportunities created by the São Paulo Museum of Art (MASP). Although foreigners, these experts, namely Bramante Buffoni, Roberto Sambonet, Lina Bo Bardi, Giancarlo Piretti, and Pietro Maria Bardi, were engaged in the construction of paths for Brazilian art, architecture, and design, in production marked by the intertwining of artistic disciplines. By examining the works produced between 1946 and 1991, and focusing on the relationship between art and architecture, with previously unexplored cases, the text investigates how these actors engaged in the dilemmas of Brazilian culture and became part of its invention. The

intention is to understand the nature and meaning of this recognizable experience, the continuities of and ruptures from modern architectural, art and design ideals, pre-war experience, and immigration, illuminating a complex framework of relationships with local ideas. The approach and the extensive archival research in Italy and Brazil adopted for the book sheds new light on critically rethinking and reframing Italian and Brazilian cultural events, and will be of interest to architects, researchers, teachers, and students interested in the history of architecture, museums, design, and art.
