The Dragon and the Dazzle Marco Pellitteri, Jean-Marie Bouissou, Gianluca Di Fratta, Cristiano Martorella, Bounthavy Suvilay, 2010 In the worldwide circulation of the products of cultural industries, an important role is played by Japanese popular culture in European contexts. Marco Pellitteri shows that the contact between Japanese pop culture and European youth publics occurred during two phases. By use of metaphor, the author calls them the Dragon and the Dazzle. The first took place between 1975 and 1995, the second from 1996 to today. They can be distinguished by the modalities of circulation and consumption/re-elaboration of Japanese themes and products in the most receptive countries: Italy, France, Spain, Germany and, across the ocean, the United States. During these two phases, several themes have been perceived, in Europe, as rising from Japan's social and mediatic systems. Among them, this book examines the most apparent from a European point of view: the author names them machine, infant, and mutation, visible mostly through manga, anime, videogames, and toys. Together with France, Italy is the European country that in this respect has had the most central role. There, Japanese imagination has been acknowledged not only by young people, but also by politicians, television programmers, the general public, educators, comics and cartoons authors. The growing influence of Japanese pop culture, connected to the appreciation of its manga, anime, toys, and videogames, also urges political and mediologic questions linked to the identity/ies of Japan as they are understood--wrongly or rightly--in Europe and the West, and to the increasingly important role of Japan in international relations.--Back cover

The Ethics of Affect Patrick W. Galbraith, 2021-09-20
Based on ongoing fieldwork in the Akihabara neighborhood

of Tokyo, specifically a targeted subproject from 2014 to 2015, this book explores how and to what effect lines are drawn by producers, players and critics of bishōjo games. Focusing on interactions with manga/anime-style characters, these adult computer games often feature explicit sex acts. Noting that the bishōjo, or cute girl characters, in these games can appear quite young, legal actions have been taken in a number of countries to categorize and prohibit the content as child abuse material. In response to the risk of manga/anime images encouraging underage sexualization, lawmakers are moved to regulate them in the same way as photographs or film; triggered by images, the line between fiction and reality is erased, or redrawn to collapse forms together. While Japanese politicians continue to debate a similar course, sustained engagement with bishōjo game producers, players and critics sheds light on alternative movement. Manga/anime-style characters trigger an affective response in interactions with their creators and users, who draw and negotiate lines between fiction and reality. Interacting with characters and one another, bishōjo gamers draw lines between what is fictional and what is real, even as the characters are real in their own right and relations with them are extended beyond games; some even see the characters as significant others and refer to them using intimate terms of commitment such as my wife. This book argues for understanding the everyday practice of insisting on lines, or drawing a line between humans and nonhumans and orienting oneself toward the drawn lines of the latter, as demonstrating an emergent form of ethics. Occurring individually and socially in both private and public spaces, the response to fictional characters not only discourages harming human beings, but also supports life in more-than-human worlds. For many in contemporary Japan and

beyond, interactions and relations with fictional and real others are nothing short of lifelines.

Twelve Years a Slave Solomon Northup,2024-01-04
Filmatized in 2013 and the official recipient of three Oscars, Solomon Northup's powerful slave narrative 'Twelve Years a Slave' depicts Nortup's life as he is sold into slavery after having spent 32 years of his life living as a free man in New York. Working as a travelling musician, Northup goes to Washington D.C, where he is kidnapped, sent to New Orleans, and sold to a planter to suffer the relentless and brutal life of a slave. After a dozen years, Northup escapes to return to his family and pulls no punches, as he describes his fate and that of so many other black people at the time. It is a harrowing but vitally important book, even today. For further reading on this subject, try 'Uncle Tom's Cabin' by Harriet Beecher Stowe. Solomon Northup (c.1807-c.1875) was an American abolitionist and writer, best remembered for his powerful race memoir 'Twelve Years a Slave'. At the age of 32, when he was a married farmer, father-of-three, violinist and free-born man, he was kidnapped in Washington D.C and shipped to New Orleans, sold to a planter and enslaved for a dozen years. When he gained his freedom, he wrote his famous memoir and spent some years lecturing across the US,on behalf of the abolitionist movement. 'Twelve Years a Slave' was published a year after 'Uncle Tom's Cabin' by Harriet Beecher Stowe and built on the anti-slavery momentum it had developed. Northup's final years are something of a mystery, though it is thought that he struggled to cope with family life after being freed.

