Intelligent Transportation Related Complex Systems and Sensors Kyandoghere Kyamakya, Jean Chamberlain Chedjou, Fadi Al-Machot, Ahmad Haj Mosa, Antoine Bagula, 2021-09-01 Building around innovative services related to different modes of transport and traffic management, intelligent transport systems (ITS) are being widely adopted worldwide to improve the efficiency and safety of the transportation system. They enable users to be better informed and make safer, more coordinated, and smarter decisions on the use of transport networks. Current ITSs are complex systems, made up of several components/sub-systems characterized by time-dependent interactions among themselves. Some examples of these transportation-related complex systems include: road traffic sensors, autonomous/automated cars, smart cities, smart sensors, virtual sensors, traffic control systems, smart roads, logistics systems, smart mobility systems, and many others that are emerging from niche areas. The efficient operation of these complex systems requires: i) efficient solutions to the issues of sensors/actuators used to capture and control the physical parameters of these systems, as well as the quality of data collected from these systems; ii) tackling complexities using simulations and analytical modelling techniques; and iii) applying optimization techniques to improve the performance of these systems.

Electronics for Sensors Giuseppe Ferri, Gianluca Barile, Alfiero Leoni, 2021-08-16 The aim of this Special Issue is to explore new advanced solutions in electronic systems and interfaces to be employed in sensors, describing best practices, implementations, and applications. The selected papers in particular concern photomultiplier tubes (PMTs) and silicon photomultipliers (SiPMs) interfaces and applications, techniques for monitoring radiation levels, electronics for biomedical applications, design and applications of time-to-digital converters, interfaces for image sensors, and general-purpose theory and topologies for electronic interfaces.

Sensors Fault Diagnosis Trends and Applications Piotr Witczak, 2021-09-01 Fault diagnosis has always been a concern for industry. In general, diagnosis in complex systems requires the

acquisition of information from sensors and the processing and extracting of required features for the classification or identification of faults. Therefore, fault diagnosis of sensors is clearly important as faulty information from a sensor may lead to misleading conclusions about the whole system. As engineering systems grow in size and complexity, it becomes more and more important to diagnose faulty behavior before it can lead to total failure. In the light of above issues, this book is dedicated to trends and applications in modern-sensor fault diagnosis.

A History of Writing in Japan Christopher Seeley, 2023-11-20 This book deals chronologically with the history of writing in Japan, a subject which spans a period of 2,000 years, beginning with the transmission of writing from China in about the first or second century AD, and concluding with the use of written Japanese with computers. Environmental Health Literacy Symma Finn, Liam R. O'Fallon, 2018-09-12 This book explores various and distinct aspects of environmental health literacy (EHL) from the perspective of investigators working in this emerging field and their community partners in research. Chapters aim to distinguish EHL from health literacy and environmental health education in order to classify it as a unique field with its own purposes and outcomes. Contributions in this book represent the key aspects of communication, dissemination and implementation, and social scientific research related to environmental health sciences and the range of expertise and interest in EHL. Readers will learn about the conceptual framework and underlying philosophical tenets of EHL, and its relation to health literacy and communications research. Special attention is given to topics like dissemination and implementation of culturally relevant environmental risk messaging, and promotion of EHL through visual technologies. Authoritative entries by experts also focus on important approaches to advancing EHL through community-engaged research and by engaging teachers and students at an early age through developing innovative STEM curriculum. The significance of theater is highlighted by describing the use of an interactive theater experience as an approach that enables community residents to express themselves in non-verbal ways.

Stumbling Giant Timothy Beardson, 2013-05-21 "A thoughtful reconsideration of China's actual place in the new world order, based on reality rather than fanciful speculation." —Kirkus Reviews Can anything prevent China surpassing the United States and becoming the world's top superpower? While predictions that China's rise to global supremacy is a near-certainty have resulted in this belief becoming almost conventional wisdom, this book boldly counters such widely held assumptions. Investment strategist Timothy Beardson brings to light the daunting array of challenges that today confront China, as well as the inadequacy of the policy responses. Threats to China come on many fronts, Beardson shows, and by their number and sheer weight these problems will thwart any ambition to become the world's "Number One power." Drawing on extensive research and experience living and working in Asia over the last 35 years, the author spells out China's situation: an inexorable demographic future of a shrinking labor force, relentless aging, extreme gender disparity, and even a falling population. Also, the nation faces social instability, a devastated environment, a predominantly low-tech economy with inadequate innovation, the absence of an effective welfare safety net, an ossified governance structure, and radical Islam lurking at the borders. Beardson's nuanced, firsthand

look at China acknowledges its historic achievements while tempering predictions of its imminent hegemony with a no-nonsense dose of reality.
