Seeing Like a Rover Janet Vertesi, 2015-04-22 *Seeing Like a Rover* brings the Mars Exploration Rover mission to vivid life through the author's years of immersion with the team during routine operations on Mars. In the book, Janet Vertesi explores the social and technical achievements of making knowledge about Mars based on iterative digital representations of its surface. We see how scientists on the Rover mission both perform the digital transformations that bring new features in their images to light, enabling discovery, as well as how they collectively interpret images to determine where the Rovers are located on Mars and what they should do next. Using her close study of digital imaging, which exhibits a sensitivity to the social context of scientific work, Vertesi discusses how representation on the mission is never about

finding a single way of truthfully representing Mars. Representation is instead, she argues, a question of using image processing techniques strategically to reveal and conceal different features of the planet's surface, and of bringing these multiple representations together to make both knowledge and collective decisions about exploration on the Red Planet. *Seeing Like a Rover* speaks to many themes that are familiar to historians, sociologists, and philosophers of science. Issues such as trust among knowledge-making teams, the different epistemic status and practices of the lab and the field, and the heritage of visual languages in an emerging discipline are just as relevant in other periods and places. Moreover, by revealing how representational practices craft social visions, Vertesi develops a framework that can be applied to scientific imaging across a variety of time periods and scientific contexts.

Lunar and Planetary Rovers Anthony Young, 2007-07-05 This book fills a need for a complete history of the Lunar Roving Vehicle used on Apollo 15, 16 and 17, drawing on many photographs never before published. It also tells the story of the robotic rovers used on Mars, and concludes with a description of the new designs of rovers planned for The New Vision for Exploration now

underway at NASA. The book provides extensive quotes from the astronauts who drove the LRV on the Moon from interviews conducted especially for the book. It also details new material from interviews of engineers and managers at the Jet Propulsion Laboratory covering the robotic rovers, Sojourner, Spirit and Opportunity.

The Seventh Landing Michael Carroll, 2009-08-15 It's been thirty-five years since people last trod the dusty plains of the Moon. Over the course of six landings from 1969 to 1972, twelve men explored, four-wheeled, dug and hiked across the lunar surface. Now, NASA has plans for a seventh landing on the Moon. This time, they want to stay. NASA's plans, dubbed the Constellation architecture, involve the largest launch vehicle ever built, new types of propulsion, and a six-person vehicle to ferry crews from Earth to the Moon. But NASA's plans go far beyond Luna. Eventually, the lessons learned on the Moon's outpost at Shackleton Crater will teach us how to live—permanently—on the most Earthlike world in our solar system, Mars. NASA will have company: plans for future lunar exploration are being drawn by Europe, Japan, China and India. While specific hardware and mission details will be in flux for some time, the overarching goals, strategies and inspiration for the

seventh landing will not change. This book will choose a typical scenario for getting to the Moon that embraces the spirit of exploration embodied by NASA's Constellation architecture. Each chapter moves from a general description to the specific nuts-and-bolts of engineering and science. The Seventh Landing reveals the very latest strategies for how we'll get to the Moon, what we know today, what we want to find out, and what life will be like at the first true outposts on the Moon and Mars.

Chariots for Apollo Courtney G. Brooks,James M.

Grimwood,Loyd S. Swenson,2012-05-14 This illustrated history by a trio of experts is the definitive reference on the Apollo spacecraft and lunar modules. It traces the vehicles' design, development, and operation in space. More than 100 photographs and illustrations.

Red Rover Roger Wiens,2013-03-12 Covers the development and construction of the Mars rover Curiosity, the most sophisticated vehicle ever sent to the Red Planet.

Inside the Lunar Rover Christopher Riley,David Woods,Phil Dolling,2017-07-15 This comprehensive guide gives insight into the first vehicle ever built to be driven on the surface of another body – the Apollo mission's lunar module. Prefaced by a foreword by the first Apollo astronaut to drive the lunar lander, this title is both a mechanical guide with illustrations and technical drawings and a fascinating narrative of engineering ingenuity and human triumph. It draws on NASA's rich photographic archive and the complete transcripts of the crews' reaction to driving across the moon. With its blend of engineering principles and detailed images, this informative guide will engage space geeks and novices alike.