Understanding Intelligence Rolf Pfeifer,Christian Scheier,2001-07-27 The book includes all the background material required to understand the principles underlying intelligence, as well as enough detailed information on

intelligent robotics and simulated agents so readers can begin experiments and projects on their own. By the mid-1980s researchers from artificial intelligence, computer science, brain and cognitive science, and psychology realized that the idea of computers as intelligent machines was inappropriate. The brain does not run programs; it does something entirely different. But what? Evolutionary theory says that the brain has evolved not to do mathematical proofs but to control our behavior, to ensure our survival. Researchers now agree that intelligence always manifests itself in behavior—thus it is behavior that we must understand. An exciting new field has grown around the study of behavior-based intelligence, also known as embodied cognitive science, new AI, and behavior-based AI. This book provides a systematic introduction to this new way of thinking. After discussing concepts and approaches such as subsumption architecture, Braitenberg vehicles, evolutionary robotics, artificial life, self-organization, and learning, the authors derive a set of principles and a coherent framework for the study of naturally and artificially intelligent systems, or autonomous agents. This framework is based on a synthetic methodology whose goal is understanding by designing and building. The book includes all the background material required to understand the principles underlying intelligence, as well as enough detailed information on intelligent robotics and simulated agents so readers can begin experiments and projects on their own. The reader is guided through a series of case studies that illustrate the design principles of embodied cognitive science.

Robo Sapiens Japonicus Jennifer Robertson, 2018 Japan is arguably the first postindustrial society to embrace the prospect of human-robot coexistence. Over the past decade, Japanese humanoid robots designed for use in

homes, hospitals, offices, and schools have become celebrated in mass and social media throughout the world. In *Robo sapiens japonicus*, Jennifer Robertson casts a critical eye on press releases and public relations videos that misrepresent robots as being as versatile and agile as their science fiction counterparts. An ethnography and sociocultural history of governmental and academic discourse of human-robot relations in Japan, this book explores how actual robots—humanoids, androids, and animaloids—are “imagineered” in ways that reinforce the conventional sex/gender system and political-economic status quo. In addition, Robertson interrogates the notion of human exceptionalism as she considers whether “civil rights” should be granted to robots. Similarly, she juxtaposes how robots and robotic exoskeletons reinforce a conception of the “normal” body with a deconstruction of the much-invoked Theory of the Uncanny Valley.

The Global Exploration Roadmap Isecg,2013-10-24
Agencies participating in the International Space Exploration Coordination Group (ISECG) continue to advance a long-range international exploration strategy that begins with the International Space Station (ISS) and expands human presence in the solar system, leading ultimately to human missions to explore the surface of Mars. The Global Exploration Roadmap, first released in September 2011, has been updated in August 2013 to reflect updated agency plans and programmes as well as continue to facilitate stakeholder engagement in the effort to chart an international roadmap to Mars. FurScience! Courtney N. Plante, Stephen Reysen, Sharon E. Roberts, Kathleen C. Gerbasi, 2016-06-01
The International Anthropomorphic Research Project is a group of social scientists conducting research to gain a

better understanding of the furry fandom. In the present book we present the main findings from a variety of studies, including more than 10,000 furry participants, over the past five years. The book seeks to answer questions often asked about furies, such as what is a furry? Do furies really think they're animals? Is it true that all furies wear fursuits? Whether you've never heard of furies before or you've been a furry for decades, you're sure to learn something from this book.

