Look for O'Brien's new book, *American Fantastica*, on sale October 24th A classic work of American literature that has not stopped changing minds and lives since it burst onto the literary scene, *The Things They Carried* is a ground-breaking meditation on war, memory, imagination, and the redemptive power of storytelling. *The Things They Carried* depicts the men of Alpha Company: Jimmy Cross, Henry Dobbins, Rat Kiley, Mitchell Sanders, Norman Bowker, Kiowa, and the character Tim O'Brien, who has survived his tour in Vietnam to become a father and writer at the age of forty-three. **Hiroshima** John Hersey, 2020-06-23 Hiroshima is the story of six people—a clerk, a widowed seamstress, a physician, a Methodist minister, a young surgeon, and a German Catholic priest—who lived through the greatest single manmade disaster in history. In vivid and indelible prose, Pulitzer Prize-winner John Hersey traces the stories of these half-dozen individuals from 8:15 a.m. on August 6, 1945, when Hiroshima was destroyed by the first atomic bomb ever dropped on a city, through the hours and days that followed. Almost four decades after the original publication of this celebrated book, Hersey went back to Hiroshima in search of the people whose stories he had told, and his account of what he discovered is now the eloquent and moving final chapter of Hiroshima.

Sand Talk Tyson Yunkaporta, 2020-05-12 A paradigm-shifting book in the vein of *Sapiens* that brings a crucial Indigenous perspective to historical and cultural issues of history, education, money, power, and sustainability—and offers a new template for living. As an indigenous person, Tyson Yunkaporta looks at global systems from a unique perspective, one tied to the natural and spiritual world. In considering how contemporary life diverges from the pattern of creation, he raises important questions. How does this affect us? How can we do things differently? In this thoughtful, culturally rich, mind-expanding book, he provides answers. Yunkaporta's writing process begins with images. Honoring indigenous traditions, he makes carvings of what he wants to say, channeling his thoughts through symbols and diagrams rather than words. He yarns with people, looking for ways to connect images and stories with place and relationship to create a coherent world view, and he uses sand talk, the Aboriginal custom of drawing images on the ground to convey knowledge. In *Sand Talk*, he provides a new model for our everyday lives. Rich in ideas and inspiration, it explains how lines and symbols and shapes can help us make sense of the world. It's about how we learn and how we remember. It's about talking to everyone and listening carefully. It's about finding different ways to look at things. Most of all it's about a very special way of thinking, of learning to see

from a native perspective, one that is spiritually and physically tied to the earth around us, and how it can save our world. Sand Talk include 22 black-and-white illustrations that add depth to the text.

Merchants of Doubt Naomi Oreskes,Erik M.

Conway,2011-10-03 The U.S. scientific community has long led the world in research on such areas as public health, environmental science, and issues affecting quality of life. These scientists have produced landmark studies on the dangers of DDT, tobacco smoke, acid rain, and global warming. But at the same time, a small yet potent subset of this community leads the world in vehement denial of these dangers. Merchants of Doubt tells the story of how a loose-knit group of high-level scientists and scientific advisers, with deep connections in politics and industry, ran effective campaigns to mislead the public and deny well-established scientific knowledge over four decades. Remarkably, the same individuals surface repeatedly-some of the same figures who have claimed that the science of global warming is not settled denied the truth of studies linking smoking to lung cancer, coal smoke to acid rain, and CFCs to the ozone hole. Doubt is our product, wrote one tobacco executive. These experts supplied it. Naomi Oreskes and Erik M. Conway, historians of science, roll back the rug on this dark corner of the American scientific community, showing how ideology and corporate interests, aided by a too-compliant media, have skewed public understanding of some of the most pressing issues of our era.

**A Vast Machine** Paul N. Edwards,2013-02-08 The science behind global warming, and its history: how scientists learned to understand the atmosphere, to measure it, to trace its past, and to model its future. Global warming skeptics often fall back on the argument that the scientific case for global warming is all model predictions, nothing but simulation; they warn us that we need to wait for real data, “sound science.” In *A Vast Machine* Paul Edwards has news for these skeptics: without models, there are no data. Today, no collection of signals or observations—even from satellites, which can “see” the whole planet with a single instrument—becomes global in time and space without passing through a series of data models. Everything we know about the world's climate we know through models. Edwards offers an engaging and innovative history of how scientists learned to understand the atmosphere—to measure it, trace its past, and model its future.

**USS Franklin CV-13 War Damage Report** U. S. Navy Department Staff,Us Navy,2013-12-16 USS Franklin CV-13 ...also known as the ship that would not die. 1-1This is a long report. An effort has been made to present a comprehensive summation of the many design and damage control problems which were disclosed or emphasized by the war experiences of Franklin. In addition, various pertinent war experiences of other large carriers have been considered in this report. 1-2The damage sustained by Franklin as a result of the actions of 13 and 15 October 1944 was superficial and is included in this report only for the purpose of rendering her damage history complete.

The major damage sustained in each of the actions of 30 October 1944 and 19 March 1945 demonstrates the effectiveness of bomb hits when received by aircraft carriers during the extremely vulnerable period just prior to and during periods of launching strikes. The damage sustained on 30 October is a reasonably good example of what may be expected from a suicide plane crash and subsequent fire on a carrier having a full complement of planes on board which are gassed but not armed except for small caliber ammunition. Similarly, the damage sustained on 19 March may be considered as about the maximum to be expected from fires and detonations of large numbers of bombs and rockets on the flight and hangar decks when a carrier having heavily armed, fully fueled planes aboard is hit by one or more bombs properly placed. 1-3The latter two cases of damage to Franklin illustrate thoroughly the ability of modern U.S. aircraft carriers to survive extensive damage from plane crashes, fire and heavy bombs. The basic design and construction of this class of carrier, which was developed prior to World War II and therefore without the benefit of war experience, is favorably reflected in the manner in which Franklin absorbed heavy damage. Materiel alterations and improvements in damage control organization and technique during the war further increased the ability of this class carrier to minimize potentially severe damage. At the same time many lessons have been obtained from the experiences of Franklin and other cases of war damage and results of this knowledge have been and will be incorporated in existing ships where feasible and in future design and construction. 1-4This report is based on the references, inspections of Franklin upon her return to this country, and informal interviews with various officers attached to Franklin by representatives of this Bureau.

The Medical Implications of Nuclear War Fred Solomon, Robert Q. Marston, Lewis Thomas, Steering Committee for the Symposium on the Medical Implications of Nuclear War, Institute of Medicine, 1986-01-15 Written by world-renowned scientists, this volume portrays the possible direct and indirect devastation of human health from a nuclear attack. The most comprehensive work yet produced on this subject, *The Medical Implications of Nuclear War* includes an overview of the potential environmental and physical effects of nuclear bombardment, describes the problems of choosing who among the injured would get the scarce medical care available, addresses the nuclear arms race from a psychosocial perspective, and reviews the medical needs--in contrast to the medical resources likely to be available--after a nuclear attack. It should serve as the definitive statement on the consequences of nuclear war.--Arms Control Today
