The Cape Hatteras Lighthouse ,2000 Carr tells the story of the noble lighthouse from its earliest history to details of the 1999 relocation of the treasured landmark. For now, North Carolinians have succeeded in protecting their lighthouse as it has protected thousands of sailors for over a century. 32 halftones. Maps.

Cape Hatteras Lighthouse Mary Ellen Riddle,Douglas Stover,2021-05-03 The Cape Hatteras Lighthouse, standing 198.49 feet, is the tallest brick lighthouse in the United States. From 1803, when the first Cape Hatteras Lighthouse was built, to today, it cast its light over the waters off the Outer Banks of North Carolina, also called the Graveyard of the Atlantic. Its history--stretching from Augustin-Jean Fresnel's lens laboratory in France to the beaches of Hatteras Island where the lighthouse keepers labored--includes war, shipwrecks, hurricanes, and cutting-edge technology. Due to politics, funding, and its precarious location, it took great effort to erect and protect a lighthouse built on a barrier island. The supporters and caretakers were many, including Alexander Hamilton in the 1700s and children donating coins to a statewide preservation campaign in 1982. In the 21st century, the Cape Hatteras Lighthouse continues to send out its beam to mariners.

Who Sees the Lighthouse? Ann Fearrington,2002 In this cumulative rhyme, lighthouses from around the United States are observed by one sailor, two pilots, three gulls, and more.

Managed Realignment : A Viable Long-Term Coastal Management Strategy? Luciana S. Esteves,2014-07-14 Managed realignment has been a preferred coastal management strategy in England in the 21st century and has also been increasingly implemented elsewhere. Climate change and environmental and financial concerns have led to a shift from the traditional 'hold-the-line' approach of coastal protection towards more flexible soft engineering options. Managed realignment is a relatively new soft engineering alternative aiming to provide sustainable flood risk management with added environmental and socio-economic benefits by creating space for coastal habitats to develop more dynamically. The natural adaptive capacity of coastal habitats and the ecosystem services they provide underpin the sustainability of managed realignment. However, many definitions of managed realignment exist and the understanding of what the term actually represents in practice has evolved through time and varies regionally. This book clarifies the definitions and terminology used in the literature and proposes that managed realignment is used as a general term that encompasses the many different methods of implementation worldwide, including: removal, breach and realignment of defences; controlled tidal restoration (which includes regulated tidal exchange and controlled reduced tide); and managed retreat. These methods of implementation are explained and illustrated with examples from around the world. In addition to a general overview of emerging policies and current practices, specific chapters discuss approaches adopted in different locations, including the Netherlands, the UK and Maui (USA). The UK experience is presented from the perspectives of three sectors: the National Trust (a charity organisation that owns 10% of the coastline of England and Wales), the Environment Agency (the organisation responsible for implementing government policy concerning flood and erosion risk) and a private consultant involved in the planning, design and delivery of managed realignment projects. Taking a wider

perspective to consider the range of implementation methods, the viability of managed realignment as a long-term coastal management strategy is discussed. Recent national and regional strategies worldwide give managed realignment an increasing role in climate change and flood risk management. Gaining stakeholders and public support is fundamental for the success of emerging coastal management strategies. However, public perception and stakeholders engagement are often cited as a factor limiting the wider uptake of managed realignment. Results from a recent survey are used to benchmark the current thinking about the potential, the performance and the limitations of managed realignment in the UK and elsewhere. Current opinions about managed realignment are often not clearly defined, partly due to many projects being relatively recent. There is a general perception of great potential to provide sustainable flood risk management with added environmental benefits. However, the views of stakeholders are considerably more negative and notably contrast with the views of practitioners and researchers. The only clear and dominant agreement across all groups of respondents is that better understanding about the long-term evolution of sites is needed.

All The Wild That Remains: Edward Abbey, Wallace Stegner, and the American West David Gessner, 2015-04-20 An homage to the West and to two great writers who set the standard for all who celebrate and defend it. Archetypal wild man Edward Abbey and proper, dedicated Wallace Stegner left their footprints all over the western landscape. Now, award-winning nature writer David Gessner follows the ghosts of these two remarkable writer-environmentalists from Stegner's birthplace in Saskatchewan to the site of Abbey's pilgrimages to Arches National Park in Utah,

braiding their stories and asking how they speak to the lives of all those who care about the West. These two great westerners had very different ideas about what it meant to love the land and try to care for it, and they did so in distinctly different styles. Boozy, lustful, and irascible, Abbey was best known as the author of the novel *The Monkey Wrench Gang* (and also of the classic nature memoir *Desert Solitaire*), famous for spawning the idea of guerrilla actions—known to admirers as monkeywrenching and to law enforcement as domestic terrorism—to disrupt commercial exploitation of western lands. By contrast, Stegner, a buttoned-down, disciplined, faithful family man and devoted professor of creative writing, dedicated himself to working through the system to protect western sites such as Dinosaur National Monument in Colorado. In a region beset by droughts and fires, by fracking and drilling, and by an ever-growing population that seems to be in the process of loving the West to death, Gessner asks: how might these two farseeing environmental thinkers have responded to the crisis? Gessner takes us on an inspiring, entertaining journey as he renews his own commitment to cultivating a meaningful relationship with the wild, confronting American overconsumption, and fighting environmental injustice—all while reawakening the thrill of the words of his two great heroes.