Microbial Limit and Bioburden Tests Lucia

Clontz, 2008-10-14 In recent years, the field of pharmaceutical microbiology has experienced numerous technological advances, accompanied by the publication of new and harmonized compendial methods. It is therefore imperative for those who are responsible for monitoring the microbial quality of pharmaceutical/biopharmaceutical products to keep abreast of the latest changes. *Microbial Limit and Bioburden Tests: Validation Approaches and Global Requirements* guides readers through the various microbiological methods listed in the compendia with easy-to-follow diagrams and approaches to validations of such test methodologies. Includes New and Updated Material Now in its second edition, this work is the culmination of research and discussions with technical experts, as well as USP and FDA representatives on various topics of interest to the pharmaceutical microbiologist and those responsible for the microbial quality of products, materials, equipment, and manufacturing facilities. New in this edition is an entire chapter dedicated to the topic of biofilms and their impact on pharmaceutical and biopharmaceutical operations. The subject of rapid methods in microbiology has been expanded and includes a discussion on the validation of alternative microbiological methods and a case study on microbial identification in support of a product

contamination investigation. Substantially updated and revised, this book assists readers in understanding the fundamental issues associated with pharmaceutical microbiology and provides them with tools to create effective microbial contamination control and microbial testing programs for the areas under their responsibility.

A History of Writing in Japan Christopher Seeley,2023-11-20 This book deals chronologically with the history of writing in Japan, a subject which spans a period of 2,000 years, beginning with the transmission of writing from China in about the first or second century AD, and concluding with the use of written Japanese with computers. Topics dealt with include the adoption of Chinese writing and its subsequent adaptation in Japan, forms of writing employed in works such as the Kojiki and Man'yōshū, development of the kana syllabaries, evolution of mixed character-kana orthography, historical kana usage, the rise of literacy during the Edo period, and the main changes that have taken place in written Japanese in the modern period (ca. 1868 onwards). This is the first full-length work in a European language to provide the Western reader with an overall account of the subject concerned, based on extensive examination of both primary and secondary materials.

Technoscientific Imaginaries George E. Marcus,1995-04 What is it like to be a scientist at the end of the twentieth century? How have shifts in power and in assumptions about knowledge affected scientific practice? Who are the people behind the new technologies, and how do they address the difficult moral and professional issues during a time of global change? *Techno-Scientific Imaginaries* explores these and other important questions

at the approach of the new millennium. In these penetrating essays, twenty-four distinguished contributors from a broad range of fields present the voices of the scientists themselves—through interviews, conversations, and memoirs. We hear from Lithuanian physicists who discuss science after Communism and their own fantasies about what Western science is; a Japanese-American woman struggling with her ambivalence over designing nuclear weapons; political activists in India who examine relations among science, environmental politics, and government ideology in the aftermath of the Bhopal disaster; and many others, including biologists, physicians, corporate researchers, and scientists working with virtual reality and other cutting-edge technologies. The contributors to this volume are Mario Biagioli, Maria E. Carson, Gary Lee Downey, Joseph Dumit, Michael M. J. Fischer, Mary-Jo DelVecchio Good, Hugh Gusterson, Diana L. L. Hill, James Holston, Herbert C. Hoover, Jr., Gudrun Klein, Leszek Koczanowicz, Irene Kuter, Kim Laughlin, Rita Linggood, George E. Marcus, Kathryn Milun, Livia Polanyi, Christopher Pound, Simon Powell, Paul Rabinow, Kathleen Stewart, Allucquere Rosanne Stone, and Sharon Traweek.

How the Body Shapes the Way We Think Rolf Pfeifer, Josh Bongard, 2006-10-27 An exploration of embodied intelligence and its implications points toward a theory of intelligence in general; with case studies of intelligent systems in ubiquitous computing, business and management, human memory, and robotics. How could the body influence our thinking when it seems obvious that the brain controls the body? In *How the Body Shapes the Way We Think*, Rolf Pfeifer and Josh Bongard demonstrate that thought is not independent of the body but is tightly constrained, and at the same time enabled, by it. They argue that the kinds of thoughts we are capable of have

their foundation in our embodiment—in our morphology and the material properties of our bodies. This crucial notion of embodiment underlies fundamental changes in the field of artificial intelligence over the past two decades, and Pfeifer and Bongard use the basic methodology of artificial intelligence—understanding by building—to describe their insights. If we understand how to design and build intelligent systems, they reason, we will better understand intelligence in general. In accessible, nontechnical language, and using many examples, they introduce the basic concepts by building on recent developments in robotics, biology, neuroscience, and psychology to outline a possible theory of intelligence. They illustrate applications of such a theory in ubiquitous computing, business and management, and the psychology of human memory. Embodied intelligence, as described by Pfeifer and Bongard, has important implications for our understanding of both natural and artificial intelligence.