Mars Robert Godwin,2004 In 1877 the famed Italian astronomer Giovanni Schiaparelli used his brand-new 8.6 inch telescope to study the planets. To his great surprise he suspected

that he saw symmetry on Mars. In the years that followed one astronomer after another looked at the red planet and gradually a mythology was formed -- a mythology of alien intellect. By the 1890's the martial influence had spilled over into all walks of life and sparked philosophical debates and wondrous fictions. Scientists, fantasists and people of all creeds looked up and wondered -- is there life out there? Now, more than a century later, nations around the world are bombarding Mars with an unprecedented fleet of exploratory vehicles. Their journey taking less time than it took Amundsen and Shackleton to reach the poles of Earth, these small but hardy robotic emissaries are thrusting their way through the depths of interplanetary space to take up residence in the barren Martian deserts. Their goal is to answer one of the oldest questions in mankind's history. Is there life out there? In this sequel to the best-selling first volume, the reader is brought up to date with the most recent results from our nearest neighbour. Filled with a wealth of facts about the latest fleet of Martian explorers as well as a look at what may be coming next in mankind's most ambitious quest for knowledge. Includes DVD-V / DVD-ROM featuring: Exclusive interviews with Mars Rover Mission Scientist Steve Squyres, Senior Flight Engineer Rob Manning,

Mission Manager Jim Eriksen, the complete Cornell animation of the Rovers created by Maas Digital, a NASA animation of a proposed Manned Mars mission, the exciting mission control broadcast of the landing of Opportunity in Meridiani Planum and as an added extra special bonus, extremely rare video of Dr Wernher von Braun filmed in 1976 at the occasion of his last public speech about Mars exploration.

Apollo by the Numbers Richard W. Orloff, 2000

NASA APOLLO SPACECRAFT LUNAR E NASA, 2011-09-01

Originally created in 1971 by NASA contractor Grumman, the Apollo Spacecraft News Reference (LEM) was intended to educate members of the media, government, and private sector contractors about one of history's most ambitious undertakings. Within its pages you'll find general information about the Apollo Program, and a detailed examination of the Lunar Excursion Module and crew extra-vehicular activity procedures and equipment. (A companion book that focuses on the CM is also available.) Scores of photos and diagrams accompany the easy-to-understand text. Chapters include: Introduction, Mission Description, Apollo Spacecraft, Lunar Module, Crew Personal Equipment, Environmental Control, Control and Displays, Guidance, Navigation, and Control, Main Propulsion,

Reaction Control, Electrical Power, Communications, Instrumentation, Lighting, Portable Life Support System, Biographies, Grumman Aircraft Corp., Brief History of the LM, LM Manufacturing, Glossary, Contractors, The Moon (chapter written by Richard C. Hoagland), Index, and the LM Anatomy Booklet (reprinted in black and white). It also includes a fascinating chapter about LM Derivatives, showing how variations of the LM could have been built and flown in support of a wide variety of missions. Although it may be one of the most complete studies of the systems and technology that made landing on the Moon possible, it's never been easy to find copies of this text because copies were never widely released -- until now. This reprint is of an edition featuring a mission similar to Apollo 15, 16 or 17, with astronauts performing three 7-hour EVAs using the Lunar Roving Vehicle. It features all the original text, diagrams and photos. It's a wonderful reference for the space flight fan, docent or engineering buff or for anyone else who ever wondered, How'd they do that!

Apollo Shayler David, 2002 The structure of *Apollo - The Lost and Forgotten Missions* follows the development and in flight testing of the Apollo lunar spacecraft prior to Apollo 11 as well as missions planned following that first landing. Drawing upon combinations of archival documentation from the first four manned Apollo missions and future mission plans evolved in the summer of 1969 *Apollo - The Lost and Forgotten Missions* will fill this void. The text explains how the machines and the men were prepared for the landing on the moon and what would have followed the initial landings.