The Closed World Paul N. Edwards, 1996 The Closed World offers a radically new alternative to the canonical histories of computers and cognitive science. Arguing that we can make sense of computers as tools only when we simultaneously grasp their roles as metaphors and political icons, Paul Edwards shows how Cold War social and cultural contexts shaped emerging computer technology--and were transformed, in turn, by information machines. The Closed World explores three apparently disparate histories--the

history of American global power, the history of computing machines, and the history of subjectivity in science and culture--through the lens of the American political imagination. In the process, it reveals intimate links between the military projects of the Cold War, the evolution of digital computers, and the origins of cybernetics, cognitive psychology, and artificial intelligence. Edwards begins by describing the emergence of a closed-world discourse of global surveillance and control through high-technology military power. The Cold War political goal of containment led to the SAGE continental air defense system, Rand Corporation studies of nuclear strategy, and the advanced technologies of the Vietnam War. These and other centralized, computerized military command and control projects--for containing world-scale conflicts--helped closed-world discourse dominate Cold War political decisions. Their apotheosis was the Reagan-era plan for a Star Wars space-based ballistic missile defense. Edwards then shows how these military projects helped computers become axial metaphors in psychological theory. Analyzing the Macy Conferences on cybernetics, the Harvard Psycho-Acoustic Laboratory, and the early history of artificial intelligence, he describes the formation of a cyborg discourse. By constructing both human minds and artificial intelligences as information machines, cyborg discourse assisted in integrating people into the hyper-complex technological systems of the closed world. Finally, Edwards explores the cyborg as political identity in science fiction--from the disembodied, panoptic AI of 2001: A Space Odyssey, to the mechanical robots of Star Wars and the engineered biological androids of Blade Runner--where Information Age culture and subjectivity were both reflected and constructed. Reproducing the Future Marilyn Strathern, 1992 These

essays, written at the time when the Bill for Human Fertilization and Embryology Act (1990) was going through Parliament, touch on the British debate (on in vitro fertilization, gamete donation and maternal surrogacy) from an anthropological perspective. The implications of the medical developments that lay behind the Act are world-wide and these new procreative possibilities formulate new possibilities for thinking about kinship. The essays are informed by recent re-thinking of models of kinship in Melanesia.

The Cambridge Companion to Literature and Science Steven Meyer, 2018-05-03 In 1959, C. P. Snow lamented the presence of what he called the 'two cultures': the apparently unbridgeable chasm of understanding and knowledge between modern literature and modern science. In recent decades, scholars have worked diligently and often with great ingenuity to interrogate claims like Snow's that represent twentieth- and twenty-first-century literature and science as radically alienated from each other. The Cambridge Companion to Literature and Science offers a roadmap to developments that have contributed to the demonstration and emergence of reciprocal connections between the two domains of inquiry. Weaving together theory and empiricism, individual chapters explore major figures - Shakespeare, Bacon, Emerson, Darwin, Henry James, William James, Whitehead, Einstein, Empson, and McClintock; major genres and modes of writing - fiction, science fiction, non-fiction prose, poetry, and dramatic works; and major theories and movements - pragmatism, critical theory, science studies, cognitive science, ecocriticism, cultural studies, affect theory, digital humanities, and expanded empiricisms. This book will be a key resource for scholars, graduate students, and undergraduate students alike.

Postmodernism and Japan 田中新一,Harry Harootunian,1989-07-27 Postmodernism and Japan is a coherent yet diverse study of the dynamics of postmodernism, as described by Lyotard, Baudrillard, Deleuze, and Guatarri, from the often startling perspective of a society bent on transforming itself into the image of Western “enlightenment” wealth and power. This work provides a unique view of a society in transition and confronting, like its models in the West, the problems induced by the introduction of new forms of knowledge, modes of production, and social relationships.
